

Anthony Rieth is a biological science technician in the Aquatic Invasive Species Early Detection and Monitoring Program (AIS). He has been employed with the AIS program since May of 2013. Primary tasks include sampling Lake Michigan river and port “hotspots” for new invasive species using environmental DNA and traditional gears; additional tasks focus on serving the needs of all programs of the office and include chemical and waste management and being a trainer for the Motorboat Operator Certification Course. Public outreach is also a favorite part of the job. Rieth is a graduate of the University of Wisconsin – Green Bay with a Bachelor’s Degree in Economics (2010) and a Master’s in Resource Management (Economic Feasibility of Agricultural Land Conversion to Switchgrass in the Lower Fox River Watershed, WI - 2013). Work experiences prior to the USFWS include creel surveys, stream habitat assessment, amphibian surveys, pollution prevention, and waste management, and general construction.
