

Charles (Chuck) Bronte, is Senior biologist and head of the Great Lakes Fish Tag and Recovery Laboratory. He has 35 years of experience providing management assistance and conducting applied research on fishes of the Great Lakes for the U.S. Fish and Wildlife Service and the U.S. Geological Survey. He currently leads a dedicated team of biologists and technicians providing large-scale tagging, tag recovery, and analytical services to state agencies to manage their multi-million dollar salmon fisheries, and to federal hatcheries involved in lake trout restoration. He is also active in native species restoration planning and research, and has authored or co-authored over 60 research papers, mostly on lake trout biology and restoration.
