

Shannon Cressman is the lead biological fisheries technician for the Great Lakes Fish Tag and Recovery Laboratory. Shannon has been with the USFWS since June 2013, where she assists with coordinating data and specimen collection activities of seasonal data recovery technicians around the Great Lakes, surveys and collects biological data and specimens on Great Lakes Salmon and Trout, processes aging structures and ages wild caught Chinook salmon and lake trout for year class determination. She is also a member of the Green Bay Fish and Wildlife Conservation Office Outreach Committee that informs and educates the public on natural resource activities conducted by the office. She did her undergraduate study at the University of Maine Machias, where she received a B.S. in Marine Biology with a concentration in biological sciences. Before arriving at the USFWS, Shannon worked along the east coast educating children on marine and freshwater biology and outdoor wilderness survival.
