

**Ted Treska** is a Fish Biologist that supervises part of the Native Species Program that is tasked with monitoring lake trout and lake whitefish populations in Lake Michigan with an increasing interest in the fish community of Green Bay. Since starting with the US Fish & Wildlife Service in 2009, Ted has been involved in monitoring fish populations and running catch at age models to recommend harvest for waters of the 1836 Treaty Waters. With an increasing interest in the fisheries of Green Bay, Ted coordinates a group of biologists and other natural resources professionals to share data and coordinate efforts to better understand the complex system. In addition, he works for the Great Lakes Fishery Commission compiling lamprey attack data from across the Great Lakes and looking at lamprey impacts on fisheries. Ted also serves as the Safety Officer for the Green Bay office.
