

Bumble Bee ID

Poem by Johanna James-Heinz

Impat has a back that's mostly black.
Griseocollis wears a belt of brown.
If you see two bumps, then you have Bimac.
Fervidus is yellow all the way down.
Pennsylvanicus is bold and blocky,
but look at the head,
If there's yellow there, it's Auricomus instead.
Affinis is endangered and rare,
look for an orange spot surrounded by yellow hair.
