This version of the User’s Guide reflects changes in response to input from users and in response to the 2018 revised Programmatic Biological Opinion. The most current versions of supporting documents for this range-wide programmatic consultation, including the appendices listed above, are posted on the U.S. Fish and Wildlife Service’s Region 3 website.
1. Introduction

This document provides guidance for the implementation of the range-wide programmatic consultation for the Indiana bat and northern long-eared bat (NLEB). This document is based on the revised November 2016 Federal Highway Administration (FHWA), Federal Railroad Administration (FRA), and Federal Transit Administration (FTA) Programmatic Biological Assessment for Transportation Projects in the Range of the Indiana Bat and Northern Long-eared Bat (BA), and the U.S. Fish and Wildlife Service (Service) revised Programmatic Biological Opinion, dated February 5, 2018 (BO). The BO encompasses the previously released programmatic informal consultation, which has undergone minor revisions and now includes FTA projects. The Service, FHWA, FRA, and FTA jointly developed this User’s Guide to be instructional for both transportation agencies and Service Field Offices. Since the completion of User Guide Version 4.0, the Service has developed an Assisted Determination Key in the Information for Planning and Consultation (IPaC) System as a means of identifying a project’s effect determination under the BO and electronically submitting to the Service. We encourage the use of the IPaC Key to submit your site-specific projects to the Service. We also encourage feedback on the IPaC tool as well as this User’s Guide to facilitate updates and improvements, as necessary.

This User’s Guide provides:

- **Programmatic Scope and Effects Analysis Summary**: Actions appropriate for use of the range-wide programmatic consultation and key effects analysis decision points;
- **Standard Operating Procedure (SOP) for Project(s) Submission**: Guidance for project submission under the range-wide programmatic consultation for FHWA, FRA, FTA, and their respective designated non-federal representatives (henceforth “transportation agencies”) and SOPs for the Service’s review and tracking of the range-wide programmatic consultation;
- **IPaC Assisted Determination Key**: A web-based tool to assist in the identification of potential project effects on both bat species and applicable AMMs to reduce potential impacts to both bat species (Appendix A);

Any questions regarding the Range-wide Programmatic Consultation and/or User’s Guide should be addressed at the local FHWA/FRA/FTA/State Department of Transportation/Service field office level. If resolution cannot be achieved, contact:

---

1 Provide feedback on the User Guide and Appendices to the appropriate agency contact listed in the box above.
• **Project Submittal Form:** A form for transportation agencies to use for submitting project-level information to the appropriate Service Field Office (Appendix B);

• **Avoidance and Minimization Measures:** Summary of Avoidance and Minimization Measures (AMMs) to be implemented, as applicable, to reduce the potential effects of projects so as to be within the scope of the range-wide programmatic consultation (Appendix C);

• **Bridge/Abandoned Structure Assessment Guidance and Form:** Guidelines to determine if any bat species are likely using bridges/structures, and a form for documenting and submitting a site-specific bridge/abandoned structure assessment (Appendix D); and

• **Post Assessment Discovery of Bats at Bridge/Structure Form:** A form used to report incidental take of bats that may occur during construction of bridge activities (Appendix E).

The Service encourages all parties who plan to use the range-wide programmatic consultation to review the BA if there are questions regarding interpretation. The BA contains detailed information on the proposed action, an analysis of the potential effects to the species and their resources, and support of effect determinations. The BA and implementation documents relevant for compliance with the range-wide programmatic consultation, as well as Service Field Office contacts are available at the Service’s Region 3 website at: [http://www.fws.gov/midwest/endangered/section7/fhwa/index.html](http://www.fws.gov/midwest/endangered/section7/fhwa/index.html).

The BA covers the full range of both bat species within the United States, which includes all or part of the following States (plus the District of Columbia): Alabama, Arkansas, Connecticut, Delaware, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, New Hampshire, New Jersey, New York, North Carolina, North Dakota, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Vermont, Virginia, West Virginia, Wisconsin, and Wyoming.

2. **Programmatic Scope and Effects Analysis Summary**

The range-wide programmatic consultation can be used for projects that may affect Indiana bats and/or NLEBs. However, Transportation Agencies may use any other applicable Endangered Species Act Section 7 consultation for projects that may affect the Indiana bat and/or NLEB. The Intra-Service Programmatic BO on the Final 4(d) Rule for the NLEB may be used for projects only affecting the NLEB. If both species are present in the project action area, the range-wide programmatic consultation may be used in conjunction with the Intra-Service Programmatic BO on the Final 4(d) Rule, although it is not necessary. Projects impacting designated Indiana bat critical habitat are not included in this programmatic consultation.

As defined in the ESA Section 7 regulations (50 CFR 402.02), “action” means “all activities or programs of any kind authorized, funded, or carried out, in whole or in part, by federal agencies in the United States or upon the high seas.” The “action area” is defined as “all areas to be affected directly or indirectly by the federal action and not merely the immediate area involved in the action.” The Service has determined that

---

2 Further clarification is provided by the national consultation FAQs at [https://www.fws.gov/endangered/what-we-do/faq.html#18](https://www.fws.gov/endangered/what-we-do/faq.html#18).
the action area for the range-wide programmatic consultation, hereby referred to as the “action area” is all lands within the range of the Indiana bat and northern long-eared bat affected directly or indirectly by the project’s components described in the Description of the Proposed Action of the BO. For the sake of this consultation, the action area for individual projects analyzed by the range-wide programmatic consultation will be referred to as “project action area”.

Figure 1. Project Action Area

Section 2 provides examples of: 1) actions that are outside the scope of the programmatic consultation and may require additional or separate coordination with the appropriate Service Field Office; 2) actions that have no effect on either bat species, in which consultation with the Service is not required; and 3) actions that may affect either bat species. The IPaC Assisted Determination Key is a web-based tool that replaces the scoping worksheet, which assists in determining potential project effects on both bat species, and the applicable AMMs to be implemented in order to reduce potential impacts.

Note: In certain cases, the transportation agency or the Service Field Office may request additional up-front coordination to determine whether a project adheres to the scope of the range-wide programmatic consultation.
consultation. This coordination could be initiated in one of two ways: 1) the transportation agency is uncertain whether or not a project is covered and contacts the appropriate Service Field Office, or 2) the transportation agency submits the project under the programmatic consultation, but the Service Field Office requests more information following the receipt of the Project Submittal Form or effects determination letter from the IPaC System. The Service’s request for additional information must be made within the 14-calendar day evaluation period for informal consultation or the 30-calendar day review period for formal consultation under the range-wide BO. The official evaluation period starts following the receipt of a complete Project Submittal Form or effects determination letter from the IPaC System. Transportation agencies are encouraged to coordinate with Field Offices in advance of their project submittal to minimize potential process delays.

There are also two outcomes for projects requiring additional coordination: 1) upon the acquisition of additional information (e.g., summer roosting, hibernacula, bridge roosting activity, etc.) or the implementation of site-specific AMMs, the project is determined to be within the scope of the range-wide programmatic consultation and the transportation agency and Service proceed using the range-wide BO, or 2) the project is determined to be outside the scope of the range-wide programmatic consultation, in which case separate consultation with the appropriate Service Field Office is necessary.

Figure 2. Consultation processes for Indiana bat and NLEB.

---

3 If additional information is required or if site-specific AMMs are implemented in order to employ the programmatic consultation, the relevant transportation agency and Service Field Office are responsible for documenting those actions on the Project Submittal Form or through the IPaC Assisted Determination Key.
2.1 Actions outside the Scope of the Range-wide Programmatic Consultation

The Description of the Proposed Action includes a general description of all types of transportation agency-involved activities. However, the transportation agencies and the Service have made a preliminary determination that some proposed activities do not meet the criteria for inclusion in the range-wide programmatic consultation. These projects may or may not result in adverse effects to NLEBs and/or Indiana bats. Additional coordination with the appropriate Service Field Office is necessary to make a final effect determination on these projects. Separate individual consultation with the appropriate Service Field Office may be required.

The following categories of activities are **NOT** covered by the range-wide programmatic consultation:

- Activities that remove documented Indiana bat roosting/foraging habitat\(^4\) or travel corridors\(^5\) between May 1 and July 31;
- Activities that remove documented NLEB roosts and/or trees within 150 feet of those roosts between June 1 and July 31;
- Activities involving percussives (or other activities that increase noise above existing traffic/background levels) that are not associated with tree removal/trimming or bridge/structure work when conducted during the active season within areas that contain documented habitat;
- Activities that impact a known hibernaculum, or a karst feature (e.g., sinkhole, losing stream, or spring) that could result in effects to a known hibernaculum;
- Activities that raise the road profile above the tree canopy within 1,000 feet of documented habitat at any time of year;
- Activities that involve slash pile burning within 0.5 miles of a hibernaculum;
- Bridge and/or structure removal, replacement, or maintenance activities that do not maintain suitable roosting habitat (when assessment\(^6\) documents signs of bat use or when bat use is assumed);

---

\(^4\) Documented roosting or foraging habitat – for the purposes of this consultation, we are considering documented habitat as that where Indiana bats and/or NLEB have actually been captured and tracked using (1) radio telemetry to roosts; (2) radio telemetry bi-angulation/triangulation to estimate foraging areas; or (3) foraging areas with repeated use documented using acoustics. Documented roosting habitat is also considered as suitable summer habitat within 0.25 miles of documented roosts.

\(^5\) Documented travel corridor - for the purposes of this BA, we are considering documented corridors as that where Indiana bats and/or NLEB have actually been captured and tracked to using (1) radio telemetry; or (2) treed corridors located directly between documented roosting and foraging habitat.

\(^6\) Structure assessments for occupied buildings refers to a cursory inspection for bat use. For abandoned buildings a more thorough evaluation is required (See Appendix D for bridge/abandoned structure assessment guidance).
• Bridge and/or structure removal, replacement, or maintenance activities that are likely to disturb bats when a maternity colony of bats is documented or assumed to be present;

• Any activity within 0.5 mile from an Indiana bat and/or NLEB hibernaculum unless those activities:
  o Do not involve any construction\(^7\) (e.g., bridge/abandoned structure assessments, surveys, planning and technical studies, property inspections, and property sales); or
  o Do not cause any stressors to the bat species, including as described in the BA/BO (i.e. do not involve ground disturbance, percussive noise, temporary or permanent lighting, tree removal/trimming, nor bridge/structure activities (e.g., lining roadways, unlighted signage, rail road crossing signals, signal lighting, and minor road repair such as asphalt fill of potholes, etc.)); or
  o Are limited to the maintenance of the surrounding landscape at existing facilities (e.g., rest areas, stormwater detention basins)
    ▪ For activities with no suitable summer habitat\(^8\) present, tree removal/trimming may occur but no ground disturbing activities.
    ▪ For activities with suitable summer habitat present, no tree removal/trimming or ground disturbing activities.

• Any activity greater than 0.5 mile from an Indiana bat and/or NLEB hibernaculum and outside 300 feet from existing road/rail surfaces\(^9\) at any time of year, unless those activities:
  o Do not involve any construction (e.g., bridge/abandoned structure assessments, surveys, planning and technical studies, property inspections, and property sales); or
  o Do not cause any stressors to the bat species, including as described in the BA/BO (i.e. do not involve ground disturbance, percussive noise, temporary or permanent lighting, tree removal/trimming, nor bridge/structure activities (e.g., lining roadways, unlighted signage, rail road crossing signals, signal lighting, and minor road repair such as asphalt fill of potholes, etc.)); or
  o Are limited to maintenance of the surrounding landscape at existing facilities (e.g., rest areas, stormwater detention basins)
    ▪ For activities with no suitable summer habitat present, tree removal/trimming may occur but no ground disturbing activities.
    ▪ For activities with suitable summer habitat present, no tree removal/trimming or ground disturbing activities;
  o Are inside the species range but no suitable summer habitat within the project action area; or
  o Are limited to wetland or stream protection activities associated with compensatory wetland/stream mitigation that do not clear suitable habitat (i.e. tree removal/trimming); or

\(^7\) Construction refers to activities involving ground disturbance, percussive noise, and/or lighting.
\(^8\) Refer to the USFWS’s summer survey guidance for the definition of suitable habitat (http://www.fws.gov/midwest/endangered/mammals/inba/inbasummersurveyguidance.html).
\(^9\) Road surface is defined as the actively used (e.g. motorized vehicles) driving surface and shoulders (may be pavement, gravel, etc.) and rail surface is defined as the edge of the actively used rail ballast.
• Only involve slash pile burning; or
• Are inside the species range and within suitable habitat, but have negative presence/probable absence (P/A) summer surveys.10

Note: The maximum acreage anticipated for any given project addressed in this programmatic range-wide consultation is approximately 20 acres of suitable habitat (generally per 5-mile section of road/rail), unless approved by a local USFWS Field Office on case-by-case basis that the effects of the action fit in the programmatic.

2.2 Actions That Will Have No Effect on Bats and/or Indiana Bat Critical Habitat

Some projects for reasons of location or activity type will have “no effect” on either bat species or Indiana bat designated critical habitat.

The following categories of activities result in “no effect” to the Indiana bat and/or NLEB:

• Project(s) outside the species’ range;11
• Project(s) inside species range but no suitable summer habitat within the project action area;
• Bridge and/or structure removal, replacement, or maintenance activities without any signs of bats (bridge/structure assessment documents no signs of bats or bat use12 (bats, guano, etc.) and does not impact suitable summer habitat within the project action area;
• Activities (anywhere, including within 0.5 mile of hibernacula) that do not involve any construction activities (e.g., bridge/abandoned structure assessments, surveys, planning and technical studies, property inspections, and property sales);
• Activities (anywhere, including within 0.5 mile of hibernacula) that do not cause any stressors to the bat species, including as described in the BA/BO (i.e. do not involve ground disturbance, percussive noise, temporary or permanent lighting, tree removal/trimming, nor bridge/structure activities (e.g., lining roadways, unlighted signage, rail road crossing signals, signal lighting, and minor road repair such as asphalt fill of potholes, etc.));
• Activities (anywhere, including within 0.5 miles of hibernacula) limited to the maintenance of the surrounding landscape at existing facilities (e.g., rest areas, stormwater detention basins) located outside suitable summer habitat -- no new ground disturbance; and

10 P/A summer surveys conducted within the fall swarming/spring emergence range of a documented Indiana bat hibernacula (contact local Service Field Office for appropriate distance from hibernacula) that result in a negative finding requires additional consultation with the local Service Field Office to determine if clearing of forested habitat is appropriate and/or if seasonal clearing restrictions are needed to avoid and minimize potential adverse effects on fall swarming and spring emerging Indiana bats.
11 See http://ecos.fws.gov/speciesProfile/profile/speciesProfile?spcode=A000
12 Follow bridge/abandoned structure assessment guidance.
• Activities within 300 feet of the existing road/rail surface (must also be greater than 0.5 miles of a hibernacula) that include percussives or other activities that increase noise above existing traffic/background levels:
  o within areas that contain suitable habitat (documented or undocumented)
  o conducted during the inactive season
  o does not involve tree removal/trimming or bridge/structure work;

For activities identified above that result in “no effect” to the Indiana bat or NLEB, the transportation agency documents “no effect” on the Project Submittal Form (Appendix B) for their files. No coordination with the Service is required.

2.3 Actions That May Affect Bats

For projects within the range of either the Indiana bat or NLEB in which suitable habitat is present, and no bat surveys have been conducted, the transportation agency will assume presence of the appropriate species. This assumption of presence should be based upon the presence of suitable habitat and the capability of bats to occupy it because of their mobility.

Actions NLAA

Projects occurring near suitable habitat (e.g., non-forested area between patches of suitable habitat that Indiana bat or NLEB would typically cross) or within suitable habitat may affect the Indiana bat or NLEB. Some of these projects may have a discountable or insignificant effect on either bat species and thus are considered NLAA actions.

Such activities that are NLAA include:

• Projects inside the species range and within suitable bat habitat, but with negative bat P/A summer surveys$^{13,14}$ (must also be greater than 0.5 mile from any hibernaculum);

• Activities within 300 feet of the existing road/rail surface (must also be greater than 0.5 miles of a hibernacula) that include percussives or other activities that increase noise above existing traffic/background levels:
  o within areas that contain undocumented habitat,
  o conducted during the active season
  o does not involve tree removal/trimming or bridge/structure work;

---

$^{13}$ Refer to http://www.fws.gov/midwest/endangered/mammals/inba/inbasummersurveyguidance.html
$^{14}$ P/A summer surveys conducted within the fall swarming/spring emergence range of a documented Indiana bat hibernacula (contact local Service Field Office for appropriate distance from hibernacula) that result in a negative finding requires additional consultation with the local Service Field Office to determine if clearing of forested habitat is appropriate and/or if seasonal clearing restrictions are needed to avoid and minimize potential adverse effects on fall swarming and spring emerging Indiana bats.
• Activities anywhere that are limited to slash pile burning (must also be greater than 0.5 miles of a hibernaculum);

• Activities anywhere that are limited to wetland or stream protection activities associated with compensatory wetland/stream mitigation that do not clear suitable habitat (i.e. tree removal/trimming) (must also be greater than 0.5 miles of a hibernaculum); and

• Activities (anywhere, including within 0.5 miles of hibernacula) limited to the maintenance of the surrounding landscape at existing facilities (e.g., rest areas, stormwater detention basins) located within suitable summer habitat -- no new ground disturbance or tree removal/trimming.

For activities identified above that result in “may effect, NLAA” to the Indiana bat or NLEB, the transportation agency will complete and email the Project Submittal Form (Appendix B) to the lead Service Field Office, which will observe a 14-calendar day evaluation period from receipt of submittal form.

Actions NLAA with AMMs

As identified above, transportation projects occurring near or within suitable habitat “may affect” the Indiana bat or NLEB. In many such circumstances, the implementations of AMMs (Appendix C) are required for the project to reach NLAA for both bat species.

Transportation projects that meet the conditions listed below, and implement all applicable AMMs are NLAA Indiana bats or NLEBs:

• Tree removal/trimming that:
  o Occurs greater than 0.5 mile from any hibernacula; and
  o Occurs within 100 feet of existing road/rail surfaces; and
  o Is clearly demarcated, and
  o Does not alter documented roosts and/or surrounding summer habitat within 0.25 mile of documented roosts; and
  o Occurs:
    ▪ outside the active season (i.e., winter), or
    ▪ clears 10 or fewer trees\(^\text{15}\) per project during the active season and a visual emergence survey\(^\text{16}\) is conducted and no bats are observed, and
  o Includes all applicable lighting minimization measures (See AMMs in Appendix C).

\(^\text{15}\) Areas containing more than 10 trees will be assessed by the local Service Field Office on a case-by-case basis with the project proponent.

\(^\text{16}\) Refer to http://www.fws.gov/midwest/endangered/mammals/inba/inbasummersurveyguidance.html
AND / OR

• Structure or bridge activities that:
  o Are outside the active season and work does not disturb bats; and
  o Maintain suitable roosting habitat (if signs of bat use); and
  o Include all applicable lighting minimization measures.

AND/OR

• Structure activities that:
  o Are during the active season, and does not disturb or harass roosting bats in any way (e.g. activity away from roosts inside common rooms and structures, normal cleaning and routine maintenance); and
  o Maintain suitable roosting habitat (if signs of bat use); and
  o Includes all applicable lighting minimization measures.

AND/OR

• Bridge activities that:
  o Are during the active season, and does not disturb or harass roosting bats in any way, including:
    ▪ Above deck work where construction equipment or materials do not extend to the underside of the deck where bats may be located (e.g., materials that may drip down to the underside of deck), and does not include percussives (vibration) or noise levels above general traffic (e.g., road line painting, wing-wall work);
    ▪ Below deck work that is conducted away from roosting bats and does not involve percussives or noise levels above general traffic (e.g., wing-wall work, abutment, beam end, scour, or pier repair); and/or
    ▪ Any other bridge repair, retrofit, maintenance, and/or rehabilitation (which may include percussives) conducted in the evening while the bats are feeding, starting one hour after sunset, and ending one hour before daylight excluding the hours between 10 p.m. and midnight \(^{17}\) and keep the light localized.
  o Maintain suitable roosting habitat (if signs of bat use); and
  o Includes all applicable lighting minimization measures.

For activities identified above that result in “may effect, NLAA” to the Indiana bat or NLEB with the implementation of all applicable AMMs, the transportation agency will complete and email the Project Submittal Form (Appendix B) to the lead Service Field Office, which will observe a 14- calendar day evaluation period from receipt of submittal form.

\(^{17}\) Keeley and Tuttle (1999) indicated peak night roost usage is between 10:00 p.m. to midnight.
Actions LAA

If adverse effects to either bat species cannot be avoided, formal consultation with the Service is required. Transportation projects within the scope of the range-wide programmatic consultation, and meet the conditions listed below, and implement all applicable AMMs are likely to adversely affect the Indiana bat and/or NLEB.

Project Criteria for Tree Removal/Trimming Conditions (that are likely to adversely affect the bat species):

- All tree removal/trimming must:
  - Occur greater than 0.5 mile from hibernacula; and
  - Be within 300 feet of existing road/rail ballast; and
  - Be clearly demarcated; and
  - Include all applicable lighting minimization measures.

- Projects within suitable bat habitat, but no documented Indiana bat roosting/foraging habitat or travel corridors must:
  - Occur during the winter season 100-300 feet from existing road/rail surface; or
  - Occur during the active season within 0-100 feet from the existing road/rail surface, and clears 10 or fewer trees; visual emergency survey\(^\text{18}\) is conducted and bats are observed;\(^\text{19}\) or
  - Occur during the active season (except May, June, July) within 0-300 feet from existing road/rail surface (no visual emergence survey); or
  - Occur May, June, July of the active season and 0-300 feet from existing road/rail surface (no visual emergence survey is conducted and all trees <9 inches dbh); or
  - Occur during May, June, July of the active season within 100-300 feet from existing road/rail surface, and include limited clearing such that all trees can be visually assessed – see BA for more instructions.

- Projects within documented Indiana bat roosting/foraging habitat or travel corridors must:
  - Occur during the winter season within 0-300 feet from existing road/rail surface; or
  - Occur during the active season (except May, June, July) within 0-300 feet of existing road/rail surface.

- Projects within suitable bat habitat, but no documented NLEB roosting/foraging habitat or travel corridors must:
  - Occur during the winter season 100-300 feet from existing road/rail surface; or
  - Occur during the active season within 0-100 feet from the existing road/rail surface, and clears 10 or fewer trees; visual emergency survey\(^\text{20}\) is conducted and bats are observed;\(^\text{21}\) or

\(^{18}\) Refer to http://www.fws.gov/midwest/endangered/mammals/inba/inbasummersurveyguidance.html
\(^{19}\) Coordinate results with local FO and follow guidance for clearing of documented roosting/foraging habitat or travel corridors.
\(^{20}\) Refer to http://www.fws.gov/midwest/endangered/mammals/inba/inbasummersurveyguidance.html
• Occurs during the active season 0-100 feet from the existing road/rail surface and no visual emergence survey is conducted; or
• Occur during the active season within 100-300 feet from existing road/rail surface.

• Projects within documented NLEB roosting/foraging habitat or travel corridors must:
  o Occur during the winter season within 0-300 feet from existing road/rail surface; or
  o Occur during the active season (except known NLEB roosts and trees within 150 feet of those roosts in June and July) within 0-300 feet from existing road/rail surface.

Project Criteria for Bridges/Structures:

• Structure or bridge activities that:
  o Are conducted during the active season; and
  o Have no signs of a maternity colony (no more than 5 bats estimated to be present); and
  o Maintain suitable roosting habitat (if signs of bat use); and
  o May or may not result in disturbance or death to a small number of bats; and
  o Include all applicable lighting minimization measures.

For activities identified above that result in “may effect, LAA” to the Indiana bat or NLEB with the implementation of all applicable AMMs, the transportation agency will complete and email the Project Submittal Form (Appendix B) to the lead Service Field Office, which will observe a 30-calendar day evaluation period from receipt of submittal form.

21 Coordinate results with local FO and follow guidance for clearing of documented roosting/foraging habitat or travel corridors.
Table 1: Project criteria for tree removal/trimming activities within the scope of the range-wide programmatic consultation. Note: All tree removal/trimming must occur greater than 0.5 mile from hibernacula.

3. Standard Operating Procedure for Site-Specific Project(s) Submission

Please use the following procedure to submit site specific transportation project(s) for inclusion in the range-wide programmatic consultation and to record project-specific information.

3.1 Process for Transportation Agencies

Step 1 - Begin Notification/Submittal Process

To begin this step, the applying transportation agency will go to the Information for Planning and Conservation (IPaC) website at http://ecos.fws.gov/ipac/. Login to your IPaC account (first time users need to create an account and activate as directed) and follow these steps:22

- Under My Projects, select “Create a Project”;
- Enter project location, define the area, confirm and select “Continue”;
- A resources page will be displayed that provides trust resource information in the project action area;
- Select "Define Project";
- Give project name, description and “Save”;
- The project home page will be displayed; select "Start Review", and then "Continue";
- Request an official species list or skip this step (not required for using the Assisted Determination Key, but may be required by local Service field office as part of their project review process);
- If not using the Assisted Determination Key, request an official species list, enter contact information, submit, and skip to Step 2 below.
- If using the Assisted Determination Key (recommended), select “Evaluate” and continue through Step 1.
  - A description will be displayed for the Assisted Determination Key that is applicable to the Service’s August 2017 programmatic biological opinion for transportation projects;
  - Select “Check if my project qualifies”;
  - Answer the questions in the Qualification Interview;
  - A preliminary effects determination is displayed, select “Save and Continue”;
  - Complete the Project Questionnaire and select “Continue”;
  - The Determination Key Result is displayed;
  - If the Key Result is “May Affect, Not Likely to Adversely Affect” (NLAA):
    - If you are a federal action agency or designated non-federal representative:
      - Submit the project for “Concurrence Verification” to the Service,
      - Complete contact information and submit,

---

22 Transportation agencies may coordinate with the appropriate Service Field Office to develop a separate process for requesting a site-specific project be included in the range-wide programmatic consultation. However, the information on the Project Submittal Form (Appendix B) must be provided.
- Select View Concurrence Verification Letter (you may wish to print or save a copy for your files);
- The local Service field office will receive notice of your project and will contact you within 14 days if necessary;
  - If you are not a federal action agency or designated non-federal representative (e.g., consultant or local transportation agency):
    - Request to generate a “Consistency Letter”;
    - Verify project name and description and select “Generate Consistency Letter”;
    - Select View Consistency Letter and save,
    - Provide Consistency Letter to the federal action agency or designated non-federal representative for submittal to the Service via IPaC;
  - If the Key Result is “May Affect, Likely to Adversely Affect” (LAA):
    - Request to generate a “Consistency Letter”;
    - Verify project name and description and select “Generate Consistency Letter”;
    - Select View Consistency Letter and save,
    - The federal action agency or designated non-federal representative should submit the Consistency Letter to the Service via email/traditional correspondence method to verify use of the rangewide programmatic biological opinion.
    - The local Service field office will respond with a letter within 30 days.

**Step 2 – Determine Adherence to Scope and Submit Form (Skip this step and continue to Step 3 if using the Assisted Determination Key)**

After an initial e-mail confirmation that a species list request has been submitted, the transportation agency contact will receive a follow-up email with an attached official species list, an attached GIS file of their project location, the appropriate Service Field Office contact(s) information, and the consultation code(s) associated with the species list. Should a project span multiple Service Field Office jurisdictions, the transportation agency will be provided with more than one Service Field Office contact and consultation code. For transportation actions that cross jurisdictional boundaries (e.g., from one State DOT to another), one transportation entity should take the lead in implementing this process and determining whether the action, as a whole, meets the requirements for inclusion in the range-wide programmatic consultation.

The transportation agency will determine whether or not the proposed project adheres to the scope and criteria of the range-wide BA (use of the IPAC Assisted Determination Key may be used to help make this determination). If it is determined that the project is within the scope of the range-wide BA, the transportation agency shall submit a Project Submittal Form (or a comparable Service approved form), which includes the identification of AMMs and if applicable, compensatory mitigation measures required to offset adverse effects on the Indiana bat, to the email addresses of the appropriate Service Field Offices. If the determination is NE, then do not submit the Project Submittal Form to the Service Field Office, but rather retain a copy for your files.
Step 3 – Mitigation Implementation Process (for projects LAA Indiana bat only)

If the effects determination is may affect, likely to adversely affect, and compensatory mitigation is required to offset adverse effects on the Indiana bat, the transportation agency must notify the local Service Field Office of the mechanism it has selected to implement compensatory mitigation. Mechanisms included the range-wide in lieu fee program, a Service-approved state or regional specific in lieu fee program, a conservation bank, or local conservation site (see Section 2.11 of the BA). If using the range-wide in lieu fee program sponsored by The Conservation Fund, the transportation agency shall send notification to the Program Coordinator, Lauri Lindquist (269-426-8825) via ibatILFCoordinator@conservationfund.org, as well as to the local Service Field Office in order to begin the mitigation process.

3.2 Process for Lead Service Field Office

TAILS

Upon receiving either a Project Submittal Form, a Concurrence Verification Letter from the IPaC Assisted Determination Key, or a LAA Consistency Letter from a transportation agency, the lead Service Field Office will update the project(s)’ associated Activity in the Environmental Conservation Online System (ECOS) Tracking and Integrated Logging System (TAILS) using the consultation code(s) from the Project Submittal Form or Consistency Letter. Each Service Field Office will follow their office’s data entry procedures for ECOS-TAILS as well as the processes described below. The following process is required to enter additional project-specific information and “position/associate” the Activity in the appropriate Programmatic Bundle.

- If a Concurrence Verification Letter is received from the IPaC system, the associated ECOS-TAILS Activity is automatically populated and no further data entry is required. (One may access the ECOS-TAILS Activity using the consultation code(s) from the Concurrence Verification Letter or the web link provided in the email from the IPaC system when receiving the verification letter request;
- If a Project Submittal Form or LAA Consistency Letter is received, go to ECOS-TAILS at https://ecos.fws.gov/tails and continue as instructed below;
- Perform a Section 7 Consultation search and navigate to the TAILS Activity associated with the consultation code provided in the Project Submittal Form or the subject line of the LAA Consistency Letter (if no consultation code is provided, a new TAILS Activity should be created);
- Go to Edit – Core information
  - Consultation Type – you will be changing the Activity from Species List to Informal or Formal Consultation via “Add Event” as described below

23 If a separate process other than IPaC is used by the transportation agency, the lead Service field office (upon receiving the Project Submittal Form) will create a Section 7 Consultation Activity in ECOS-TAILS for the specific project(s) following their office’s data entry procedures and the process described above.

24 Information entered into IPaC by the action agency is transferred to ECOS-TAILS as a Section 7 Species List (IPaC-Generated) Activity, in which “project name” translates to the TAILS Activity Title, the “project description” translates to the TAILS Activity Description, and the “project classification/type” translates to the TAILS Action/Work Type.

25 If a separate process other than IPaC is used by the transportation agency, the lead Service field office will create
Information).

- Species – select all species requiring consultation for the project(s).
- Staff Lead – select individual (identify additional staff within the “Staff” field).
- Lead Agency – Note that this refers to the Federal governmental lead action agency initiating consultation; change to/select FHWA or FRA or FTA under DEPT OF TRANSPORTATION as appropriate.
- Supporting Agency – this is an optional field and refers to Federal or non-Federal agencies (other than the Lead Agency) involved in the activity; the Supporting Agency is often the requesting transportation agency listed on the Project Submittal Form or LAA Consistency Letter.
- Consultation Complexity – select “Programmatic Project-Level”.
- Start Date – reset to date in which a completed Project Submittal Form or Consistency Letter was received.
- Due Date – enter either “14” in the “Standard Days until Due” field for Informal Consultation or “30” in the “Standard Days until Due” field for Formal Consultation and click on the “Compute” button (this will calculate the Due Date as being 14 or 30 calendar days out from the Start Date).
- Conclusion Date – reset to date the Service completed optional review.
- Click SAVE.

- Go to Edit – Bundles
  - Search for Bundle Code 09E00000-2015-B-0002 titled “FHWA, FRA, FTA Indiana bat/Northern long-eared bat Programmatic Consultation”.
  - Select “Add” to position/associate the Activity to the selected Bundle.

- Go to Edit – Biological Conclusion
  - Biological Conclusions By Species – select effects determination/consultation type for each species.
  - Take – for only projects LAA either bat species, type the following information (as quoted):
    - “Type – loss or alteration of forested habitat”
    - “Number – [enter number rounded to hundreds] acres26 of forested habitat”
    - “Timing – [enter ‘active season’ or ‘winter’]”
    - “Phase – [enter life stage of ‘pups’ and/or ‘adults’]”
  - Click SAVE
    - After the project is completed, should the State or local transportation agency report the discovery of a dead or injured Indiana bat and/or NLEB, type the following information into the Take field under BiologicalConclusion:
      - “Type – individual”
      - “Number – [enter number] Indiana bat(s)” and/or
      - “Number – [enter number] NLEB(s)"

- Go to Events – Add Event

---

26 If described as number of trees, multiple by 0.09 to convert to acreage.
Event Date – reset to date a completed Project Submittal Form or LAA Consistency Letter was received.

Type – select “Change in Consultation Type”.

New Consultation Type (activated only with above Event Type) – select “Informal Consultation” if ALL species require informal consultation.

New Consultation Type (activated only with above Event Type) – select “Formal Consultation” if ANY species require formal consultation (even if other non-bat species require informal consultation, including Indiana bat and NLEB).

Description – type “2015-2016 FHWA/FRA/FTA range-wide programmatic consultation for Indiana bat and NLEB”.

Staff – enter name of Service person who is the contact for the project.

Select “Create” to complete the Event.

Go to Events – Add Event [this is only for Informal Consultations not submitted through the IPaC System]

Event Date – reset to date a completed Project Submittal Form was received.

Type – select “Additional Project Information Received”.

Description – for projects NLAA either bat species only, include the following information in your Event Description:
- Identify the affected resource/habitat type (e.g., tree, bridge, other non-tree roosting structure, etc.) and acres of tree habitat removed, if applicable

Staff – select who is creating the Event Electronic File – upload the completed Project Submittal Form and Bridge/Abandoned Structure Assessment Form (if applicable) received from the transportation agency; and select “Available Beyond FWS”.

File Categories – select “Event General”.

Select “Create” to complete the Event.

FWS Response

No response from the lead Service Field Office is required if you agree that the transportation agency’s project correctly falls within the scope of the programmatic NLAA determination. The lead Service Field Office should contact the transportation agency immediately if there are any questions or concerns about their determination.

The lead Service Field Office must respond to the transportation agency for any projects that fall within the scope of the programmatic LAA determination for either the Indiana bat and/or the NLEB. This response should happen within 30 days of receipt of the complete consultation package. There is a template Service response letter available for use.

Appendix A – IPaC Assisted Determination Key (Recommended)
The IPaC Assisted Determination Key has replaced the scoping worksheet of version 4.0 of the User Guide. The IPaC Assisted Determination Key is a web-based tool that may be used to help determine what type of an effect a project may have on either bat species; identify AMMs to be implemented, as applicable; and electronically submit project(s) information to the Service. The Assisted Determination
Appendix B - Project Submittal Form
In order to use the range-wide programmatic consultation, project-level information shall be provided to the appropriate Service Field Office for all “may affect” determinations. The most current Project Submittal Form is available at the Service’s Region 3 website: http://www.fws.gov/midwest/endangered/section7/fhwa/index.html

Appendix C - Avoidance and Minimization Measures
The most current summary of AMMs necessary to reduce the potential effects of projects so as to be within the scope of the range-wide programmatic consultation is available at the Service’s Region 3 website: http://www.fws.gov/midwest/endangered/section7/fhwa/index.html

Appendix D – Bridge/Abandoned Structure Assessment Guidance and Form
The guidelines in this document describe favorable characteristics of bridges/structures that may provide habitat for many bat species, and preliminary indicators intended to determine if any bat species are likely using bridges/structures. An assessment form is also included for use in documenting a site-specific bridge/abandoned structure. The most current bridge/abandoned structure assessment guidance and form are available at the Service’s Region 3 website: http://www.fws.gov/midwest/endangered/section7/fhwa/index.html

Appendix E – Post Assessment Discovery of Bats at Bridge/Structure Form
This form is used to report the incidental take of bats that has occurred during construction of bridge activities. The PBO anticipated that there may be instances where bridge assessments are completed in fulfillment of requirements of the PBO, but fail to detect Indiana bats that are later detected during construction. The Service anticipated that, in these instances, construction could result in incidental take in the form of harassment, injury, or death to as many as 5 Indiana bats for any particular project, with no more than 50 Indiana bats taken range-wide in any particular 12 month period. This amount of incidental take was exempted in the incidental take statement of the PBO for all projects utilizing the PBO, provided that the take is reported to the Service. In order to track the incidental take exempted, please use this form to report the number of bats taken and the form of take that occurred within 2 working days of the incident to the local Service field office. The most current Post Assessment Discovery of Bats at Bridge/Structure Form is available at the Service’s Region 3 website: http://www.fws.gov/midwest/endangered/section7/fhwa/index.html.
