Seasonal Biological Science Technician	Daniel De La Hoz

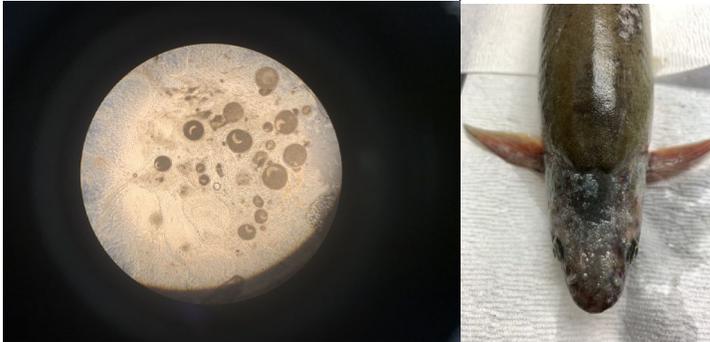

Fish Production:

Inside				
Species	Number	Fish/Kg	Avg. Length (MM)	Weight (Kg)
Bony Tail	0	0	0	0
Razorback Sucker	0	0	0	0

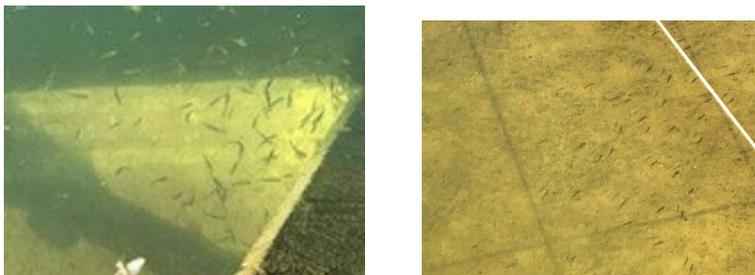

Outside				
Species	Number	Fish/Kg	Length (MM)	Weight (Kg)
Bony Tail fry	~20,000	N/A	~40	unknown
Bony Tail	~1700	~2.5	>200	163
Razorback Sucker	9788	16.8	>200	1085.1

June activites:

The warm temperatures of June revealed that one of our Bonytail chub ponds had Ich (commonly known as white spot disease). Despite our efforts to save the fish the pond was a total loss.

On the upside the bonytail chub fry ponds are doing very well with the new fertalization procedures.

The Razorback suckers are gaining weight and size.

Rust remediation is almost complete

Before

after

Future activities

Inside Birm filters on hold awaiting new backflush valves.

New lift pump for recirculating hatchery to be installed in July.

Pond liner and Kettle modifications due to begin (contract awarded).
