Draft Environmental Assessment for Hunting on the John W. and Louise Seier National Wildlife Refuge

Date: January 22, 2020

This Environmental Assessment (EA) is being prepared to evaluate the effects associated with this proposed action and complies with the National Environmental Policy Act (NEPA) in accordance with Council on Environmental Quality regulations (40 Code of Federal Regulations [CFR] 1500-1509) and Department of the Interior (43 CFR 46; 516 DM 8) and United States (U.S.) Fish and Wildlife Service (Service) (550 FW 3) regulations and policies. NEPA requires examination of the effects of proposed actions on the natural and human environment.

1.0 Introduction

1.1 Proposed Action

The Service is proposing to open hunting opportunities for game species on the John W. and Louise Seier National Wildlife Refuge (Seier NWR) in accordance with the refuge's conceptual management plan. Hunting would be allowed on all 2400 acres of the refuge with exception of a small safety zones around the building sites (Figure 1).

This proposed action is often iterative and evolves over time during the process as the agency refines its proposal and learns more from the public, tribes, and other agencies. Therefore, the final proposed action may be different from the original. The final decision on the proposed action will be made at the conclusion of the public comment period for the EA and the Draft 2020–2021 Refuge-Specific Hunting and Sport Fishing Regulations.

1.2 Background

National wildlife refuges are guided by the mission and goals of the National Wildlife Refuge System (Refuge System), the purposes of an individual refuge, Service policy, and laws and international treaties. Relevant guidance includes the National Wildlife Refuge System Administration Act of 1966 (NWRSA), as amended by the National Wildlife Refuge System Improvement Act of 1997 (Improvement Act), Refuge Recreation Act of 1962, and selected portions of the Code of Federal Regulations and Fish and Wildlife Service Manual.

In 1990, the Service and the Seier family, John W. and Louise Seier (brother and sister), exchanged a series of letters and met concerning the donation of their ranch to the Service. The Service agreed to accept the property and assisted them in drafting language in preparation of a trust to deed the property to the Service upon their death. John passed away in 1997 and Louise passed in 2002. The Service began managing the land in 2003.

The refuge was established pursuant to The John W. and Louise Seier Living Trust. The primary purpose of the refuge is to “. . . for the development, advancement, management, conservation, and protection of fish and wildlife resources . . .” (16 U.S. Code a 742fl:[a][4]) “. . . for the benefit of the Service, in performing its activities and services. Such acceptance may be subject to the terms of any restrictive or affirmative covenant, or condition of servitude” (16 U.S. Code a 742 f[b][1]) (Fish and Wildlife Act of 1956).

U.S. Fish & Wildlife Service

John W. and Louise Seier National Wildlife Refuge

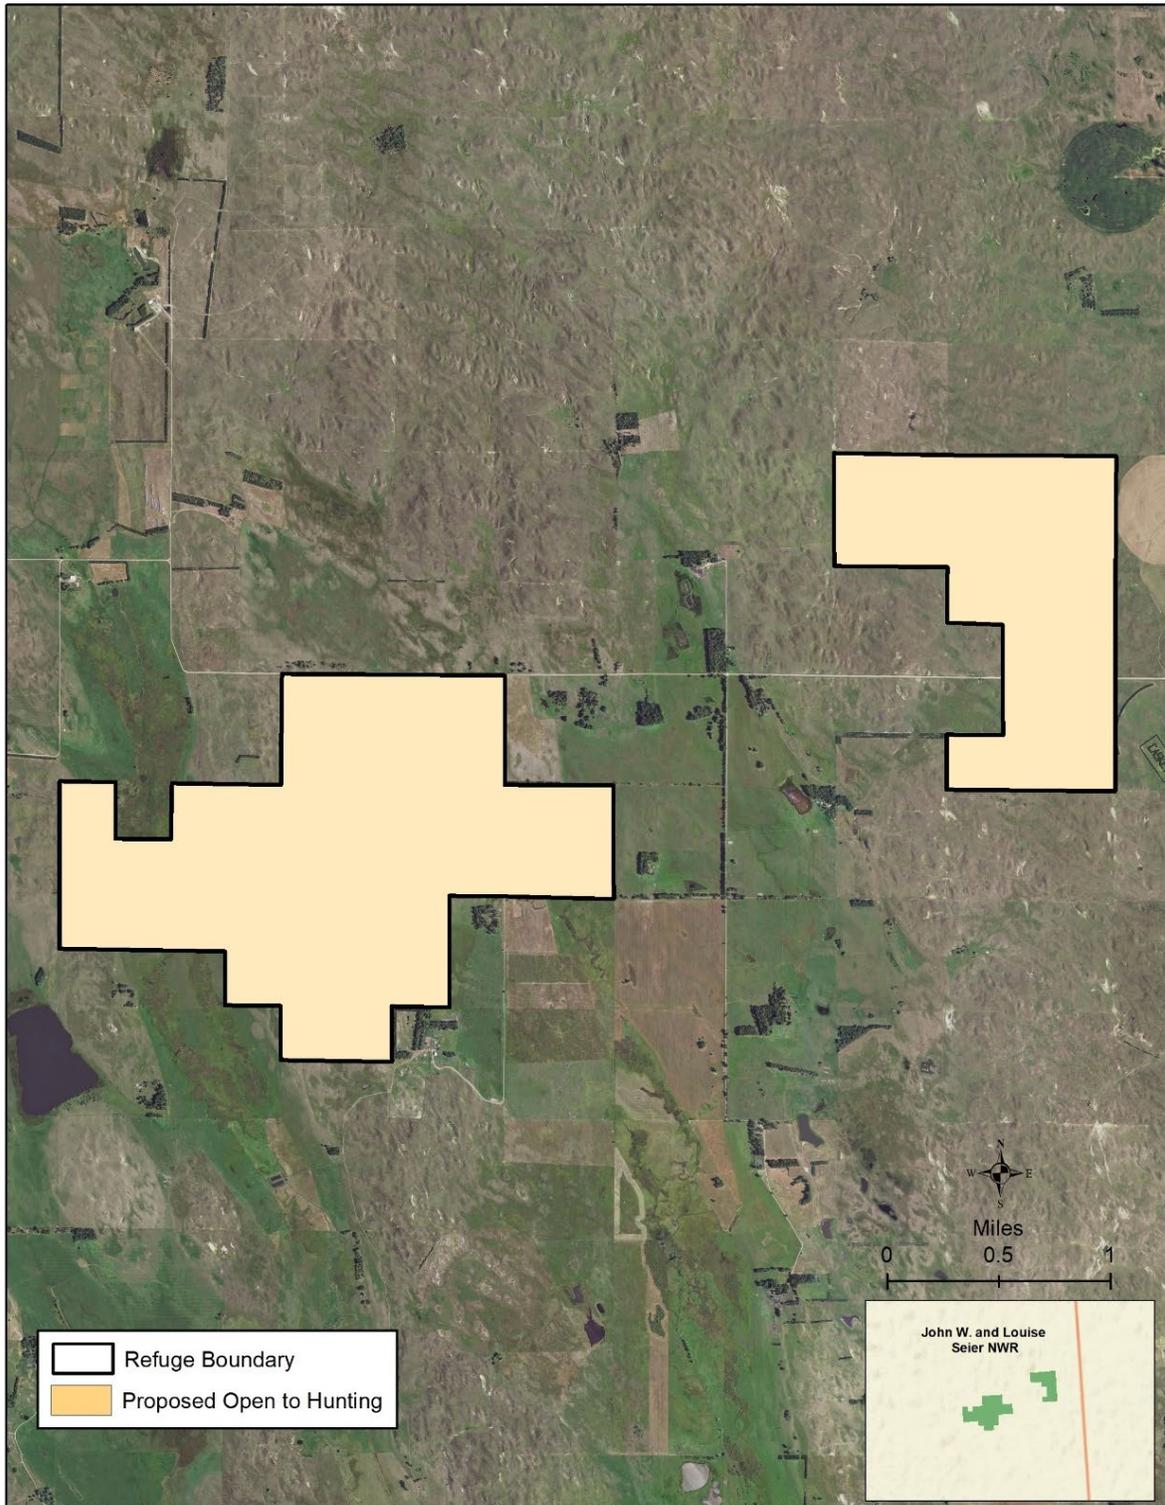

Figure 1. John W. and Louise Seier National Wildlife Refuge Map and Proposed Hunting Area

The mission of the Refuge System, as outlined by the NWRSAA, as amended by the Improvement Act (16 U.S. Code 668dd et seq.), is

“ . . . to administer a national network of lands and waters for the conservation, management and, where appropriate, restoration of the fish, wildlife, and plant resources and their habitats within the United States for the benefit of present and future generations of Americans.”

The NWRSAA mandates the Secretary of the Interior in administering the System to (16 U.S. Code 668dd[a][4]):

- provide for the conservation of fish, wildlife, and plants, and their habitats within the Refuge System ;
- ensure that the biological integrity, diversity, and environmental health of the Refuge System are maintained for the benefit of present and future generations of Americans;
- ensure that the mission of the Refuge System described at 16 U.S. Code 668dd(a)(2) and the purposes of each refuge are carried out;
- ensure effective coordination, interaction, and cooperation with owners of land adjoining refuges and the fish and wildlife agency of the states in which the units of the Refuge System are located;
- assist in the maintenance of adequate water quantity and water quality to fulfill the mission of the Refuge System and the purposes of each refuge;
- recognize compatible wildlife-dependent recreational uses as the priority general public uses of the Refuge System through which the American public can develop an appreciation for fish and wildlife;
- ensure that opportunities are provided within the Refuge System for compatible wildlife-dependent recreational uses;
- monitor the status and trends of fish, wildlife, and plants in each refuge.

Therefore, it is a priority of the Service to provide for wildlife-dependent recreation opportunities, including hunting and fishing, when those opportunities are compatible with the purposes for which the refuge was established and the mission of the Refuge System.

1.3 Purpose and Need for the Proposed Action

The purpose of this proposed action is to provide compatible wildlife-dependent recreational opportunities on Seier NWR. The need of the proposed action is to meet the Service’s priorities and mandates as outlined by the NWRSAA to “recognize compatible wildlife-dependent recreational uses as the priority general uses of the NWRS” and “ensure that opportunities are provided within the Refuge System for compatible wildlife-dependent recreational uses” (16 U.S. Code 668dd[a][4]). This action satisfies Executive Order 13443 signed August 16, 2007, “Facilitation of Hunting Heritage and Wildlife Conservation,” Secretary’s Order 3347 signed March 2, 2017: Conservation Stewardship and Outdoor Recreation, and Secretary’s Order 3356 signed September 15, 2017: Hunting, Fishing, Recreational Shooting, and Wildlife Conservation Opportunities and Coordination with States, Tribes, and Territories. The proposed action also helps to accomplish a goal in the conceptual management plan to facilitate compatible, wildlife-dependent recreational opportunities on refuge lands.

2.0 Alternatives

2.1 Alternatives Considered

Alternative A – Open Seier National Wildlife Refuge to Hunting of Resident Game Species and Migratory Birds – Proposed Action Alternative

The refuge has prepared a hunting plan, which is presented in this document as the Proposed Action Alternative.

Under the Proposed Action Alternative, the Service would open the refuge to hunting of resident game and migratory birds according to state and federal regulations. Resident game is all non-migratory wildlife hunted in Nebraska under the Nebraska Game and Parks Commission (NGPC) hunting regulations. Resident game species are white-tailed deer, mule deer, pronghorn antelope, elk, badger, beaver, bobcat, coyote, fox, long-tailed weasel, mink, muskrat, opossum, prairie dog, porcupine, rabbit and hare, raccoon, skunk, squirrel, woodchuck, greater prairie chicken, grouse, partridge, pheasant, quail, and turkey. Migratory Birds are waterfowl, dove, crow, rail, snipe, and woodcock.

Refuge-specific regulations would be published in the Federal Register as part of the 2020–2021 Refuge-Specific Hunting and Sport Fishing Regulations.

- Dog use would not be allowed during the nesting season of ground nesting birds.
- Camping would not be allowed
- Non-toxic shot would be required for all shotgun use

Mitigation Measures to Avoid Conflicts:

- Because the refuge is not currently open to any public use, opening the refuge to hunting would not conflict with other uses.

This alternative would offer increased opportunities for public hunting and fishing and fulfills the Service’s mandate under the Improvement Act. The Service has determined that the hunting plan is compatible with the purposes of the refuge and the mission of the Refuge System.

Alternative B – Current Management Strategies – No Action Alternative

Under this alternative, the Seier NWR would remain completely closed to all public use. Refuge habitat management would continue.

2.2 Alternative(s) Considered, But Dismissed from Further Consideration

There was some discussion of opening the refuge for a more limited hunt such as a special youth hunt. A special hunt would require staff and time to administer. Given the lack of staffing and the remoteness of the refuge from any other staffed refuges, we, the Service, decided to open the refuge up to everyone.

3.0 Affected Environment and Environmental Consequences

3.1 Affected Environment

The boundary of the Seier NWR is approximately three miles northwest of Rose, Nebraska, in Rock County. The 2400-acre refuge is divided into two parcels. The east unit of the refuge is 800 acres and is in sections 19, 20, and 29, T. 26 N., R. 19 W. The largest tract of the refuge, the west unit, is 1,600 acres, and is 1 ½ miles west of the 800 acre east unit. This 1,600-acre tract is located in sections 25, 26, 27, 34, and 35, T. 26 N., and R. 20 W. This tract contains the old ranch headquarters in the northwest corner of the southwest quarter of section 25.

The predominate habitat of the refuge is upland Sandhill Prairie. Approximately 755 acres of the easterly parcel (94 percent) is upland grassland. The western parcel is also primarily grassland, with 1,250 acres (78 percent) of Sandhill Prairie. Combined, the entire refuge has 2,005 acres of native prairie (83 percent). The Sandhill Prairie on the refuge is composed of both sand and choppy sand range sites. Grasslands are dominated by cool season grasses brome and Kentucky blue grass, stipa, and other species. Highly palatable herbaceous species, such as leadplant, are abundant. Very few blowouts exist, and the endangered blowout penstemon has not been observed.

The next major habitat type present on the refuge is wetlands. Approximately 370 acres of the refuge are wetlands. In the eastern 800 acres, small depressions in the Sandhill Prairie are present (less than 1 acre). Both temporary and seasonal wetlands are present and scattered across the tract. Approximately 30 acres of subirrigated meadow are present in the east unit. It is wet enough in most years that surface water is present in some of the meadow sites.

The other two major wetland areas were on the western tract. Bloody Creek, a usually intermittent stream, cuts across the ranch for 1¼ miles in sections 25 and 26. Approximately 60 acres of temporary, seasonal, and semipermanent wetlands exist alongside the creek, with an additional 140 acres of subirrigated meadow. Skull Creek, a permanent stream that empties into the Calamus River, flows across half a mile of the western portion of the ranch in sections 27 and 34. An estimated 90 acres of temporary, seasonal, and semipermanent wetlands are associated with the creek system with an additional 60 acres of subirrigated meadows. Portions of this low lying land along Skull Creek were farmed in the 1920s and 1930s. An old remnant ditch is still visible in the meadow. The subirrigated meadows are dominated by several sedge species with small amounts of rushes in pockets. Seasonal and semipermanent wetland plants (arrowhead, smartweed, cattail, and hardstem bulrush) exist in the depressions of the meadow and along flattened creek edges.

Several areas of the meadow possess fen-like characteristics of floating peat mats, two fern species, and unique sedges. It is unknown whether peat deposits and vegetation are sufficiently developed to be classified as fens, but at least some of these characteristics exist. Skull Creek appears to be spring fed with significant quantities of water upwelling in this valley. One well near the creek has artesian flow.

Within the Skull Creek meadow, stands of peachleaf willow are present. The stands are thin and scattered in clumps along the creek. Ground cover represented by this shrub habitat is no more than five acres, but it represents a habitat niche that is important to migrating songbirds in the Sandhills.

The last habitat of note is approximately 10 acres of cottonwood forest. These acres are old tree claims that were planted in the original homesteading of the Sandhills. Cottonwood trees are large with greater than 18 diameter at breast height (dbh) and over 60 feet in height.

Reproduction of ash and other species were present in the shade of these plantings. Tree plantings of this type are common in Rock County and Sandhill Counties to the east.

The refuge is in a very rural area. Bassett, Nebraska, 25 miles north, is the closest incorporated city, with a population of approximately 560 people. Land use is dominated by cattle grazing, but center pivot irrigated cropland is increasing.

Tables 1 through 6 provides additional, brief descriptions of each resource affected by the proposed action.

3.2 Environmental Consequences of the Action

This section analyzes the environmental consequences of the action on each affected resource, including direct and indirect effects. This EA only includes the written analyses of the environmental consequences on a resource when the impacts on that resource could be more than negligible and therefore considered an “affected resource.” Any resources that would not be more than negligibly affected by the action have been dismissed from further analyses.

Tables 1 through 5 provide:

- a brief description of the affected resources in the proposed action area;
- effects of the proposed action and any alternatives on those resources, including direct and indirect effects.

Table 6 provides a brief description of the cumulative impacts of the proposed action and any alternatives.

Impact Types:

- *Direct effects* are those that are caused by the action and occur at the same time and place.
- *Indirect effects* are those that are caused by the action and are later in time or farther removed in distance but are still reasonably foreseeable.
- *Cumulative impacts* result from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or non-federal) or person undertakes such other actions.

Table 1. Affected Natural Resources and Anticipated Direct and Indirect Impacts of the Proposed Action and Any Alternatives.

<p>Affected Resources</p>	<p><u>Alternative A (Proposed Action)</u> <i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i></p>	<p><u>Alternative B (No Action)</u> <i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i></p>
<p>Resident Big Game</p>		
<p><i>Elk</i> Elk herds once common across all of Nebraska became extinct by 1900. In the 1960s, a few elk returned to Nebraska, and in 1986 Nebraska had its first modern elk season. Since then, elk and have expanded into the hills and rivers of western Nebraska, and the annual passage of young bulls through eastern Nebraska is a common occurrence. More than 1,600 elk have been harvested since the first season in 1986.</p> <p><i>Pronghorn</i> The pronghorn is North America’s swiftest land mammal and one of the fastest in the world. Its speed, endurance, and keen eyesight are well adapted to the short-grass prairies and gumbo badland of the western United States. Herds were at the brink of extinction in Nebraska by 1907, when all hunting seasons were closed. Slow expansion occurred for the next 50 years, and hunting seasons have been held every year since 1958. (outdoornebraska.gov)</p>	<p>Pronghorn and elk are transient species on the refuge. Their harvest would likely be so low as to not affect the local population. Because their populations throughout the Sandhills are transient, their expected yearly harvest cumulatively would be 0–1 year.</p>	<p>No elk, pronghorn, or deer hunting would occur on the refuge. Deer congregate on the refuge in the fall due to hunting pressure on surrounding lands.</p>

<p style="text-align: center;">Affected Resources</p>	<p style="text-align: center;"><u>Alternative A (Proposed Action)</u></p> <p style="text-align: center;"><i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i></p>	<p style="text-align: center;"><u>Alternative B (No Action)</u></p> <p style="text-align: center;"><i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i></p>
<p><i>Deer</i></p> <p>Nebraska’s modern deer season began in 1945 with a harvest of 275 mule deer and two white-tailed deer from Nebraska National Forest, near Halsey. Since then, deer hunting has become a treasured tradition enjoyed by countless hunters, who have harvested more than 2.2 million deer. Careful management in the past five years has resulted in growth in mule deer herds and a reduction in white-tailed deer herds. Season recommendations for 2019 allowed a harvest of approximately 10,000 mule deer and 46,000 white-tailed deer. Population goals in 2019 are for slight increases in northern and eastern white-tailed deer herds and a modest reduction in mule deer herds in Southwest Nebraska and continued pressure on white-tailed deer along river corridors. Biologists would collect lymph nodes for chronic wasting disease (CWD) testing from deer taken in six Panhandle and Northeast deer units.</p> <p>The Sandhills are home to 55 species of mammals. The most abundant large mammals are mule deer and white-tailed deer. The Sandhills support a few elk and relatively small numbers of pronghorn, particularly in the west. (M. Humpert, Panella, M., Schneider, R., Steinauer, G., and Stoner, K. [Eds.]. 2011)</p>	<p>Deer would be taken from the refuge during hunting season. The NGPC would estimate deer populations and establish hunting seasons. We estimate that 10–15 deer may be harvested annually at the refuge.</p>	

<p>Affected Resources</p>	<p><u>Alternative A (Proposed Action)</u></p> <p><i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i></p>	<p><u>Alternative B (No Action)</u></p> <p><i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i></p>
<p>Upland Game</p>		
<p><i>Wild Turkey</i></p> <p>The wild turkey (<i>Meleagris gallopavo</i>) was extirpated from Nebraska by 1915, but thanks to successful reintroduction efforts beginning in the Pine Ridge in the 1950s, turkeys can be found across the state today. Reintroductions were three subspecies (Merriam’s, Rio Grande, and Eastern wild turkeys), as well as a hybrid between Merriam’s and a game-farm variety that was found to do well where earlier releases failed. The hybrid birds proliferated and intermingled with the pure strains as populations grew. Turkeys in the panhandle and Niobrara River valley are most consistent in showing plumage characteristics of the Merriam’s subspecies. The wild turkey is the largest upland game bird in North America. Adult Merriam’s toms taken in the fall season average 18 pounds and adult hens average 10 pounds. Hybrid birds can be heavier, weighing more than 25 pounds.</p>	<p>According to state records, 17,731 wild turkeys were harvested, with an estimated 61.3 percent hunting success rate during the 2018 turkey-hunting season in Nebraska. The refuge provides good habitat for turkeys, but currently there are no estimates (by the NGP or the refuge staff) on the size of the wild turkey populations on the refuge. Given the relatively small size of the refuge compared to all public lands in Nebraska open to turkey hunting, we expect that few hunters (between 0 and 2) would travel to this refuge to hunt wild turkeys. Given the state’s 61 percent turkey harvest success rate, we estimate that between 0 and 1 turkey could be harvested at the refuge during the upcoming wild turkey hunting season. Therefore, we consider the direct impacts of the local population to be negligible to the overall population in the state. Figure 2 depicts the turkey population in the Sandhills since 2000.</p>	<p>No turkey hunting would occur on the refuge.</p>

Affected Resources	<p align="center"><u>Alternative A (Proposed Action)</u></p> <p><i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i></p>	<p align="center"><u>Alternative B (No Action)</u></p> <p><i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i></p>
Furbearers and Non-Game Species		
<p>Nebraska has a wealth of furbearing species that provide opportunities for wildlife watching, photography, hunting, and trapping. Furbearers are a group of native mammals that have valuable fur. Furbearers with a harvest season are badger, beaver, bobcat, mink, muskrat, opossum, raccoon, red fox, gray fox, striped skunk, and long-tailed weasels. Coyotes, prairie dog, porcupine, and woodchuck are nongame and thus are not protected as furbearers; however, they are commonly harvested in Nebraska. Coyote are hunted for their fur when pelts are prime.</p> <p>The furbearing species that are harvested are common or abundant in Nebraska. Regulated harvest through hunting and trapping seasons is an important management tool needed to control populations and damage that these species can cause. Hunting and trapping seasons are typically designed to allow the harvest of furbearers during the fall and winter, when the pelts are prime, and they are less likely to have dependent young. There are no bag limits or specific harvest units for furbearers. Trapping and hunting furbearers is a time-honored tradition that provides the ability for families to enjoy time well spent in the great outdoors, earn extra income, and help mitigate problems.</p>	<p>A total of 7,005 fur harvest permits were sold to Nebraska residents in 2017 (down from 7,304 in 2016). Thirty-nine fur harvest permits were sold to non-residents from 14 different states (Colorado, Iowa, Illinois, Kansas, Michigan, Minnesota, Missouri, New Hampshire, Oklahoma, Pennsylvania, South Dakota, Texas, Wisconsin, and Wyoming). Resident fur harvest permit trends from 1943-2017 are shown in Figure 3.</p> <p>Harvest</p> <p>The estimated harvest during the 2017–2018 season was lower compared with the five-year average. Mink, raccoon, and opossum showed the greatest decrease (down 64 percent, 36 percent, and 20 percent, respectively). Coyote, muskrat, and bobcat showed an increase compared to the five-year average (up 27 percent, 10 percent, and 7 percent, respectively). The total estimated harvest for the 2017–2018 season was higher than that for the 2016/2017 season, with skunk, beaver, and coyote showing the greatest increase (up 49 percent, 36 percent, and 35 percent, respectively). Mink and woodchuck showed the greatest decrease from the 2016–2017 season (down 41 percent and 32 percent, respectively). Fur harvesters reported that 25 percent of coyotes and 4 percent of red foxes harvested showed symptoms of mange.</p> <p>2012–2016 5-Year Average Estimated Furbearer Harvest</p> <ul style="list-style-type: none"> • Raccoon 168,629 • Opossum 31,916 • Striped Skunk 13,300 • Badger 4,351 • Red Fox 3,446 • Mink 2,256 • Bobcat* 1,284 <p><i>* Total harvest based on pelt tagging, hunt column includes harvested road kills</i></p>	<p>Under the No Action Alternative, no furbearer hunting would occur on the refuge.</p>

Affected Resources	<u>Alternative A (Proposed Action)</u> <i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i>	<u>Alternative B (No Action)</u> <i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i>
	<p>The State of Nebraska encompasses nearly 800,000 acres of public lands on about 300 state and federally managed areas. Given the relatively small size of the refuge (2,400 acres, or 0.3 percent of the public lands in Nebraska), we expect that few hunters would visit this refuge to harvest furbearers (around five per year). If the hunting success rate and furbearer harvest trends at the refuge are similar to those for the rest of the state, we would expect that the furbearer harvest at the refuge would be:</p> <ul style="list-style-type: none"> • Raccoon: less than 6 • Opossum: less than 3 • Skunk: less than 3 • Badger: less than 2 • Red fox: less than 1 • Mink: less than 1 • Bobcat: less than 1 <p>Given these estimates, we anticipate that the total number of hunters hunting furbearers would have an insignificant effect on the overall population of furbearers in the local area.</p>	
Migratory Birds		
<p>The refuge contains small areas of emergent marsh, mudflats, and open water that annually support a few ducks, geese, coots, swans, and other migratory birds during fall and spring migrations.</p>	<p>The refuge is not covered by “Inviolate Sanctuary” protections as many other national wildlife refuges are. It was not acquired under the authorities that provide that statutory language. Migratory bird hunting would be implemented, for the first time, within the federal and state frameworks. Given that no hunting has ever occurred at this refuge before, there is no data to correctly estimate expected hunters and/or hunting visits.</p>	<p>We would preserve feeding and resting habitat for waterfowl throughout the refuge, and no migratory bird hunting would be allowed.</p>

<p>Affected Resources</p>	<p><u>Alternative A (Proposed Action)</u></p> <p><i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i></p>	<p><u>Alternative B (No Action)</u></p> <p><i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i></p>
<p>Common huntable waterfowl and migratory bird species are mallard, northern pintail, northern shoveler, gadwall, green-winged teal, blue-winged teal, American wigeon, Canada geese, Wilson’s snipe, Virginia and sora rail, dove, and crows. Open-water and diver waterfowl species, common goldeneye, redhead, canvasback, common merganser, red-breasted merganser, bufflehead, ruddy duck, and lesser scaup would be much less likely to occur.</p> <p>The refuge is located in the Central Flyway.</p>	<p>However, by using the most recent migratory bird harvest data (August 2019) for Nebraska, and expecting the same hunting success rate, though a much lower rate of hunting participation or pressure at the refuge when compared to the rest of Nebraska (due to the new opening) to assess likely harvest numbers at the refuge, we estimate the following harvest numbers:</p> <ul style="list-style-type: none"> • Mallard: 7 • Northern pintail: 1 • Northern shoveler: 1 • Gadwall: 2 • Green-winged teal: 2 • Blue-winged teal: 3 • Wigeon: 1 • Canada goose: 8 • Wilson’s snipe: 0-1 • Virginia rail: 0-1 • Sora rail: 0-1 • Dove: 40 • Crow: 10 <p>Therefore, we consider that opening the refuge to migratory bird hunting would not significantly affect the overall migratory bird populations at the flyway and national levels.</p> <p>Disturbance to migratory birds other than direct take would be temporary (limited to the hunting season) and minimal. All access is by foot. There are no lakes to support boat use disturbance. There are no roads within the refuge to support vehicle use disturbance.</p>	

<p>Affected Resources</p>	<p><u>Alternative A (Proposed Action)</u></p> <p><i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i></p>	<p><u>Alternative B (No Action)</u></p> <p><i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i></p>
<p>Other Wildlife and Aquatic Species</p>		
<p>The refuge is located in the Sandhills of north-central Nebraska. The refuge is a unique and ecologically important component of the Refuge System. The native Sandhills prairie and wetlands found here support a diversity of wildlife. Little has changed since historic times. The refuge is home to many species of birds, mammals, reptiles, and amphibians.</p>	<p>As previously explained, we expect hunting activities, hunting pressure, and the numbers of hunters to be low at this refuge due to the refuge’s size, availability of better-known and larger huntable public lands in the region, and the newness of hunting at the refuge. Therefore, we expect that disturbance to non-hunted wildlife species from hunting activities on the refuge would be minimal (few hunters) and temporary (limited to the hunting season). Furthermore, many non-hunted species would have migrated from the refuge when hunting activities begin. Direct effects on to non-hunted migratory birds such as songbirds (passerines), shorebirds, raptors, and swans are expected to be negligible. Indirect effects on this group of species are also minimal and do not appreciably reduce their numbers at the population level. Shorebirds and wading birds would not be affected by hunting because, in most cases, they have already migrated through the area prior to the fall hunting season. Disturbance to non-hunted migratory birds by hunting would not have substantial negative indirect effects because most hunting would not coincide with the nesting season. Other disturbance to these species by hunters afield would be temporary in nature.</p> <p>Migratory birds of prey (such as eagles and hawks) are on the refuge during most hunting seasons, but disturbance to them would be minimal. Disturbance to the daily wintering activities, such as feeding and resting, of residential birds might occur but would be insignificant because such interactions would be infrequent and of short duration when they did occur. Small mammals such as voles and mice are generally nocturnal or secretive. Both of these qualities make hunter interactions with small mammals very rare. Hibernation, or torpor, of cold-blooded reptiles and amphibians also limits their activity during most of the hunting season when temperatures are low. Hunters would rarely encounter reptiles and amphibians during most of the hunting season. Some species of butterflies and moths are migratory and would not be present for most of the refuge hunting season. Resident invertebrates are not active during cold weather and would have few interactions with hunters during the hunting season. Impacts on these species due to habitat disturbance related to hunting are negligible at the local and flyway levels.</p>	<p>This refuge is currently closed to all public uses. Therefore, under this alternative, there would continue to be no disturbance caused by human activities, and therefore no impacts on the refuge’s wildlife and plant species.</p>

<p>Affected Resources</p>	<p><u>Alternative A (Proposed Action)</u></p> <p><i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i></p>	<p><u>Alternative B (No Action)</u></p> <p><i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i></p>
	<p>Overall, hunting impacts on other wildlife and their habitats and impacts on the biological diversity of the refuge would be insignificant.</p> <p>Increased hunting may result in additional short-term disturbance to wildlife over a larger area. This disturbance may include temporary displacement of migratory and resident wildlife from foot traffic moving through the area.</p> <p>There is a possibility of conflict with birds of prey's feeding on dead furbearers that may contain lead fragments from bullets. Research has shown that lead is present in gut piles, but most furbearer hunters remove the entire carcass from the refuge to process off-site.</p>	
<p>Threatened and Endangered Species and Other Special Status Species</p>		
<p>Threatened and endangered species reported for Rock County, Nebraska, are whooping crane, piping plover, least tern, blowout penstemon, western prairie fringed orchid, American burying beetle, and northern long-eared bat.</p> <p>The refuge lies within the migratory path of whooping cranes and does present suitable migratory habitat. We have no reports of whooping cranes using the refuge.</p> <p>The refuge does not contain typical piping plover or least tern habitat. These birds are not documented on the refuge.</p> <p>The refuge is in the range for blowout penstemon and western prairie fringed orchids, although neither are documented on the refuge.</p> <p>American burying beetles probably occur on the refuge. They are seemingly common in the Nebraska Sandhills.</p>	<p>We do not expect this alternative to have any positive or negative effects on threatened and endangered species. None of the refuge lands that would be open to public hunting have been designated as critical habitat for any species listed as endangered or threatened under the Endangered Species Act of 1973, as amended.</p> <p>Whooping cranes may inhabit shallow wetland habitat during spring and fall migrations. As mitigation, all public use would be suspended if whooping cranes were located on the refuge.</p> <p>Additional hunting opportunities could create more forage for American burying beetles.</p>	<p>The No Action Alternative would not have any effect on threatened or endangered species because it has no public access to the refuge.</p>

Affected Resources	<u>Alternative A (Proposed Action)</u> <i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i>	<u>Alternative B (No Action)</u> <i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i>
There may be suitable brood rearing habitat for northern long-eared bats in the large trees around the homestead site and old windbreaks. None of these bats have been documented on the refuge.		
Vegetation		
See Affected Environment above.	The entire refuge would be open to hunting. We do not expect adverse impacts on the refuge's habitats and vegetation from hunting activities because (1) low number of hunters and hunting pressure, (2) refuge access would be limited to foot traffic (which would have only minor and temporary impact on vegetation from trampling), and (3) we do not anticipate an increase in invasive plant species present.	We do not anticipate impacts on the vegetation from continued closure of the refuge to public uses. Large ungulates and other wildlife do not congregate in this refuge in sufficient numbers to adversely affect the refuge's habitats from herbivory, burrowing, or other life-cycle activities.
Geology and Soils, Air Quality, Water Resources, and Floodplains		
	We do not expect impacts of these resources from implementation of this alternative.	We do not expect impacts of these resources from continued implementation of this alternative.

Table 2. Affected Visitor Use and Experience and Anticipated Direct and Indirect Impacts of the Proposed Action and Any Alternatives.

Affected Resources	<u>Alternative A (Proposed Action)</u> <i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i>	<u>Alternative B (No Action)</u> <i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i>
There is currently no visitor use of the refuge. It is not open to the public.	We anticipate a few hundred hunter use days per year to start. This number may go up, but due to the small size of the refuge, hunter presence would decrease the abundance of huntable game. Because the open hunt area is highly visible and is otherwise off-limits all year to other members of the public, allowing hunters may cause a perception of favoritism for one user group over another. This could be alleviated in the future, if necessary, by opening the hunt area to the general public for other uses such as photography, wildlife observation, and interpretation.	Continued closure of the refuge to public uses would have negative impacts on the quality of the experience of possible visitors to the refuge, the public perception of the Refuge System and the Service, and the availability of outdoor recreational opportunities.

Key: NWR = National Wildlife Refuge

Table 3. Affected Cultural Resources and Anticipated Direct and Indirect Impacts of the Proposed Action and Any Alternatives.

Affected Resources	<u>Alternative A (Proposed Action)</u> <i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i>	<u>Alternative B (No Action)</u> <i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i>
Limited cultural resource studies have been conducted by the Service, or any other groups, to locate and describe and evaluate cultural and paleontological resources. Current protection and interpretation of cultural and paleontological resources is minimal. The Seier Ranch buildings have been evaluated and found to not be worthy of special protection. Almost all buildings are destined for removal or destruction.	We do not expect impacts on these resources from implementation of this alternative.	We do not expect impacts on these resources from continued implementation of this alternative.

Key: NWR = National Wildlife Refuge

Table 4. Affected Refuge Management and Operations and Anticipated Direct and Indirect Impacts of the Proposed Action and Any Alternatives.

Affected Resources	<u>Alternative A (Proposed Action)</u> <i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i>	<u>Alternative B (No Action)</u> <i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i>
Land Use		
<p>Predominate land use in Rock County is native prairie grazing and haying. Family-owned ranching is the primary source of income. The permitting of some grazing and haying on Service lands benefits the local economy, as do the in-lieu-of-tax payments made to Rock County for Service lands. Grazing of the refuge is awarded to the high bidder in years that portions of the refuge are grazed.</p>	<p>The refuge would continue to engage in habitat management activities during the hunting season to ensure that the refuge meets its other management objectives (see Refuge Annual Performance and Plan [RAPP]). Impacts would be decreased by ensuring that hunters, cooperators, and partners are aware of each other’s activities and timed to reduce conflict, when possible. No impacts are anticipated to habitat, buildings, infrastructure, traffic or roadways. We anticipate a negligible increase in traffic on local or adjacent roadways but no increased cost or impacts on infrastructure.</p>	<p>No impact.</p>
Administration		
<p>The hunting program is designed to be administered with minimal refuge resources. The costs of administering and enforcing the refuge hunting program comes out of the refuge’s annual budget. Expenses include program management, staff resources, boundary posting, signage, brochures, parking lot construction, facility maintenance, gate installation, and other hunting specific activities.</p> <p>Law enforcement of refuge and state hunting regulations, and trespass and other violations associated with management of the refuge, are the responsibility of a refuge law enforcement officer. Refuge officers cooperate with, and are assisted by, state and county officers as well as state conservation officers. Ongoing coordination and communication between refuge staff and law enforcement officers is conducted throughout the year.</p>	<p>Refuge law enforcement would be stretched much thinner with implementation of the Proposed Action Alternative. This would add approximately 5 percent to the overall time required of the Sandhills Complex’s single officer. With only one officer, this time would reduce the time spent at the other six refuges within the complex. Overtime funding or extra detail officers would be needed to provide even minimal law enforcement.</p> <p>Some additional time would be required of refuge management and maintenance staff to administer the hunt, coordinate with the NGPC, and support parking lots, fences, and gates.</p>	<p>No additional increase in costs for administration, law enforcement, biological monitoring and research, or annual maintenance would be required for the No Action Alternative.</p>

Key: NGPC = Nebraska Game and Parks Commission; NWR = National Wildlife Refuge; RAPP = Refuge Annual Performance and Plan

Table 5. Affected Socioeconomics and Anticipated Direct and Indirect Impacts of the Proposed Action and Any Alternatives.

<p>Affected Resources</p>	<p><u>Alternative A (Proposed Action)</u> <i>The Service would open Seier NWR to hunting of resident game and migratory birds according to state and federal regulations.</i></p>	<p><u>Alternative B (No Action)</u> <i>Seier NWR would remain closed to all public use. Refuge habitat management would continue.</i></p>
<p>Local and Regional Economics</p>		
<p>The refuge is located approximately 25 miles from the city of Bassett, Nebraska, with a population of 560. A few other small towns are also within 30–90 miles away. The predominant land uses in the vicinity of the refuge are grazing, and irrigated farming. The refuge has no visitation other than what occurs by people driving the county and township roads around the refuge.</p> <p>More than 53.6 million visits were made to refuges in fiscal year 2017; these visits generated \$3.2 billion in sales, over 41,000 jobs, and \$1.1 billion in employment income in regional economies. About 86 percent of total recreation-related expenditures are generated by non-consumptive activities on refuges. Fishing accounted for 10 percent and hunting 4 percent of expenditures (Caudill, James and Erin Carver 2019).</p> <p>Nebraska claims \$848 million in economic impact annually from hunting (Nebraska Game and Parks Information Guide, January 31, 2017).</p>	<p>The addition of hunting under this alternative would likely benefit the state and local economy through revenues generated by hunter lodging, food, gas, and miscellaneous purchasing.</p> <p>The proximity of this site to other states (South Dakota, Wyoming, Colorado, Kansas, Iowa, and Minnesota) is likely to attract out-of-state hunters and furbearer harvesters to visit this refuge to pursue outdoor recreational opportunities. Wildlife and furbearer harvest data gathered by the state show that out-of-state hunters visit Nebraska to recreate in the state during the various hunting seasons.</p> <p>We would expect that the increase in the number of hunters would persist and probably grow over time, having a positive impact on the local and state economy.</p>	<p>No Impact.</p>
<p>Environmental Justice</p>		
<p>Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, requires all federal agencies to incorporate environmental justice into their missions by finding and addressing disproportionately high or adverse human health or environmental effects of their programs and policies on minorities and low-income populations and communities.</p>	<p>The Service has not identified any potential high and adverse environmental or human health impacts from this proposed action or any of the alternatives. The Service has identified no minority or low-income communities within the impact area. Minority or low income communities would not be disproportionately affected by any impacts from this proposed action or any of the alternatives.</p>	<p>Impacts would be the same as described under the Proposed Action Alternative.</p>

Key: NWR = National Wildlife Refuge

3.3 Cumulative Impact Analysis

Cumulative impacts are defined as “the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or non-federal) or person undertakes such other actions” (40 CFR 1508.7). Cumulative impacts are the overall, net effects on a resource that arise from multiple actions. Impacts can “accumulate” spatially when different actions affect different areas of the same resource. They can also accumulate over the course of time from actions in the past, the present, and the future. Occasionally, different actions counterbalance one another, partially cancelling out each other’s effects on a resource. But more typically, multiple effects add up, with each additional action contributing an incremental impact on the resource.

Table 6. Anticipated Cumulative Impacts of the Proposed Action and Any Alternatives.

Other Past, Present, and Reasonably Foreseeable Activity Impacting Affected Environment	Descriptions of Anticipated Cumulative Impacts
Hunting	
<p>Total duck and goose harvest in the United States from 2016–2017 was estimated at 12,115,800 (±4 percent) ducks and 3,602,500 (±5 percent) geese (USFWS 2018). For the period of 2016–2017, annual duck harvests for the Central Flyway averaged 2,429,000 (±14 percent) ducks and during the same period, annual goose harvests for the Central Flyway averaged 1,061,500 (±11 percent) geese (Raftovich et al. 2018).</p> <p>For the period 2018–2019, the number of hunters and annual harvest for different resident game species in Nebraska can be found at http://outdoornebraska.gov.</p> <p>Public hunting areas near the refuge are Calamus Reservoir WMA, Twin Lakes R.C. WMA, South Pine WMA, and yellowthroat (FWS) WMA.</p>	<p><i>Migratory Birds</i></p> <p>Migratory bird populations throughout the country are managed through an administrative process known as flyways. The refuge is located in the Central Flyway. In North America, the process for establishing hunting regulations is conducted annually. In the United States, the process involves a number of scheduled meetings (that is, Flyway Study Committees, Flyway Councils, Service Regulations Committee) where information on the status of migratory bird populations and their habitats is shared with individuals of agencies responsible for setting hunting regulations. In addition, public hearings are held and the proposed regulations are published in the Federal Register to allow public comment.</p> <p>Annual waterfowl assessments are based upon the distribution, abundance, and flight corridors of migratory birds. An Annual Waterfowl Population Status Report is produced each year and has the most current breeding population and production information available for waterfowl in North America (USFWS 2018). The report is a cooperative effort by the Service, the Canadian Wildlife Service, various state and provincial conservation agencies, and private conservation organizations. An Annual Adaptive Harvest Management Report provides the most current data, analyses, and decision-making protocols (USFWS 2017). These reports are intended to aid the development of waterfowl harvest regulations in the United States for each hunting season. Coot, moorhen, and rail species are also counted and analyzed.</p> <p>Each state selects season dates, bag limits, shooting hours, and other options using guidance in these reports. The refuge follows the regulations set by the State of Nebraska.</p> <p>The Service believes that hunting on the refuge would not add significantly to the cumulative impacts of migratory bird management on local, regional, or Central Flyway populations.</p>

Other Past, Present, and Reasonably Foreseeable Activity Impacting Affected Environment	Descriptions of Anticipated Cumulative Impacts
	<p>This is because the percentage likely to be taken on the refuge, though possibly additive to existing hunting takes, would be a very small fraction of the estimated populations. In addition, overall populations would continue to be observed, and future harvests would be adjusted as needed under the existing flyway and state regulatory processes. Several points support this conclusion:</p> <ul style="list-style-type: none"> • The proportion of the national waterfowl harvest that occurs on national wildlife refuges is only 6 percent (USFWS 2013). • There are no populations that exist wholly and exclusively on national wildlife refuges. • Annual hunting regulations within the United States are established at levels consistent with the current population status. • Refuges cannot permit more liberal seasons than provided for in federal frameworks. • Refuges purchased with funds derived from the Federal Duck Stamp must limit hunting to 40 percent of the available area. <p>As a result, changes or additions to hunting on the refuge would have minor effects on migratory birds in Nebraska. Although the Proposed Action Alternative would increase hunting opportunities compared to the No Action Alternative, the slight increase in hunter activity would not rise to a significant level. Estimated cumulative impacts of expanded waterfowl hunting on Seier NWR is shown in Table 7.</p> <p>Resident Birds and Mammals</p> <p>The NGPC manages resident bird and mammal populations in the State of Nebraska. The state selects season dates, bag limits, shooting hours, and other options using data obtained from monitoring efforts and harvest reports.</p> <p>We estimate that there might be approximately five hunters that hunt furbearers on the refuge. The potential harvest of resident game, furbearer, and other species on the refuge is likely negligible in proportion to regional or state harvest numbers and would not add significantly to the cumulative impacts on resident bird and mammal populations in Nebraska. Estimated cumulative impacts of hunting furbearers and resident birds on Seier NWR is shown in Table 8.</p>
Use of Lead Ammunition	
<p>Lead ammunition is permitted for use in rifles. It is prohibited for use in shotguns.</p> <p>Research has shown that lead can be present in gut piles left by deer hunters after field dressing. Bald eagles and other raptors feed on the gut piles and may ingest the lead, leading to poisoning.</p>	<p>Under the proposed alternative, the refuge represents only a very small portion of hunting that would allow the use of lead ammunition (deer and furbearers). We expect that fewer than 10 rifle hunters/year would visit the refuge to hunt (there were over 18,000 hunting licenses issued in Nebraska in 2019). The continued allowance of lead bullets for hunting of some species is estimated to have a negligible impact on the cumulative impacts of lead in the environment. This impact would be lessened by the retrieval of the harvested animal and the proper disposal of the bullet. The Service’s hunting program can be adjusted to ensure that it does not contribute further to the cumulative impacts of lead on refuge habitats or wildlife.</p>

Other Past, Present, and Reasonably Foreseeable Activity Impacting Affected Environment	Descriptions of Anticipated Cumulative Impacts
Climate Change	
<p>Ecological stressors are expected to affect a variety of natural processes and associated resources in the future. Precipitation availability may significantly affect the number of potholes available to breeding waterfowl. These habitat changes may dramatically reduce the amount and quality of both grassland and wetland for migratory birds that are hunted. As a result, wildlife would be displaced into other areas of available habitat.</p>	<p>While the impacts of climate change on the refuge wildlife and habitats are not certain, expanding hunting on the refuge would not add to the cumulative impacts of climate change because the refuge uses an adaptive management approach for its hunting program, consistently monitoring and reviewing the hunting program annually and revising annually (if necessary). The Service would adjust the hunting program as necessary to ensure that it would not contribute further to the cumulative impacts of climate change on resident wildlife and migratory birds.</p>

3.4 Monitoring

Inventory and monitoring of wildlife and their habitats would be done on the refuge in conjunction with our state and federal partners. In addition, the refuge would stay knowledgeable on the status of threatened and endangered species through consultation and local monitoring.

3.5 Summary of Analysis

The purpose of this EA is to briefly provide sufficient evidence and analysis for determining whether to prepare an Environmental Impact Statement or a Finding of No Significant Impact.

Alternative A – Proposed Action Alternative

As described above, this alternative would open the refuge to hunting of resident game and migratory birds according to state and federal regulations. Resident game covers all non-migratory wildlife hunted in Nebraska under the NGPC hunting regulations. Resident game species are white-tailed deer, mule deer, pronghorn antelope, elk, badger, beaver, bobcat, coyote, fox, long-tailed weasel, mink, muskrat, opossum, prairie dog, porcupine, rabbit and hare, raccoon, skunk, squirrel, woodchuck, greater prairie chicken, grouse, partridge, pheasant, quail, and turkey. Migratory Birds are waterfowl, dove, crow, rail, snipe, and woodcock.

We anticipate that this action would have minimal impacts on the refuge. The potential take of most resident and migratory wildlife species open to hunting on the refuge is likely negligible in proportion to regional or state harvest numbers and would not add significantly to the cumulative

effects on the various species. Direct impacts on refuge populations of some species (for example, turkey or deer) would not be known until the hunting program is implemented. Expanded hunting opportunities would most likely result in increased temporary disturbance/displacement of hunted and non-hunted wildlife species from foot traffic moving through the area or from gunfire. There would be no impact on Threatened and Endangered species. There would be no conflict with other public uses, because there are currently no other public uses of the refuge. There would be a minimal impact on refuge management. The one negative aspect of this opening is that law enforcement would not be adequate or it would reduce enforcement activities at other refuges in the Sandhills Refuge Complex.

This alternative would help meet the purpose and needs of the Service as described above, because it would provide additional wildlife-dependent recreation opportunities on the refuge, meeting the Service’s priorities and mandates. This alternative also would help align Service regulations with state regulations in an effort to make hunting more accessible and understandable by the American public. The Service has determined that the proposed action would be compatible with the purposes of the refuge and the mission of the Refuge System.

Alternative B – No Action Alternative

The No Action Alternative would not change use of, or have any impacts on, the refuge. It does not provide compatible wildlife-dependent recreational opportunities. It does not satisfy current Executive and Secretarial Orders to facilitate or provide more hunting opportunities on national wildlife refuges. It does not accomplish the goal in the Conceptual Management Plan to facilitate compatible, wildlife-dependent recreational opportunities on refuge lands. It does not satisfy the Purpose and Need statement of this Environmental Assessment.

3.6 List of Sources, Agencies and Persons Consulted

- Kelly Corman, Area Biologist, Nebraska Game and Parks Commission

3.7 List of Preparers

Name	Position	Work Unit
Steven A. Hicks	Project Leader	Sandhills Refuge Complex

3.8 State Coordination

On July 10, 2018, NGPC leadership provided suggestions for expanded hunting and fishing opportunities on Service lands in Nebraska. Their input was consistent with the Department of Interior Secretarial Order 3356, “Hunting, Fishing, Recreational Shooting, and Wildlife Conservation Opportunities and Coordination with States, Tribes, and Territories.” The refuge reviewed the operations and regulations for neighboring State wildlife management areas, public lands administered by other agencies (for example, U.S. Forest Service), and other national wildlife refuges in Nebraska to find consistency, where possible. Additional conversations have occurred with local NGPC biologists in development of this draft EA and hunting plan. The Service will be sending a letter to the state summarizing efforts to increase hunting opportunity and align with state hunting regulations. We will continue to consult and coordinate on specific aspects of the hunting plan to ensure safe and enjoyable recreational hunting opportunities. In the near future, we will send a letter and the draft Environmental Assessment to the state asking to

coordinate with them to adjust the hunting plan to align, where possible, with state management goals.

Refuge manager Steve Hicks has also coordinated with Kelly Corman, Area Biologist, Nebraska Game and Parks.

3.9 Tribal Consultation

The Service mailed an invitation for comments to all tribes potentially affected by initiating an Environmental Assessment to open the refuge to hunting. The Service extended an invitation to engage in government-to-government consultation in accordance with Executive Order 13175.

3.10 Public Outreach

Seier NWR will make the public aware of the availability of the draft EA and hunting plan via public notices on the refuge’s website, through local newspapers, and in Fort Niobrara NWR headquarters office. During a 30-day public comment period, the Service will accept comments in writing, in person, electronically, or in any other form the public wishes to present comments or information. Upon close of the comment period, all comments and information will be reviewed and considered. The Final EA will address the comments submitted.

3.11 Determination

This section will be filled out upon completion of any public comment period and at the time of finalization of the Environmental Assessment.

- The Service’s action will not result in a significant impact on the quality of the human environment. See the attached “**Finding of No Significant Impact.**”
- The Service’s action **may significantly affect** the quality of the human environment and the Service will prepare an Environmental Impact Statement.
