

RCW Habitat Summary Information: Prior to clearing any suitable and potentially suitable foraging habitat from each lot, a table showing the number of pine trees greater than or equal to four inches diameter-at-breast-height (DBH; 4 ½ feet above ground level) recorded in two-inch diameter classes should be provided to this office, as well as a site map showing the distribution of pine trees greater than or equal to 8 inches DBH on the property.

Note: if you are not using a diameter tape, you will need to convert from circumference to diameter
 (diameter = circumference / π)

DIRECTIONS FOR MEASURING A TREE AND CONVERTING IT TO DBH: Take a tape measure and wrap it around the tree at 4 ½ feet off of the ground. Example: If the tree is 24 inches around you take that number and divide by π . $\pi = 3.1416$. 24 divided by 3.1416 = 7.6 inches

Diameter Inches	4 inches	4 to 5.9	6 to 7.9	8 to 9.9	10.11.9	12 to 13.9	14 +
Tally Box							

Please use the space below to provide a map of the lot showing distribution and size in diameter of the trees.
