2007 INITIAL SDSS DATASETS
& MODELS DEVELOPED

Spring 2012: Spatial Decision Support System (SDSS)

Risk to the Tortoise

Spring 2012: Spatial Decision Support System (SDSS)

The image displays two screenshots of the Desert Tortoise Recovery web application. The top screenshot is the 'Model Explorer' interface, featuring a navigation menu on the left with categories: Threats (Agriculture, Air pollution, Altered hydrology, Aqueducts, Captive Release or Escape, Caves & Earth Dams), Stresses (Altered behavior, Altered hatching success or sex ratios, Burning or smoke inhalation, Collection, Crushing), Population Effects (Change in Immigration/Emigration, Change in Mortality (Adult), Change in Mortality (Juvenile), Change in Reproductive Output), and Recovery Actions (Connect habitat (culverts/underpasses), Control dogs). The main area shows a map of California with a 'data explorer' button and the Redlands University logo. The bottom screenshot is the 'Data Explorer' interface, showing a detailed map of California with various geographical features and cities labeled. It includes a navigation toolbar with a compass, zoom in (+), zoom out (-), and a search icon. The map interface has a 'Topo' and 'Satellite' view selector, a 'Go to Bookmark' dropdown, and a 'Select a layer to add' dropdown. The Redlands University logo and version information 'login | disclaimer | v0.068' are also present. A 'Legend' button is visible at the bottom right of the map area.

& MODELS DEVELOPED

Spring 2012: Spatial Decision Support System (SDSS)

Overall Recovery Implementation Team (RIT) Process

Oct, Dec 2012: RIT In-person Meetings

Using a consensus-based framework, RIT workgroups prioritized:

- 1) Action proposals; and
- 2) Effectiveness monitoring & research topics

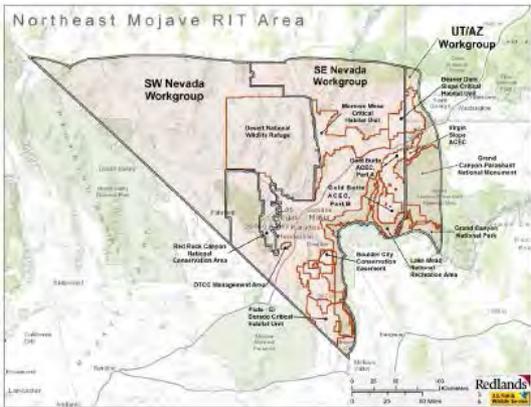

Recovery Action Plans v1

RECOVERY ACTION PLAN FOR THE MOJAVE DESERT TORTOISE IN CALIFORNIA

June 2013
Version 1

RECOVERY ACTION PLAN FOR THE MOJAVE DESERT TORTOISE IN THE NORTHEAST MOJAVE

June 2013
Version 1

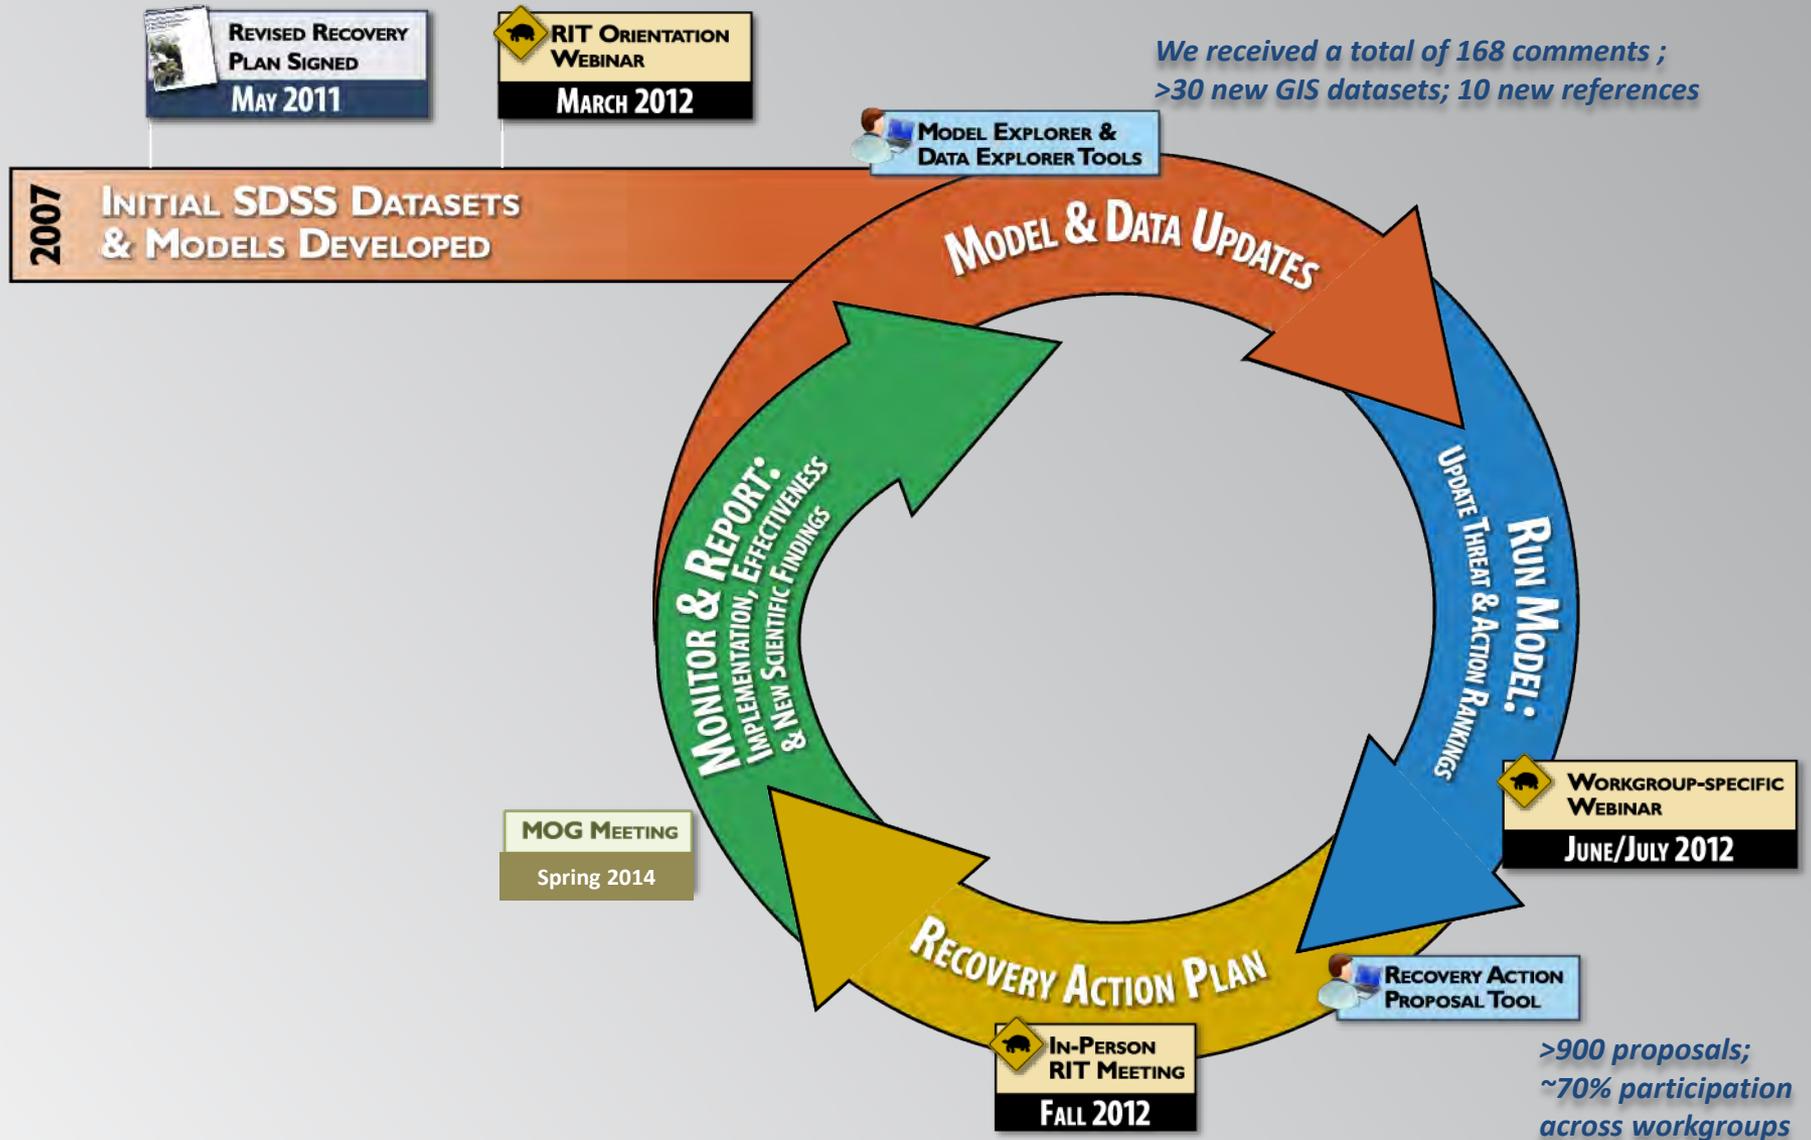

RECOVERY ACTION PLAN FOR THE MOJAVE DESERT TORTOISE IN THE UPPER VIRGIN RIVER

June 2013
Version 1

Recommendations for on-the-ground actions in need of funding to be considered by agencies as budgeting and planning opportunities arise

Overall Recovery Implementation Team (RIT) Process

Change in abundance of adult Mojave desert tortoises in each recovery unit

Recovery Unit	Modeled habitat (km ²)	2004	2012	Change
Western Mojave	23,139	152,967	76,644	-76,323
Colorado Desert	18,024	111,749	85,306	-26,443
Northeastern Mojave	10,664	13,709	40,838	27,129
Eastern Mojave	16,061	68,138	42,055	-26,083
Upper Virgin River	613	12,678	8,399	-4,280
Total	68,502	359,242	253,242	-106,000

MOG Direction

The MOG approved Recovery Action Plans (*version 1*) as part of a working process.

Specifically, the RITs should:

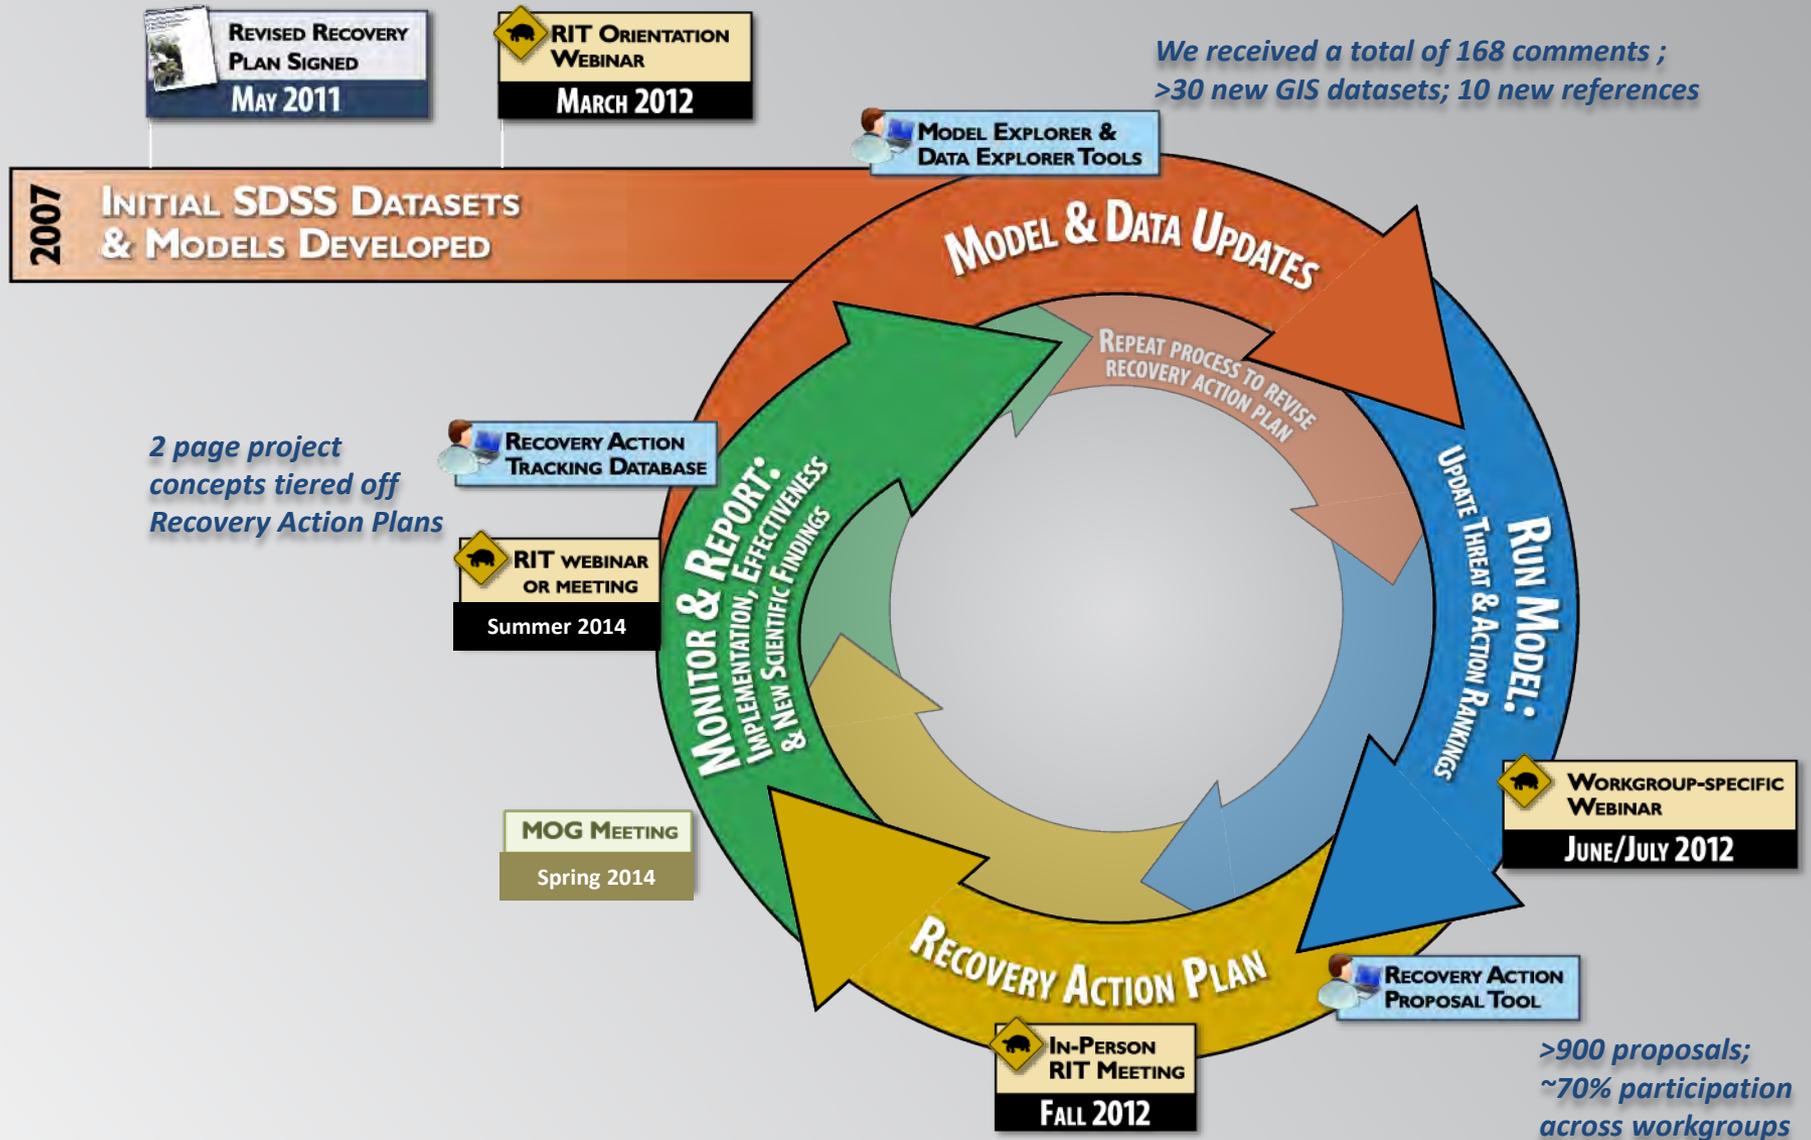

- Develop high-priority project proposals tiered off Recovery Action Plans
- Partner to leverage resources for project implementation
- Strive for resolution/consensus on actions with formal dissent for revision in v2
- Consider how to broaden stakeholder involvement without sacrificing RIT function
- Report annually to the MOG

MOG Direction

To assist the RITs, the Desert Tortoise Recovery Office (DTRO) will:

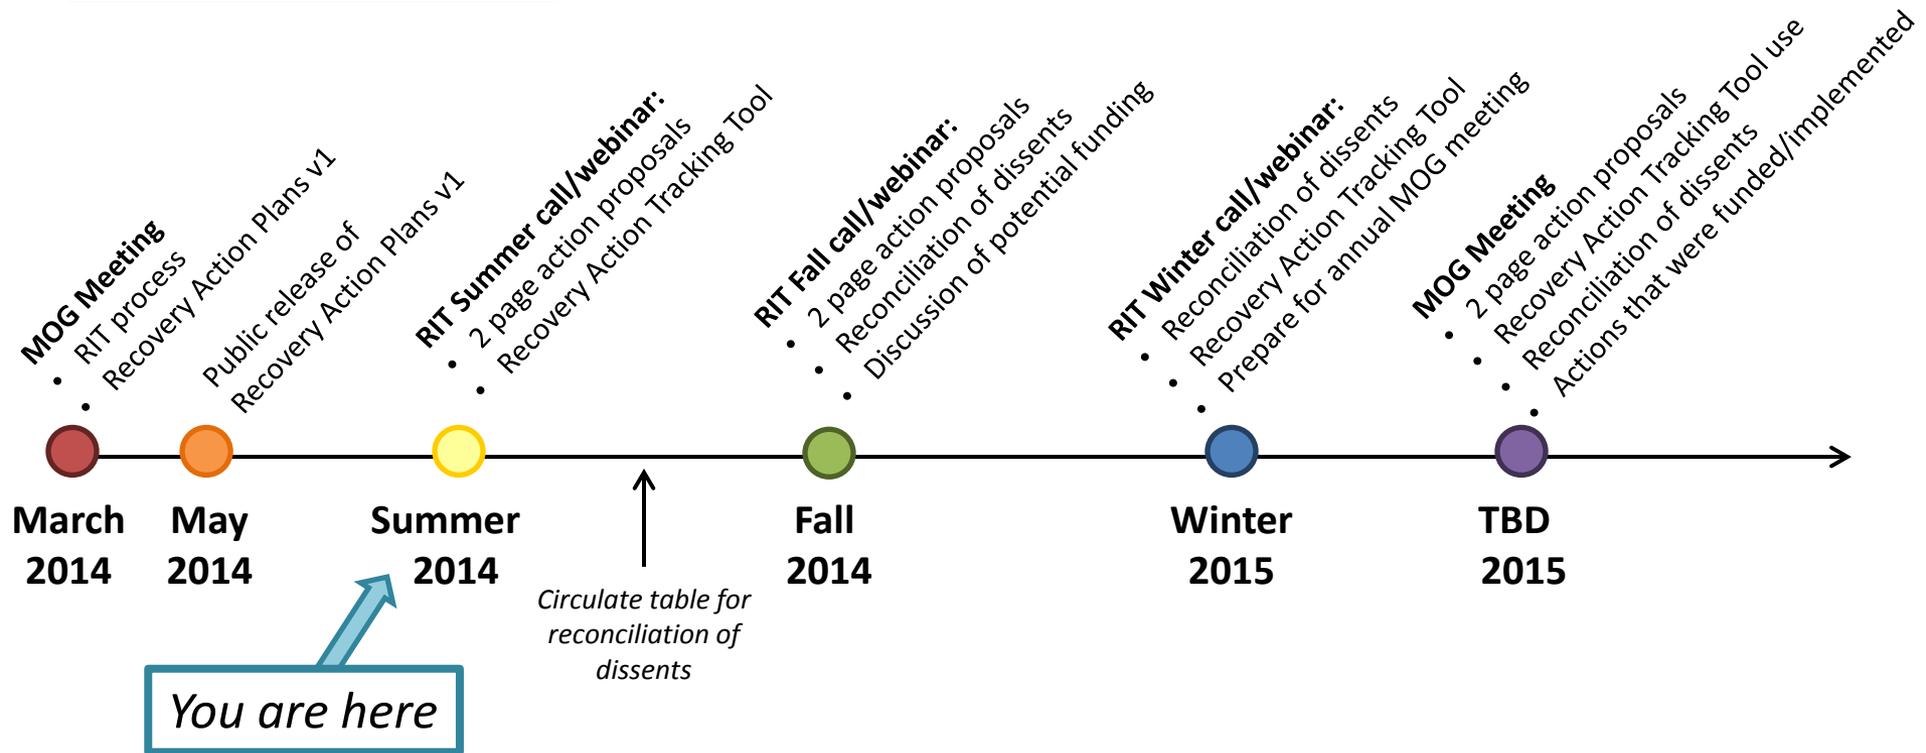

- Release Recovery Actions Plans v1 to public with language that states each is a working document; establish a mechanism for public comment
- Provide 2-page template for development of “shovel-ready” project concepts tiered off Recovery Action Plans
- Centrally track implementation of recovery actions for future reporting
- Facilitate discussion of recovery action recommendations that lack consensus
- Work with RITs to shape v2

Overall Recovery Implementation Team (RIT) Process

RIT Timeline & Next Steps

March 2014-March 2015

Timeline for development of v2 will depend on reconciliation of dissents and progress on implementing actions

(Potential in-person RIT meeting in 2015-16)

Questions?

2 page Action Proposals

2 Page Proposals: Homework

Develop project concepts for high-priority actions in workgroup area. Target at least 1 to 3 *complete* 2-page proposals for priority 1 actions per person.

Deadline: Friday, August 15th 2014

Sign and fence protected areas

Physically block and mark boundaries of protected areas (particularly in the Upper Virgin River RU), mitigation lands, translocation areas, research sites, military lands, and parks, particularly when an area is vulnerable to vehicular or livestock intrusion.

RIT Action Plan Items

The list of RIT Action Plan items is filtered to the selected action types and the RIT area(s) the action is in.

- Consider connectivity measures where appropriate
- Facilitate restoration of closed routes with vertical mulching prioritized during BLM monitoring within the Ord-Rodman Critical Habitat Unit - restore high priority routes first.
- Restore closed routes / illegal routes (vertical mulch) identified by BLM during implementation of Rout Monitoring Plan - restore high priority routes first.
- If any routes in area are closed provide appropriate closure and treatment to prevent their re-opening.
