

Bi-State DPS of Greater Sage-Grouse

Threats

Habitat Loss & Fragmentation

The primary threat to the Bi-State DPS of greater sage-grouse is habitat loss and fragmentation. The DPS is experiencing multiple, interacting impacts (i.e., synergistic effects) to the population and to its sagebrush habitat that are ongoing and expected to continue into the future such as:

Wildfire & Altered Fire Regime

Invasive and Non-Native Species Encroachment

Urban Development

Energy Development & Infrastructure
