

Copenhagen Wind Farm

Community Outreach and Communication Plan

Mission

OwnEnergy's mission is to complete the construction of the wind facility with the least amount of impact and inconvenience to the residents of Lewis County and its neighboring community.

Communications

OwnEnergy, Inc. (Project Sponsor) is committed to maintaining open communications with Lewis and Jefferson Counties and the Towns of Denmark, Rutland, Champion, and Watertown in order to maximize cooperation during the construction phase. A communication link with the Counties and Towns will be established prior to the commencement of construction of the wind facility. The communication link will be comprised of the Project Sponsor's Construction Manager and Outreach Coordinator, the respective Town's Code Enforcement Officers and Highway Superintendents, a representative of Lewis and Jefferson Counties, and the environmental monitor. Weekly scheduled meetings will provide open communications between the Project Sponsor and the local community.

An open communications policy will ensure that the community and County and Town officials are aware of the Project construction schedule. All equipment transportation schedules and transportation routes will be made public through the established communications link.

Prior to construction, the Project Sponsor will provide a documented record of all existing major roads and infrastructure that the Project will interact with. Coordination with the Highway Superintendents will occur prior to the documentation of existing conditions, and such documentation will be provided to emergency services, schools and through the established communications link. This record will help to resolve any construction or post-construction period concerns regarding existing roads and infrastructure.

Resolution Procedure

Prior to construction, the Project Sponsor will set up a toll-free number for use by the local residents. The toll-free number will be provided to the parties identified above (see "Communications"), as well as posted for the general public to access. In the event that a local resident has a question or concern, he/she will be able to voice the question or concern directly through the toll-free number. Any questions and concerns that the public may have can be addressed in the following ways:

- By calling the toll-free number
- In writing to the Copenhagen Wind Farm Project Manager at the Project office
- In person at the Copenhagen Wind Farm Construction site office

Upon receipt of a question or a concern, the Project Manager will contact the individual within 48 hours of receipt of complaint, and work with them in good faith to resolve the issue. The Project Sponsor is committed to resolving any and all concerns on a case-by-case basis. During the applicable construction period, a copy of any complaint received by the Project Sponsor will be provided to the environmental monitor, who will provide input as necessary to resolve the complaint. If the Project Manager and the individual do not mutually agree that a concern has been appropriately addressed, the Project Manager will refer the concern to upper-management within OwnEnergy, Inc., who shall continue to work with the individual to resolve the concern.

The Project Manager will log all received complaints and concerns, documenting the date and manner in which the complaint was resolved.
