SUPPLEMENTARY INFORMATION:

Background

Restoring an endangered or threatened animal or plant to the point where it is again a secure member of its ecosystem is a primary goal of our endangered species program. Recovery plans help guide recovery efforts by describing actions we consider necessary for the conservation of the species, establishing criteria for downlisting and delisting listed species, and estimating time and cost for implementing the measures needed for recovery measures. Under the provisions of the Endangered Species Act of 1973, as amended (Act) (16 U.S.C. 1531 et seq.), we approved the first Grizzly Bear Recovery Plan on January 29, 1982 (U.S. Fish and Wildlife Service 1982). In 1993, we approved a revision to the Grizzly Bear Recovery Plan (U.S. Fish and Wildlife Service 1993), which included additional tasks and new information that increased the focus and effectiveness of recovery efforts. Supplements to the Recovery Plan were approved in 1997 and 1998 (U.S. Fish and Wildlife Service 1997, 1998).

In 1994, The Fund for Animals, Inc., and 42 other organizations and individuals filed suit over the adequacy of the 1993 Recovery Plan. In 1995, the U.S. District Court for the District of Columbia issued an order remanding for further study and clarification four issues relevant to the Yellowstone grizzly bear population including the methods we use to measure the status of bear populations (Fund for Animals v. Babbitt, 903 F. Supp. 96 (D. D.C. 1995)). Following appeals by both parties, we entered into a subsequent settlement agreement to establish habitat-based recovery criteria prior to any delisting action, on June 17, 1997, we held a public workshop in Bozeman, Montana, to develop and refine habitat-based recovery criteria for the Yellowstone grizzly bear population. A Federal Register notice notified the public of this workshop and provided interested parties an opportunity to participate and submit comments (62 FR 19777, April 23, 1997). Grizzly Bear Recovery Plan Task Y423 also recommended further consideration of this issue, stating that we should work to “establish a threshold of minimal habitat values to be maintained within each Cumulative Effects Analysis Unit in order to ensure that sufficient habitat is available to support a viable population” (U.S. Fish and Wildlife Service 1993, p. 55). After considering 1,167 written comments, we developed biologically-based habitat criteria with the goal of maintaining or improving habitat conditions at 1998 levels. As per section 4(f) of the Act (16 U.S.C. 1533(f)), we published these draft criteria in the Federal Register for review and comment on July 16, 1999 (64 FR 38464). Considering all comments we received, we finalized the Habitat-Based Recovery Criteria. We have attached the established Habitat-Based Recovery Criteria to the Grizzly Bear Recovery Plan (U.S. Fish and Wildlife Service 1993) in a supplement.
