The applicant requests renewal of a captive-bred wildlife registration under 50 CFR 17.21(g) for the African hunting dog (Lycaon pictus), clouded leopard (Neofelis nebulosa), snow leopard (Uncia uncia), and spotted leopard (Panthera pardus) to enhance the species’ survival through captive propagation. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Los Angeles Zoo and Botanical Gardens, Los Angeles, CA; PRT–45687B

The applicant requests a permit to import two female mandrills (Mandrillus sphinx) from Zoo La Palmyre, France, for the purpose of enhancement of the survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Los Angeles Zoo and Botanical Gardens, Los Angeles, CA; PRT–43317B

The applicant requests a permit to import one male mandrill (Mandrillus sphinx) from Tierpark Ueckermünde, Germany, for the purpose of enhancement of the survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Close-Up Creatures, LLC, Naples, FL; PRT–19478A

The applicant requests amendment of their captive-bred wildlife registration under 50 CFR 17.21(g) for the clouded leopard (Neofelis nebulosa) and cheetah (Acinonyx jubatus) to enhance the species’ propagation or survival. The notification covers activities to be conducted by the applicant over the remainder of the 5-year period for which the permit would be valid.

Applicant: Wildlife Conservation Society, Bronx, NY; PRT–45536B

The applicant requests a permit to import two female captive-born southern pudus (Pudu puda) from Africam Safari, Mexico, for the purpose of enhancement of the survival of the species.

Applicant: Corey Knowlton, Royse City, TX; PRT–33291B

The applicant requests a permit to import the sport-hunted trophy of one male black rhinoceros (Diceros bicornis) taken from the wild in Namibia, for the purpose of enhancement of the survival of the species.

Applicant: Michael Luzich, Las Vegas, NV; PRT–33743B

The applicant requests a permit to import the sport-hunted trophy of one male black rhinoceros (Diceros bicornis) taken from the wild in Namibia, for the purpose of enhancement of the survival of the species.

Multiple Applicants

The following applicants each request a permit to import the sport-hunted trophy of one male bontebok (Damalisus pygargus pygargus) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancement of the survival of the species.

Applicant: Denis Ksarnosky, Burlington, WI; PRT–47740B; Applicant: Robert Patton, Fort Worth, TX; PRT–46007B; Applicant: Austin Pipkin, Houston, TX; PRT–48390B; Applicant: Albert Seeno, Concord, CA; PRT–46538B; Applicant: Don Byrne, Montgomery, TX; PRT–47538B;

B. Endangered Marine Mammals and Marine Mammals

Applicant: National Marine Mammal Laboratory, NOAA, Seattle, WA; PRT–212570

The applicant requests renewal of the permit to harass walrus (Odobenus rosmarus) and polar bear (Ursus maritimus) during aerial surveys in Alaska for the purpose of scientific research. This notification covers activities to be conducted by the applicant over a 5-year period.

Concurrent with publishing this notice in the Federal Register, we are forwarding copies of the above applications to the Marine Mammal Commission and the Committee of Scientific Advisors for their review.

Brenda Tapia,
Program Analyst/Data Administrator, Branch of Permits, Division of Management Authority.

Endangered and Threatened Wildlife and Plants; Final Recovery Plan for Georgia Pigtoe Mussel, Interrupted Rocksnail, and Rough Hornsnail

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability.

SUMMARY: We, the Fish and Wildlife Service, announce the availability of the final recovery plan for the endangered Georgia pigtoe mussel, interrupted rocksnail, and rough hornsnail. The final recovery plan includes specific recovery objectives and criteria the interrupted rocksnail and rough hornsnail would have to meet in order for us to downlist them to threatened status under the Endangered Species Act of 1973, as amended (Act). Recovery criteria for the Georgia pigtoe will be developed after we complete critical recovery actions and gain a greater understanding of the species.

ADDRESSES: You may obtain a copy of the recovery plan by contacting Jeff Powell at the Alabama Field Office, by U.S. mail at U.S. Fish and Wildlife Service, Alabama Field Office, 1208–B Main Street, Daphne, AL 36526, or by telephone at (251) 441–5858; or by visiting our recovery plan Web site at http://www.fws.gov/endangered/species/recovery-plans.html.

FOR FURTHER INFORMATION CONTACT: Jeff Powell (see ADDRESSES above).

SUPPLEMENTARY INFORMATION:

Introduction

We listed the Georgia pigtoe mussel (Pleurobema hanleyianum), interrupted rocksnail (Leptoxis foremani), and rough hornsnail (Pleurocera foremani) as endangered species under the Act (16 U.S.C. 1531 et seq.) on November 2, 2010 (75 FR 67512). All three species are endemic to the Coosa River drainage of the Mobile River Basin in Alabama and Georgia; the Georgia pigtoe also occurs in a Coosa River tributary in Tennessee. All three species have disappeared from 90 percent or more of their historical ranges, primarily due to impoundment of riverine habitats. A single population of interrupted rocksnail is known to survive in the Oostanaula River, Georgia. There are five localized populations of rough hornsnail, one each in Yellowleaf Creek, Alabama; lower Walnut Creek, Alabama; lower Hatchet and Weogufka Creeks,
Alabama; and the lower Coosa River, Alabama. Surviving populations of Georgia pigtoe occur in the Conasauga River, Georgia, and possibly in the Coosa River (Weiss Bypass), Alabama. Both the rough hornsnail and interrupted rocksnail are State listed as a Priority 1 (P1) species in Alabama, while the Georgia pigtoe is State listed as endangered in Georgia.

Approximately 258 km (160 mi) of stream channels in the Coosa River drainage have been designated as critical habitat for the interrupted rocksnail (101 km (63 mi)), rough hornsnail (27.4 km (17 mi)), and Georgia pigtoe mussel (153 km (95 mi)). Critical habitat is located in Cherokee, Clay, Coosa, Elmore and Shelby Counties, Alabama; Gordon, Floyd, Murray, and Whitfield Counties, Georgia; and Bradley and Polk Counties, Tennessee.

The Georgia pigtoe mussel has a Federal recovery priority number of 5, which indicates that the species faces a high degree of threat but also has a low recovery potential. The interrupted rocksnail and rough hornsnail both have a recovery priority number of 2, which indicates that both species are facing a high degree of threat but have a high recovery potential.

Background

Restoring an endangered or threatened animal or plant to the point where it is again a secure, self-sustaining member of its ecosystem is a primary goal of our endangered species program. To help guide the recovery effort, we prepare recovery plans for most listed species. Recovery plans describe actions considered necessary for conservation of the species, establish criteria for downlisting or delisting, and estimate time and cost for implementing recovery measures.

The Act requires the development of recovery plans for listed species, unless such a plan would not promote the conservation of a particular species. Section 4(f) of the Act requires us to provide public notice and an opportunity for public review and comment during recovery plan development. We will consider all information presented during a public comment period prior to approval of each new or revised recovery plan. We and other Federal agencies will take these comments into account in the course of implementing approved recovery plans.

We made the draft of this recovery plan available for public comment from July 3, 2013, through September 3, 2013 (78 FR 40162). We received no public comments. We considered the information received from peer reviewers in our preparation and approval of this final recovery plan.

Recovery Plan Components

The Service’s recovery objectives are to work to reduce threats so that the interrupted rocksnail and rough hornsnail may be downlisted to threatened status, and to prevent further decline of the Georgia pigtoe’s Conasauga River population and prevent extinction of the species as a whole. Defining reasonable downlisting or delisting criteria for the Georgia pigtoe is not possible at this time, given the current low number of populations and individuals, lack of information about the species’ biology, and magnitude of threats. Therefore, this recovery plan only establishes downlisting criteria for the two snails. Instead of establishing downlisting or delisting criteria at this time for Georgia pigtoe, we are identifying preliminary actions to help us prevent its extinction until we can obtain further information on this species and determine recovery criteria.

Downlisting of the interrupted rocksnail and rough hornsnail will be considered when we:

1. Protect and manage at least three geographically distinct populations for each species (to achieve this criterion, the populations can include the Oostanaula for the interrupted rocksnail and Yellowleaf Creek and Lower Coosa River for the rough hornsnail);
2. Achieve demonstrated and sustainable natural reproduction and recruitment in each population for each species as evident by multiple age classes of individuals, including naturally recruited juveniles, and recruitment rates exceeding mortality rates for a period of 5 years; and
3. Develop and implement habitat and population monitoring programs for each population.

The following actions are identified as necessary to help prevent the extinction of the Georgia pigtoe:

1. Maintain, and where possible conduct efforts to improve, the Conasauga River population;
2. Develop and implement a monitoring plan to evaluate population size in response to management actions;
3. Develop a captive propagation program and establish an ark population (a secure, maintained captive population) to help support the Conasauga River population;
4. Conduct research, such as identification of an appropriate fish host, that is important to gain better understanding of this mussel’s life history; and
5. Identify, monitor, and where possible improve potential reintroduction sites in the species’ historic range.

Authority

The authority for this action is section 4(f) of the Endangered Species Act, 16 U.S.C. 1533(f).

Dated: August 20, 2014.

Mike Oetker,
Acting Regional Director, Southeast Region.

Emergency Exemption; Issuance of Emergency Permit To Capture a Suspected Gray Wolf in the Area of the North Rim of the Grand Canyon, Arizona

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of issuance.

SUMMARY: The final rule to list the gray wolf as endangered throughout its range in the United States published in 1978. On October 6, 2014, a suspected gray wolf was seen wandering in the area of the North Rim of the Grand Canyon in Arizona. Deer hunting season is beginning in this area of Arizona, and it is believed that the wolf may be in danger of possible harm and could accidentally be shot either as a result of misunderstanding of status or misidentification. We, the U.S. Fish and Wildlife Service have, under an Endangered Species Act (ESA) permit, authorized qualified researchers to capture, draw blood, and possibly affix a brightly colored GPS radio collar on the suspect wolf and release it back into the general area where it was captured. It is essential for its safety to conduct these actions.

ADDRESSES: Documents and other information concerning the permit are available for review, subject to the requirements of the Privacy Act and Freedom of Information Act. Documents will be available for public inspection, by appointment only, during normal business hours at the U.S. Fish and Wildlife Service, 500 Gold Ave. SW., Room 6034, Albuquerque, NM 87103.

FOR FURTHER INFORMATION CONTACT: Susan Jacobsen, Chief, Division of Classification and Restoration, P.O. Box 1306, Albuquerque, NM 87103; (505) 248–6920.
