

RCW Matrix toolbar for ArcGIS Desktop 10.x Installation Instructions

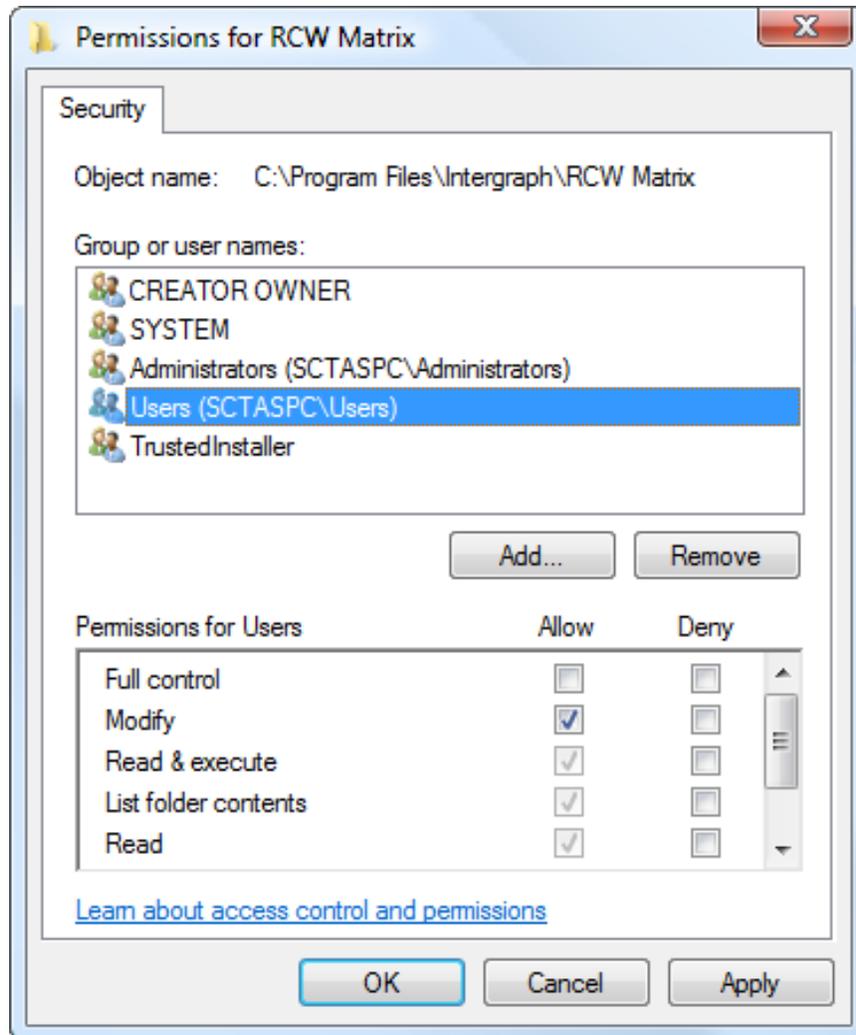

Recommended order of installation for the RCW Matrix toolbar is below:

- 1.) Install the Microsoft 3.5 .Net Framework and apply the most current service pack.
<http://www.microsoft.com/en-us/download/details.aspx?id=21>
- 2.) If not installed, Install ArcGIS Desktop version 10.x and apply the most current service pack.
- 3.) Install Crystal Reports Runtime for Visual Studio 2010, version 13.x, 32 bit version. It is not necessary to uninstall a resident 64 bit version, although the Matrix requires the 32 bit program. This program is downloadable from the RCW Matrix site and may already be installed if you had a previous version of the RCW Matrix installed before. It may also be downloaded from:
http://downloads.businessobjects.com/akdlm/cr4vs2010/CRforVS_redist_install_32bit_13_0_15.zip.
- 4.) Install the RCW Matrix toolbar for ArcGIS Desktop 10.x. Double click on "setup.exe" and follow the instructions for installation.
- 5.) Open ArcMap and turn on the RCW Matrix toolbar by clicking Customize→Toolbars→RCW Matrix. See the sample illustration below:

RCW Matrix toolbar for ArcGIS Desktop 10.x Installation Instructions

- 6.) This step is not always required but it's recommended. Your network administrator can assist you with this. From within Windows Explorer, grant the *Users* group **Modify** permissions to the 'C:\Program Files (x86)\Intergraph\RCW Matrix' directory. This *is not* a separate pop-up displayed by the RCW Matrix installation; it's just a Windows folder permission setting. See the sample illustration below:

We request that when you download the application, you send an email to rcwmatrixsupport@fws.gov with your name and contact information (including email, mailing address, and phone number) so that we can keep you informed of changes, improvements, or updated versions when they become available.
