All

The data that they provided likely has metadata, but depending on the format of the data and metadata, it likely will not automatically import into ScienceBase. When they submitted their data call data, it did not automatically import and I spent a significant amount of time manually providing SB metadata. I won't know until I see what they provided how it will import.

Hi all,

Would it not be more appropriate for blm to of the meta-data on their data?

Cheers

Kevin

Hi Kate,

I am happy to work on it, and I will work extra hours to get it up on ScienceBase and properly metadata'd, but I would like permission from Drue to do this first, as I have been directed to stay focused on the oil and gas model until it is finished. Generally, loading it on to SB doesn't take long, but depending on the format of their metadata, the metadata part can be time-consuming. Estimate of 6 hours.

As an aside, I had been told that the BLM was going to submit this themselves to ScienceBase. I guess that changed?

Pat, I will get back with Frank and Vicki tomorrow. Driving up from NM today.

Cheers,

Lara

If you'd be willing to upload it so it's accessible, I think that would be ideal. But I'm open to other ideas :)

Thanks, Lara!

Hi all,

I have not seen this disk yet, but from the description, I believe it contains the GIS data from the RMP decisions. Who should I give this drive to, or am I on task to upload and catalog the data it contains to ScienceBase?

Subject: Hard drive on your desk from BLM

To: Lara Juliusson <lara\_juliusson@fws.gov>

Hello!

Dave Carter just stopped by my office. He ran into a gentleman from BLM with a hard drive for you. We put it on your desk. BLM indicated that he wanted to get it to you before COB today, and that the drive has "all their data."

It's like Christmas!

Craig.
