Hi Ed,

I am going to go back through my notes regarding your question on datum. I think I remember that somewhere on the FAA page the datum is given.

When I created a vertical obstacles data set from the FAA data, I created one data set that was only non-wind, and one that was wind based on the attributes. Isn't there an attribute in there called "windmill"?

Lara, Do you think these data could include towers associated with wind? Jim did the wind and I shouldn't plot / calculate those towers?

If unsure on what towers are in the DOF, maybe I should use Jim's wind tower data to see if there is overlay?

Jim can I get a copy of the FAA wind tower data that you clipped to the Management Zones? I think you used that when looking at the USGS wind tower data. The DOF could possible have wind towers too. Don't know as they only classify as tower. Lara may know more.

Thanks, Ed
