Subject: GRSG: Comparing seasonal models in WY/NV to range-wide models

Hi all,

I wanted to get a time so we three can chat about evaluating the range-wide lek based models vs the telemetry based seasonal models. As we all talked about setting the stage for the differences in functional relationships between MZ's would also be a cool paper as a spin off.

Would next Friday work for you? I am trying to get tables and figures completed so I can get a review from Mevin Hooten and Doug Johnson on Wednesday. Thursday 8-12 I have a meeting with NRCS, so thursday afternoon would also work.

Cheers

Kevin
