Thanks Nick - that was very helpful!

I'm not sure that there are other GIS concerns with the map, but conversations are continuing so hang on! Appreciate you reaching out!

wait, I think I see it. on the CIG map the 'States' in the legend refers to the black surround for idaho, not the white area inside idaho, which are just areas that are not core, important, or general.

Hi Pat

I am the GIS person at IFWO. Maybe we can set up a webmeeting to chat about this, I am unclear what the problem is and it would help to see the layers/maps involved.

thanks

Nick

We need to verify which surface management layer is correct. I know that your map has Craters of the Moon and INEL as state lands and they are federal. But I don't know if there were errors on Lara's map. Maybe we just need to figure out what your GIS

person used for surface management and compare that to what Lara used and see if that helps clarify.

o.k. I think I found part of the problem. What is designated as state land on your map is designated as fed land on Lara's map. That discrepancy describes all but the little fingers. Not sure what the cause of the discrepancy is....

will send a pdf of Lara's map.

our GIS person put this together based on layers provided by Lara I believe.....we would like to excise areas where federal lands overlaps onto general and non-habitat.
