yep, part of the plan. The conifer model fell apart - it was planned. We found out when you did that it was significantly delayed. We are working on what that means!

have a good weekend!

One thing that would be helpful is any communication at all on modeling beside the occasional presentation at the higher up meetings (i.e., the thousand times we've seen the conceptual flow chart that contains absolutely no useful information)

For example, Jeff E was under the impression that there would be a model for conifer. Kevin said on call that it is very unlikely. News to me and Jeff was not on that call. I'm pretty sure Jeff was relying on having that information. Might in part explain nearly blank draft turned in the other day. After talking with Lief, sounds like we may still get some information, but not a model? who knows.
