---

Hello Ron, I wanted to give you a heads-up of where we are on numbers of Mining activity threats, Coal activity threats, and the Geothermal threats.

We needed a base-scale dataset for the analysis and the decision bouncing around at the meeting is most will look at Management Zone level, but Mike Thabault stressed the need for all information pertaining to the management zones, populations, PAC's, and PHMA/GHMA. He anticipates the need for such values at some time. Other managers agreed and Ted asked that we give you numbers for all those above elements.

As of midday Wednesday we still only had Draft BLM PHMA/GHMA data, GRSG Status Review IPA data, and the NVCA SG Management Categories data that needed to be combined in order to create the representation of current PHMA/GHMA. I started to combine these three datasets and it was a mess. Many slivers were created when combining these data and I had to make assumptions of what polygon areas to retain and which to remove. I informed Ted and he asked if I could just use current BLM Draft PHMA/GHMA at this time and update the overall analysis once data is received.

Lucky Lara was able to receive the latest PHMA/GHMA from BLM early Wednesday evening to replace the other options. The new dataset titled "ALLEIS\_PHMA\_GHMA\_ID\_3Cat\_DecNVCA".

Note: these new BLM data do differ spatially from the GRSG Status Review IPA data and the NVCA SG Management Categories data in some areas; but these are the latest from BLM and we should be using data created by BLM and not data that we alter to represent what BLM data should be.

The current base-scale analysis data is now a combination of the GRSG Status Review Management Zones, Populations, BLM PHMA/GHMA (just received ), and the PAC's data. Please note that when these data were combined we did get some slivers with population's value when combining the population's dataset and the PACs. These can be seen in the tables provided and we can discuss. The PACs data had a field for population and it did not always match with the actual population dataset values.

This seems to mainly be extremely small slivers, but some do need further investigation and

the GIS team will address these in the future. Also this is a draft base-scale analysis dataset just to get some numbers and the GIS team could update these data, if so I will run new numbers at that time.

I'm providing you a set of tables for the base-scale data and tables of the actual threats based on the GIS overlays. You can use the numbers from the base-scale tables if you need to do any area comparisons. The base-scale tables will give you total area acres for the management zones, acres of PH/GH habitat in each management zone, PAC size and name in each management zone (some may fall in the wrong MgmtZ but these are just slivers), area of the states that are in each management zone, EIS habitat names and size in each management zone, and populations by management zone. In populations you will see some listed as one name \_\_\_\_\_ "or" \_\_\_\_\_ the other name. Most of these will be extremely small slivers and the other ones we can discuss.

The Coal, Mining, and Geothermal analysis tables will give you the levels of Direct Impact or Indirect Impact (if it exist) based on the management zones solely, those by states within the management zone, PACs, and PH/GH. We can discuss these and I can alter tables or do GIS queries of these data to get values if not found in the tables.

Next I will work on some working draft threats maps ( coal included, others later today or next week ), and as/if we alter base-scale data and analysis product data, I will update and push these forward. I will over the next week, document what I did with all these data and will provide that to you.

Also you may wish to round numerical values to the nearest thousand, as that would eliminate many of the slivers in data efforts. This may be something that all writers and GIS staff needs direction on so we are all on the same page. This may be something the team leads need to decide on.

Also you can adjust the formatting on the acres values in the tables if needed for ease of use. Example, change decimal places so the acres values are easy to read, use, etc.

We can talk as your schedule settles and get you more or change things as needed.

I hope this helps and thanks to you and Ted for all the help and guidance on these efforts, Ed

--
