**Subject:** Fwd: Locatable minerals

Good Afternoon,

Pursuant to our discussions in Denver at the Task Force meeting, we have further reviewed the potential threat from development of locatable minerals in the "stronghold" areas of the Wyoming 9 Plan. This review included the parameters you requested, specifically those areas with geologic potential within the strongholds in Core Areas.

The attached maps delineate those potential threats, and while we do not believe they hold a high likelihood of development in the future, this recommendation should alleviate the concerns raised over locatable mineral development. The areas suggested for potential withdrawal are in radioactive sands, and mineral sands that may hold some limited potential for development. The other areas not included are almost exclusively sedimentary formations considered to have no mineral potential.

When you have had time to review these, please feel free to contact Jerimiah or myself for additional information or if you would like to discuss further. Thanks for your patience.

Have a great weekend!

Bob

Attached please find the latest set of maps we have compiled based upon a

review of the geologic data for potential locatable mineral development. The larger map is one which would be incorporated into the Wyoming 9-Plan amendment, the second is a zoomed in view of the area we have been reviewing. Brett's message below also includes the acreage calculations for each of the potential designations: existing withdrawals, recommended for withdrawal, consider for recommendation for withdrawal and open for locatable mineral development.

If you could please let me know if you have any questions with these areas tomorrow morning I would greatly appreciate it. Thanks.

Pam,

Attached are the maps for the new recommended for withdrawal areas. Also, here are the new acreage figures

Withdrawn in Core: 1,757,606 ac

Recommended for Withdrawal: 256,408 ac

Considered for Recommendation for Withdrawal: 894,304 ac

Open to Entry in Core: 3,766,892 ac

(Note: The Recommended for Withdrawal acreage does not account for lands recommended for withdrawal by other planning efforts, only those recommended for withdrawal by the Sage Grouse planning effort.)
