Susan,

I hope I filled out the information properly. I couldn't find definitions of the field. Feel free to modify if you feel appropriate.

Hi Boyd,

The following fields weren't answered (Column:Name) for your four projects:

BO:ANDE_Reduce_Threats
BP:ANDE_Incremental_Objectives
BQ: ANDE_Quantifiable_Performance
BR:ANDE_Adaptive_Management

If you want to just let me know the answers, I can complete them in the spreadsheet. Most commonly we have the following answers:

BO:ANDE_Reduce_Threats YES
BP:ANDE_Incremental_Objectives NO
BQ: ANDE_Quantifiable_Performance NO
BR:ANDE_Adaptive_Management YES

Although, some projects have Incremental Objectives. I've seen few with Quantifiable Performance measures. Anyway, let me know and I'll complete your entries.

cheers,
susan

Guys,

Just checking in with all of you on the CED Database assignment. I have received a few of these and Susan is working to pull all the information together for us into one master Region 6 spreadsheet. The deadline for her to complete the entire database is December 5. Therefore, Susan and I will need to receive your information soon, so that we can incorporate it. IF you have any questions, give us a ring! Susan is at Matt's old number.

Thanks guys! :)

Importance: High

Hey Guys,

I just got this document from Kathy Hollar! I guess it came out last week but for some reason it didn't come through. I mentioned that this was coming up, now here it is!!

They have a big Conservation Efforts Database (CED) for Greater Sage Grouse that all the programs working on-the-ground are populating. NRCS is populating this for SGI, the states are putting their information in as well as the NGOs. For the PFW program, they were able to do the bulk of the work through HQ and then use some software to ensure the projects don't show up as exact, in order to protect our landowner's privacy. Since they can't answer some of the questions for us, we have to go in and add information in an Excel spreadsheet, that will then be put into the CED database. The assignment sucks, no doubt!! However, for the first time that I can remember the PFW program has actually been asked to have our PLAs included in a listing decision. So, this is a positive, in my mind!!! Glad to be asked and hopefully the collective information going into the database can be enough to preclude a listing. There are a lot of great things happening out there on the landscape, and this is the best way to try to capture all of it.

Take a look at the memo, and then take a look at the spreadsheet. Let me know if you have questions or think we need to just have a conference call.

It looks like there are three colors. The light purple is stuff that is already taken care of for us. The light blue and pink are the fields they want us to populate. If anyone is struggling with the colors, let me know and I can do "gray scale"! Once you read through it, and get the hang of it, I think it will go pretty fast. The initial getting used to the table and the fields is kind of a pain in the butt though at first. They ask for the start date of these completed projects. If you don't remember, you can put in Jan 1, so no worries. Some of these are Yes or No, even though it might be a little bit of a maybe. If you click in the field itself, many of the fields have a pull down with choices. Easy enough!!

When it gets to the objectives of the project and narratives, go with "to the best of my knowledge or gut feeling". For how the project is benefitting GRSG, you may have to put too early to tell. However, there are a lot of things that you know from working in sage steppe for quite a while that you can say. 1) We followed the best standard practices 2) We followed up with spot spraying 3) Producers are following their grazing plan specifically and are great stewards of their land 4) we received excellent precipitation in the past two years and the veg is in excellent condition. Blah, blah

Some of these things may have some monitoring, so you can provide additional information, which is what the last data fields are for. If you don't have additional information, no worries. In the narrative fields about the benefits, go with what the intent of the project was and how you think the birds have responded. The information that is already populated for you can give you a better sense of the project / reminder of that particular project.

I know someone had asked about duplication with NRCS projects. I will ask Kathy about that, but for the sake of completing this exercise by December 5, don't worry about that. Just use the table as it was developed and that will be good enough.

I am sorry this is a short turn around on this one. Hopefully it won't be too bad. If you think there is a way that Katy or I can help with this effort, let me know. We are both available to assist. As you get your projects completed, please send them to me and Katy. I will compile the entire R6 response and send it in to Kathy Hollar. Katy can help me and then when Susan Abele gets here she

can complete it.

I included the major sage grouse field biologists as well, just so you were aware of this exercise.

Kathy Hollar has offered to do a teleconference or a Webinar for us if needed. Let me know!

Thank you so much everyone!!!

Heather

PFW Coordinators within GRSG range,

As you are aware, the development of the sage-grouse Conservation Effects Database (CED) is underway. Our program has been asked to help populate the database and complete any potential missing information so our efforts are considered as beneficial impacts during the status review. Attached is a detailed memo Kathy Hollar and colleagues produced to outline the request along with a spreadsheet of needed data. Detailed instructions are included within the attachments.

I am releasing this request from HQ in the hopes it gets disseminated out to the field quickly to meet the **December 5th deadline.**

Please direct any questions about this data call directly to **Kathy Hollar at 503-231-6156** or via email Kathy_Hollar@fws.gov.

As we know, sage-grouse are at the very front of the line in terms of Service priorities.

Thanks for all you do!

ry into the CED. This template assumes there is a spatial component already in existence that will be referenced by the value of the field within the CED. This allows for quicker uploads.

uploading process assess these layers and adds them automatically to the CED with no user input required provided the user has the necessary permissions. The user will need to simply copy and paste blank rows to add additional drop down values for the LabITS project ID #, Accomplishment ID #, and Project Name to form a unique ID for each record plus the Accomplishment Narrative.

Information was included because some CED attributes could be gathered from the Project level information for Greater Sage-Grouse. If a different species name was used and the project does benefit greater sage-grouse then the format 1/1/Start Year for the Start Date should be used.

Double counting. If State was a funding partner, they need to please check with them to help us avoid double counting. They contain landowner names/information.

Installation of livestock exclusion fencing and planting of native forbs to benefit nesting sage grouse.
The intent of the project is to restore a 560-acre portion of the property to quality waterfowl and wildlife habitat.

Edwards Creek is a closed basin originating in the Desatoya Mountains to the southeast, flowing roughly northward. Edwards Creek runs through a portion of the Smith Creek Ranch. The riparian area lies primarily on several parcels. Riparian restoration will mimic fire by removal of conifers that have invaded and altered the habitat. Upland restoration will mimic fire by removal of conifers that have invaded and altered the habitat. Upland restoration will mimic fire by removal of conifers that have invaded and altered the habitat.

The Eastern Nevada Landscape Coalition (ENLC) received funds to support restoration of Grecian Uhalde's property. The Gold Ranch property lies along the Henry's Fork River west of Rexburg, Idaho. The property abuts the 1,028-acre Gold Ranch property. Planned Work: Goldberg Creek is a tributary to the Pahsimeroi River approximately 30 miles north of Challis, Idaho. The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Creek Watershed. The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Creek Watershed.

Project location: T 15 SR 40 E 016, GPS Coordinates: -111.798020, 42.125660 (See attached agreement # 09-1F-5). This 909 acre project currently supports populations of elk, mule deer, moose, greater sage grouse, Columbian sharpshooter, and mountain quail. Project location: T 13 SR 34 E 003., GPS Coordinates : E 379304.82, N 4686882.37 (See attached agreement # 09-1F-5). The Service is providing funding and technical assistance to build nearly 5,000 feet of fence to exclude trespass cattle and horses. Construction of 1 mile of riparian fence along Hellroaring Creek, downstream of the previous project, on private lands.

PROJECT DESCRIPTION
Project Objectives/Biological Benefits The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Creek Watershed. The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Creek Watershed. The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Creek Watershed.

This project will install fence as part of a deferred rotation grazing system. This will involve 2 miles of new fence and 2 miles of existing fence. This is a joint grassland restoration project entered into between the landowner and U.S. Fish and Wildlife Service. This project will enhance upland acres and riparian habitat along Divide Creek and adjacent to a state wildlife management area. The objectives of this project include restoring and enhancing the sagebrush (*Artemisia* spp.)-grassland community on private lands. This amendment to the original cooperative agreement signed in FY2003 will provide on-the-ground dollars for sagebrush restoration. This is the second project being developed with the Lapham Ranch Company under their site-specific plan developed in 2003.

PROJECT DESCRIPTION
Project Objectives/Biological Benefits Create early successional wetland habitats within a commercial crop rotation that provides high quality habitat for trout and steelhead. Trout Unlimited (TU), U.S. Fish and Wildlife Service (FWS), Idaho Department of Fish and Game (IDFG), and a private landowner are working together to create early successional wetland habitats within a commercial crop rotation that provides high quality habitat for trout and steelhead. A 5.5 acre wetland establishment with a 35 acre livestock exclusion, off-site water constructed to manage surrounding wetlands. A cooperative agreement was developed between the USFWS and Little Snake River Conservation District to conduct riparian habitat restoration. The Bently Corporation owns property throughout the Carson and Walker River watersheds where they actively farm. The Bently Corporation owns property throughout the Carson and Walker River watersheds where they actively farm.

Long Creek Grazing System: Install 2 miles cross fence on the 987 acre Long Creek tract (see map). The grazing system was developed in 2003. Maggie Creek Ranch has been at the epicenter of many of Elko County, Nevada's fires during 2005 and 2006. Over 1,000 acres of riparian habitat have been lost. This project will benefit waterfowl both nesting and migrating. The project involves replacing an existing failing water control structure. The Rock Creek Coordinated Resource Management (RCWCRM) is in its second year and expanding its efforts to conduct riparian habitat restoration. This is a 2,500 acre native prairie enhancement project with the private landowner. A rest-rotational grazing system was developed in 2003. The project is located within the Drew's Creek Watershed Management Area in Lake County, Oregon. The WMA covers 1,000 acres. Site Information: Within the Milk River Focus Area of Montana, high priority species such as the northern pintail, least tern, and double-crested cormorant. Site Information: Within the Milk River Focus Area of Montana, high priority species such as the northern pintail, least tern, and double-crested cormorant.

Under last year's project (#691), the Eastern Nevada Landscape Coalition completed fencing the NE ¼ Section 12, Township 15N, Range 40E, Merger 1. This project is to improve riparian and stream habitats, fish passage and instream flows on the North Fork of the Big Lost River. The purpose of this project was to coordinate collaborative efforts between the U.S. Fish and Wildlife Service (Service) and the local landowners. Livestock will be excluded from riparian habitat through the construction of single-strand, high-tensile, electric fence. Livestock will be excluded from riparian habitat through the construction of single-strand, high-tensile, electric fence. This project will involve planting a forb seed mix comprised of; Bozoiisky Wildrye, Ladak Alfalfa, Delar Small Burnet, and Red Clover. Livestock exclusion fence will be installed around an impounded wetland in Petes Creek that was installed in a 2003 project. This is another of the upper Big Hole Candidate Conservation Agreement with Assurances (CCAA) projects in which the Service is working. Working with the local Popo Agie Conservation District, Wind River Reservation and private landowners resulted in the development of a riparian habitat restoration project. Working with the local Popo Agie Conservation District, Wind River Reservation and private landowners resulted in the development of a riparian habitat restoration project. Three wetland restoration projects and two river restoration/fish barrier removal projects are covered under this project.

Installation of livestock exclusion fencing and planting of native forbs to benefit nesting sage grouse.
The intent of the project is to restore a 560-acre portion of the property to quality waterfowl and wildlife habitat.

Edwards Creek is a closed basin originating in the Desatoya Mountains to the southeast, flowing roughly northward. Edwards Creek runs through a portion of the Smith Creek Ranch. The riparian area lies primarily on several parcels. Riparian restoration will mimic fire by removal of conifers that have invaded and altered the habitat. Upland restoration will mimic fire by removal of conifers that have invaded and altered the habitat. Upland restoration will mimic fire by removal of conifers that have invaded and altered the habitat.

The Eastern Nevada Landscape Coalition (ENLC) received funds to support restoration of Grecian Uhalde's property. The Gold Ranch property lies along the Henry's Fork River west of Rexburg, Idaho. The property abuts the 1,028-acre Gold Ranch property. Planned Work: Goldberg Creek is a tributary to the Pahsimeroi River approximately 30 miles north of Challis, Idaho. The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Creek Watershed. The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Creek Watershed.

Project location: T 15 SR 40 E 016, GPS Coordinates: -111.798020, 42.125660 (See attached agreement # 09-1F-5). This 909 acre project currently supports populations of elk, mule deer, moose, greater sage grouse, Columbian sharpshooter, and mountain quail. Project location: T 13 SR 34 E 003., GPS Coordinates : E 379304.82, N 4686882.37 (See attached agreement # 09-1F-5). The Service is providing funding and technical assistance to build nearly 5,000 feet of fence to exclude trespass cattle and horses. Construction of 1 mile of riparian fence along Hellroaring Creek, downstream of the previous project, on private lands.

PROJECT DESCRIPTION
Project Objectives/Biological Benefits
The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Creek Watershed. The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Creek Watershed. The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Creek Watershed.

This project will install fence as part of a deferred rotation grazing system. This will involve 2 miles of new fence and 2 miles of existing fence. This is a joint grassland restoration project entered into between the landowner and U.S. Fish and Wildlife Service. This project will enhance upland acres and riparian habitat along Divide Creek and adjacent to a state wildlife management area. The objectives of this project include restoring and enhancing the sagebrush (*Artemisia* spp.)-grassland community on private lands. This amendment to the original cooperative agreement signed in FY2003 will provide on-the-ground dollars for sagebrush restoration. This is the second project being developed with the Lapham Ranch Company under their site-specific plan developed in 2003.

PROJECT DESCRIPTION
Project Objectives/Biological Benefits
Create early successional wetland habitats within a commercial crop rotation that provides high quality habitat for trout and steelhead. Trout Unlimited (TU), U.S. Fish and Wildlife Service (FWS), Idaho Department of Fish and Game (IDFG), and a private landowner are working together to create early successional wetland habitats within a commercial crop rotation that provides high quality habitat for trout and steelhead. A 5.5 acre wetland establishment with a 35 acre livestock exclusion, off-site water constructed to manage surrounding wetlands. A cooperative agreement was developed between the USFWS and Little Snake River Conservation District to conduct riparian habitat restoration. The Bently Corporation owns property throughout the Carson and Walker River watersheds where they actively farm. The Bently Corporation owns property throughout the Carson and Walker River watersheds where they actively farm.

Long Creek Grazing System: Install 2 miles cross fence on the 987 acre Long Creek tract (see map). The grazing system was developed in 2003. Maggie Creek Ranch has been at the epicenter of many of Elko County, Nevada's fires during 2005 and 2006. Over 1,000 acres of riparian habitat have been lost. This project will benefit waterfowl both nesting and migrating. The project involves replacing an existing failing water control structure. The Rock Creek Coordinated Resource Management (RCWCRM) is in its second year and expanding its efforts to conduct riparian habitat restoration. This is a 2,500 acre native prairie enhancement project with the private landowner. A rest-rotational grazing system was developed in 2003. The project is located within the Drew's Creek Watershed Management Area in Lake County, Oregon. The WMA covers 1,000 acres. Site Information: Within the Milk River Focus Area of Montana, high priority species such as the northern pintail, least tern, and western pond turtle. Site Information: Within the Milk River Focus Area of Montana, high priority species such as the northern pintail, least tern, and western pond turtle.

Under last year's project (#691), the Eastern Nevada Landscape Coalition completed fencing the NE 1/4 Section 12, T15N, R10E, S10. This project is to improve riparian and stream habitats, fish passage and instream flows on the North Fork of the Big Lost River. The purpose of this project was to coordinate collaborative efforts between the U.S. Fish and Wildlife Service (Sereno) and the local Popo Agie Conservation District, Wind River Reservation and private landowners resulted in the installation of a livestock exclusion fence. Livestock will be excluded from riparian habitat through the construction of single-strand, high-tensile, electric fence. Livestock will be excluded from riparian habitat through the construction of single-strand, high-tensile, electric fence.

This project will involve planting a forb seed mix comprised of; Bozoiisky Wildrye, Ladak Alfalfa, Delar Small Burnet, and other native species. Livestock exclusion fence will be installed around an impounded wetland in Petes Creek that was installed in a 2003 project. This is another of the upper Big Hole Candidate Conservation Agreement with Assurances (CCAA) projects in which the local Popo Agie Conservation District, Wind River Reservation and private landowners resulted in the installation of a livestock exclusion fence. Working with the local Popo Agie Conservation District, Wind River Reservation and private landowners resulted in the installation of a livestock exclusion fence. Three wetland restoration projects and two river restoration/fish barrier removal projects are covered under this project.

object is to restore a 560-acre portion of the property to quality waterfowl and wildlife habitat. This

a closed basin originating in the Desatoya Mountains to the southeast, flowing roughly northward through a portion of the Smith Creek Ranch. The riparian area lies primarily on several parcels which will mimic fire by removal of conifers that have invaded and altered the habitat. Upland restoration was completed under funding received from the Idaho National Landscape Coalition (ENLC) received funds to support restoration of Grecian Uhalde's property. This property lies along the Henry's Fork River west of Rexburg, Idaho. The property abuts the 1,028-acre Hellroaring Creek is a tributary to the Pahsimeroi River approximately 30 miles north of Challis, Idaho.

This project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Valley. This project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Valley. GPS Coordinates: -111.79802o, 42.12566o (See attached agreement # 09-1F). This project currently supports populations of elk, mule deer, moose, greater sage grouse, Columbian sharpshin, etc. GPS Coordinates : E 379304.82, N 4686882.37 (See attached agreement).

Funding assistance and technical assistance to build nearly 5,000 feet of fence to exclude trespass cattle from riparian habitat along Hellroaring Creek, downstream of the previous project, on private land owned by the Lapham Ranch Company.

The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Valley. The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Valley. The overall goal of this project is to enhance the sagebrush-grassland community on private lands in the Grasshopper Valley.

This project involves construction of a tall fence as part of a deferred rotation grazing system. This will involve 2 miles of new fence and installation of water control structures. A cooperative agreement entered into between the landowner and U.S. Fish and Wildlife Service (USFWS) provides upland acres and riparian habitat along Divide Creek and adjacent to a state wildlife management area. This project includes restoring and enhancing the sagebrush (*Artemisia* spp.)-grassland community on private lands. Funding provided under the original cooperative agreement signed in FY2003 will provide on-the-ground dollars for implementation of this project being developed with the Lapham Ranch Company under their site-specific plan development.

A wetland enhancement project established within a commercial crop rotation that provides high quality habitat for agricultural production. USFWS, U.S. Fish and Wildlife Service (FWS), Idaho Department of Fish and Game (IDFG), and a private landowner are working jointly to establish a 35 acre livestock exclusion, off-site water constructed to manage surrounding areas. An agreement was developed between the USFWS and Little Snake River Conservation District to conduct a study of riparian habitat throughout the Carson and Walker River watersheds where they actively farm and ranch. The Carson and Walker River watersheds are located within the Long Creek tract (see map). The grazing system has been at the epicenter of many of Elko County, Nevada's fires during 2005 and 2006. Over time, the project benefits waterfowl both nesting and migrating. The project involves replacing an existing failing water control structure with a more durable one.

Riparian Resource Management (RCWCRM) is in its second year and expanding its efforts to include native prairie enhancement projects with the private landowner. A rest-rotational grazing system implemented within the Drew's Creek Watershed Management Area in Lake County, Oregon. The WMA covers about 1,000 acres within the Milk River Focus Area of Montana, high priority species such as the northern pintail, less than 10% of the focus area. Within the Milk River Focus Area of Montana, high priority species such as the northern pintail, less than 10% of the focus area.

In cooperation with the Eastern Nevada Landscape Coalition completed fencing the NE Section 12, Twp. 1N, R. 1E, S. 12S. To improve riparian and stream habitats, fish passage and instream flows on the North Fork of the Big Lost River, the project was to coordinate collaborative efforts between the U.S. Fish and Wildlife Service (Service) and the landowners. Excluded from riparian habitat through the construction of single-strand, high-tensile, electric fence. Excluded from riparian habitat through the construction of single-strand, high-tensile, electric fence. Involved planting a forb seed mix comprised of; Bozinsky Wildrye, Ladak Alfalfa, Delar Small Burnett, etc. A fence will be installed around an impounded wetland in Petes Creek that was installed in a 2001 cooperative agreement. One upper Big Hole Candidate Conservation Agreement with Assurances (CCAA) projects in which the BLM Popo Agie Conservation District, Wind River Reservation and private landowners resulted in improved riparian habitat. In the BLM Popo Agie Conservation District, Wind River Reservation and private landowners resulted in improved riparian habitat. Two river restoration/fish barrier removal projects are covered under this cooperative agreement.

In_Perpetuity	No Finish Date, In Perpetuity
Effective_Determined	3) Has the activity been deemed effective?
Effective_Explained	3a. Explain why the activity was deemed effective
Part 2: For actions not yet implemented, is there a high level of certainty that:	
Reas_Certain	a. The activity will be implemented.
Legal_Authority	b. The implementing party has the legal authority to conduct the activity.
Staff_Available	c. Financial, staffing, and administrative resources necessary to carry out the conservation effort are available.
Regulatory_Mech	d. Regulatory and/or procedural mechanisms are in place to carry out the efforts.
Compliance	e. All Federal/State/Local legal project compliance requirements have been met or are reasonably certain to be met.
Vol_Incentives	f. If voluntary participation is needed, are incentives adequate to ensure the level of participation necessary to carry out the conservation effort.
Part 3: For actions that have not been deemed effective (e.g. programs/actions only recently implemented), does the action:	
Reduce_Threats	a. Describe how the conservation effort reduces the threats.
Incremental_Objective	b. Provide incremental objectives and dates for achieving them.
Quantifiable_Measures	c. Provide quantifiable performance measures to monitor both implementation and effectiveness.
AD_Strategy	d. Incorporate principles of adaptive management (e.g. a corrective management strategy)

s may encompass these areas, however we are focused on efforts within core habitat and current sag

e-grouse range.

Table Name: Document Values

Table Type: Lookup table

Purpose: A lookup table listing the categories of documents that a particular document could fall under

[Back to Navigation](#)

Field Value	Field Text	Definition
1	Project Proposal	
2	Habitat Assessment	
3	Management Plan	
4	Data	
5	Map(s)	
6	Photo(s)	
7	Seed Information	
8	Monitoring Report	
9	Other	

Table Name: Effort Status

Table Type: Lookup table

Purpose: Indicates whether the effort is currently being planned, is in progress, or has been completed.

[Back to Navigation](#)

Field Value	Field Text	Definition
1	Planned	The effort is still in the planning stages and no actions have yet been taken to im
2	In Progress	The effort has begun but has not yet reached completion
3	Completed	The effort is complete, no actions remain to be taken with the exception of post

plement it

-effort monitoring

Table Name: Entry Type

Table Type: Lookup table

Purpose: Define the progress of the conservation effort from a draft to an approved record

[Back to Navigation](#)

Field Value	Field Text	Definition
1	Draft Record	The record has not been submitted to the approving official and is still be used in any listing decision determination.
2	Awaiting Approval	The record has been submitted to the approving official and is considered available and will not be used in any listing decision determination.
3	Approved	The record has been approved by the approving official, they are considered
4	Marked for Deletion	These efforts do not belong in the CED and should be removed from be used in any listing decision determination.

ill being entered. These efforts will not be made publically available and will not

lered complete by the data entry user. These efforts will not be made publically

sidered correct and final, they will be displayed and used in the listing decision.

the database. These efforts will not be made publically available and will not

Table Name: HUC 12 Values

Table Type: Lookup table

Purpose: List of all the HUC 12 watershed values possible to select.

Note: Parts of Arizona and Nebraska are included as they were part of the historic range and edge efforts
