Importance: High

Hi all

I will dive into this see what I can find. Jaime would like us to find a way (which we can likely cover) to keep these moisture measurement going for this season – hopefully with a more reliable instrument.

Howdy,

I think we should consult with someone that has more experience with using soil moisture probes, especially in rocky habitat. Perhaps Barbara Holzman may know or may know someone.

Russ, would you or Jaime know anyone like this? The only person I can think of is Barbara Holzman.

Hi there,

This is a blast from the past email, but sally surveys will be starting up again in October and I never got a response on this moisture probe issue back in March. You guys purchased the probe and I'm wondering if you think we need to get another one – or some other option for this season, or whether that is even necessary. The moisture measures have been particularly problematic. Ryan will be summarizing this more when he puts together our salamander report in October.

Subject: Moisture probe

Hi Jonathan

I know you have been away but I'm sure Brian let you know that the moisture probe is now caput. These sally surveys this month will have no moisture measures and maybe we can discuss future plans either this week or when you guys are out. We have definitely have had some issues with the probe we were using.

Thanks

Russ
