Comm Team:

FYI - It might best to send a project representative (Gerry, Russ, Melisa or I) to answer questions from this Bay area owl group, if possible, rather than try to equip a grad student (Sara) with pages of FAQs about the project and its potential for rodenticide effects. Your thoughts?

Dan

**Subject:** RE: chart of mouse-trapping numbers for SEFI

Hi Sara:

Thanks for getting back in touch. I will be working on analyzing those mouse numbers this month. When do you need them by?

I heard from Pete that you might be presenting some of your owl data to an owl group. What is the occasion and when? I will be working to help get you some answers to common questions, but it might be best if someone that represents the mouse project were there to answer questions from the public about the proposed project, and its possible affects on owls and other species. Not really fair to have you taking on those types of hard questions when you don't have much of the background on the alternatives that might be proposed.

We are working on the EIS with the FWS and PRBO right now, and will likely have a document ready for public review by spring.

If you could send Pete or I the information about your meeting and audience, we can possibly help you out.

Talk to you soon – feel free to call.

**Subject:** chart of mouse-trapping numbers for SEFI

Hi Dan!

Hope things are coming along with SEFI's mouse eradication project. I haven't seen the EIS release yet - is that imminent?

I was wondering if you can share the mouse trapping numbers from 2010-2011, maybe in tabular or graphic form? I'm trying to show a correlation with number of mice in the owl's diet.

Thanks in advance,

Sara
