Project

Welcome to River Restoration Analysis Tool, or RiverRAT. River RAT is a river project development and evaluation tool. It was developed to facilitate consistent and thorough evaluation of the potential impacts of proposed projects on river habitat. The tool is supported by a source document that provides a comprehensive synthesis of the watershed and river sciences relevant to restoration planning and design, a project risk evaluation matrix, and a separate comprehensive checklist of information necessary to review project proposals.

The RiverRAT tool will walk you through a series of 16 questions that parallel the phases of restoration project development. Each question is designed to help you evaluate whether a project has addressed fundamental considerations at each step of the project development process. You will be able to record your responses and thoughts for each question, and print a final report to document your review.

If you would like to explore RiverRAT click [here](#).
If the tool suits your needs, request your own username and password by contacting us [here](#).

^e *US Fish and Wildlife Service, Arcata, CA 95521, USA*

Risk = Probability x Consequence

risk to species

risk to owners

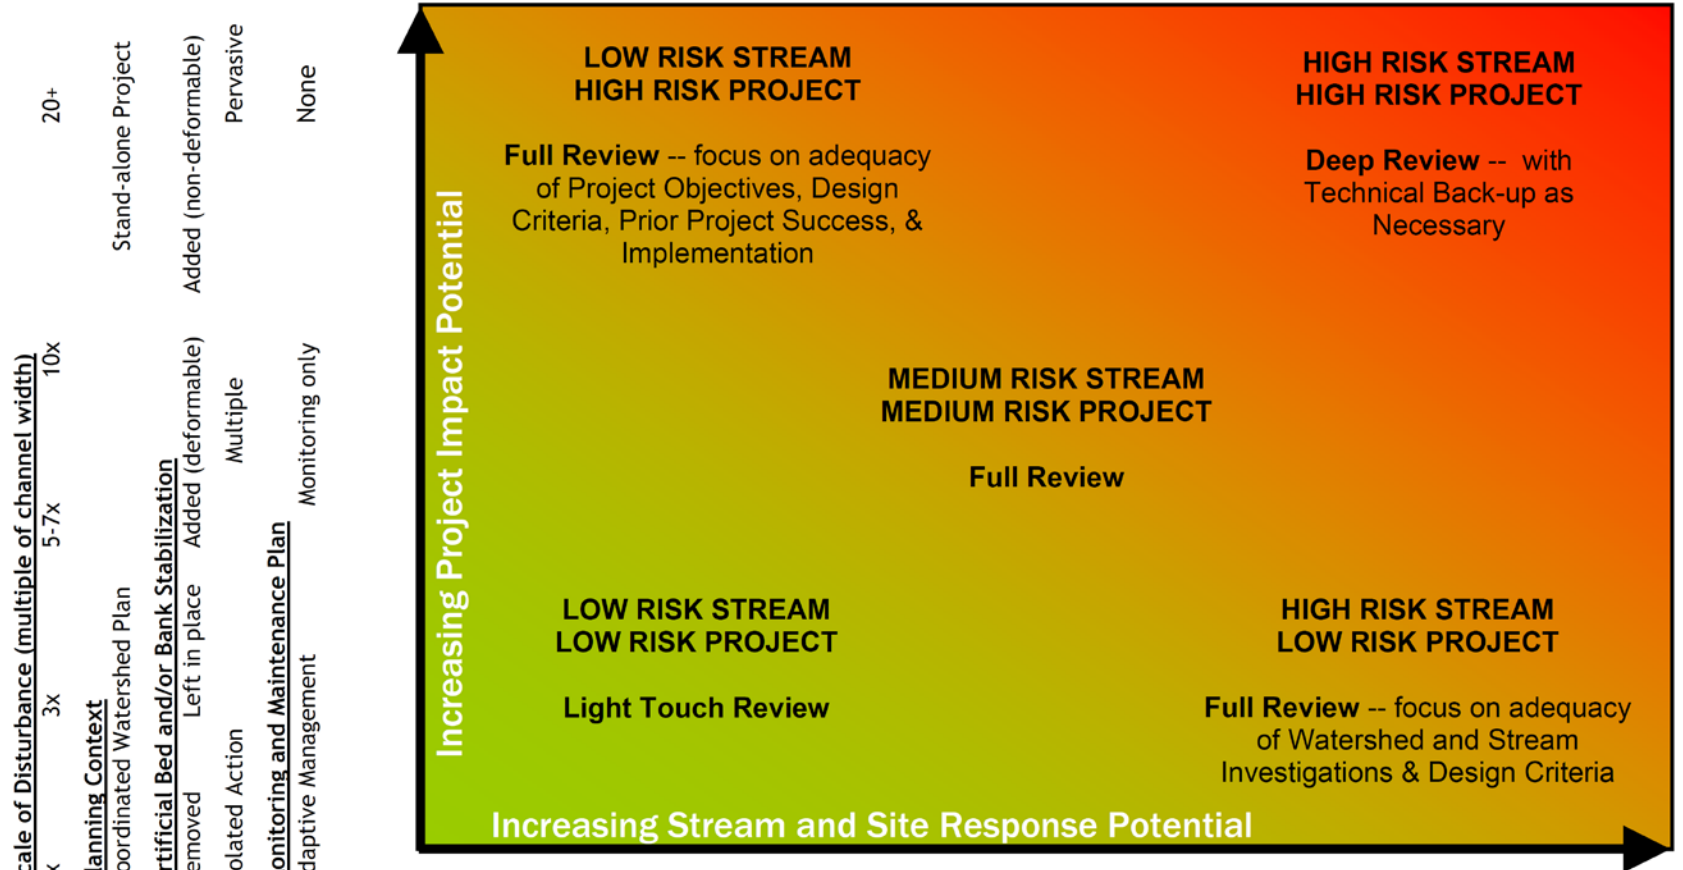

risk to ecosystem

social risk and

institutional risk

Project Risk Screening Matrix 2011

Stream Sensitivity / Stream Type

Source (>10%) Bedrock	Colluvial	Transport (3-10%) Alluvial	Response (<3%) Incised Channel / Alluvial Fan
--------------------------	-----------	-------------------------------	--

Riparian Corridor

Continuous/Wide	Semi-continuous/Wide	Discontinuous/Narrow	Urbanized or Levee Confined
-----------------	----------------------	----------------------	-----------------------------

Bank Erosion Potential

Naturally Non-erodible	Erosion Resistant	Highly Erodible or Revetted
------------------------	-------------------	-----------------------------

Bed Scour Potential

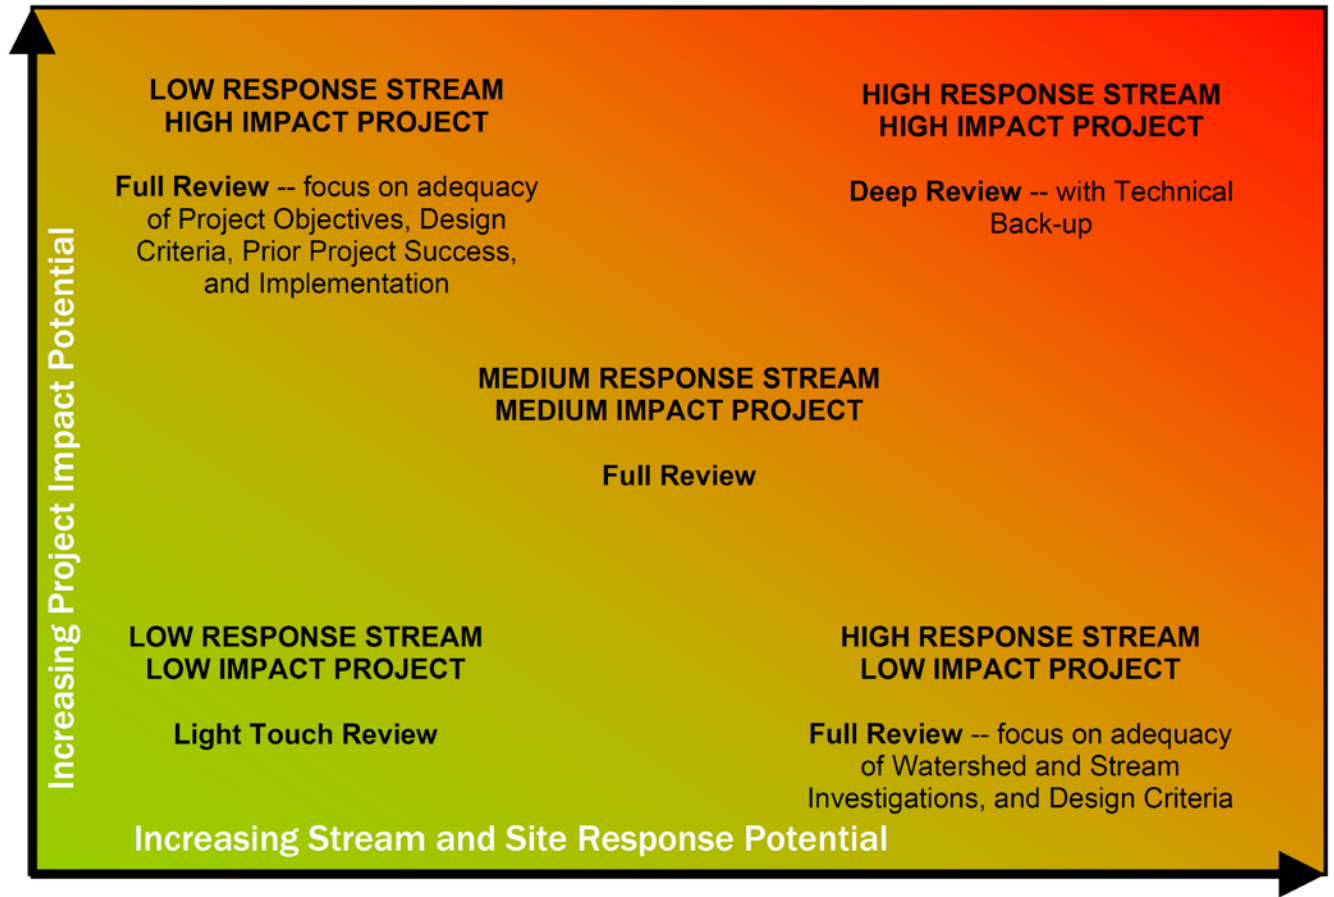

Boulder/Clay Bed (low)	Gravel/Cobble Bed (moderate)	Sand/Silt Bed (high)
------------------------	------------------------------	----------------------

Dominant Hydrologic Regime

Spring-fed	Snowmelt	Rain	Rain-on-Snow	Thunderstorm/Monsoon
------------	----------	------	--------------	----------------------

Large Wood Risk Screening Matrix

<u>Planning Context & Scale</u>	Stand-alone Project
Coordinated Watershed Plan	Multi-Reach Scale
Site Scale	Reach Scale
<u>Wood Length (multiple of channel width) & Wood Properties</u>	<1.0x no rootwad
>2.5x with rootwad	1.5x
High Density, Slow Decay	Low Density, Fast Decay
<u>Anchoring</u>	
None	Entire Structure
Anchor Points	Vertical Posts
	Individual pieces
	Ballast
<u>Infrastructure</u>	Pinning
None	Road Crossings
	Parallel Roadways
	Road Crossings
	Structures
	Piers
<u>Monitoring & Maintenance Plan</u>	None
Adaptive Management	Monitoring only

<u>Scale of Problem to be addressed</u>			
Site	Reach	Multiple reaches	Watershed
<u>Landscape Sensitivity / Stream Type</u>			
Source (>10%)		Transport (3–10%)	Response (<3%)
Bedrock	Colluvial	Alluvial	Incised Channel
			Alluvial Fan
<u>Riparian Corridor</u>			
Continuous/Wide	Semi-continuous/Wide	Discontinuous/Narrow	Urbanized or Levee Confined
<u>Bank Characteristics</u>			
Naturally Non-erodible		Erosion Resistant	Highly Erodible or Revetted
<u>Bed Characteristics</u>			
Low (boulder/cobble/clay bed)		Moderate (gravel/silt bed)	High (sand bed)
<u>Dominant Hydrologic Regime</u>			
Spring-fed	Snowmelt	Rain	Rain-on-snow
			Convective Thunderstorm

Pre-App Meeting Screening Matrix

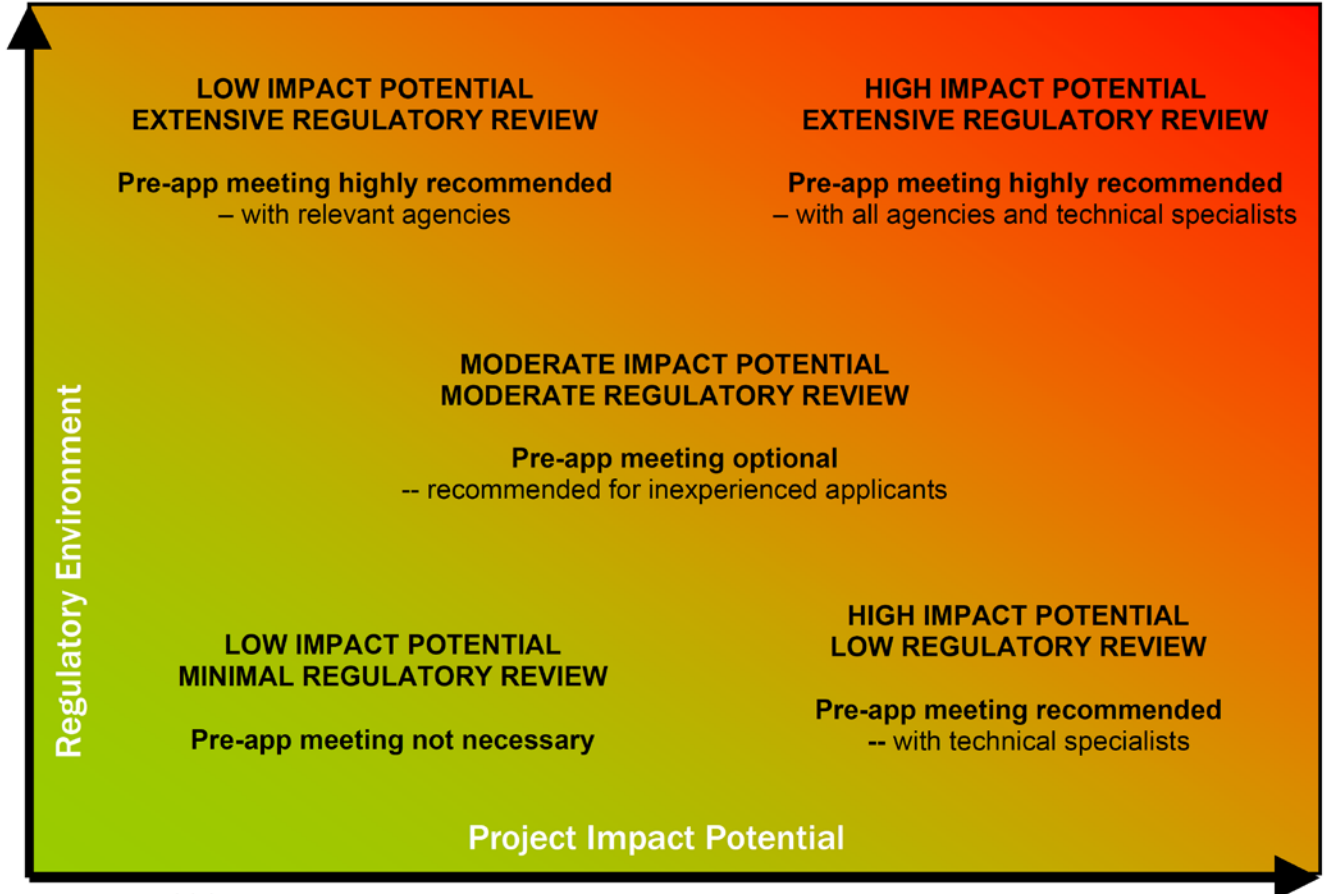

Endangered Species Act
 Programmatic NLAA
 No Effect
 Individual Consultation
 Potential Jeopardy

Corps/DSL: acres of impact
 Nationwide/General Authorization
 <0.1 acres
 LAA
 RGP/GP
 Individual permit
 >0.5 acres

Public Interest
 Low
 Moderate
 Significant/Potential Litigation

Project Complexity and Constraints
 Common Action
 No jump
 no in-water work
 Site Specific Design
 6" jump
 >1' jump, channel spanning
 outside window
 Experimental

Cultural or Historic
 Not present
 Unknown
 Present (known)

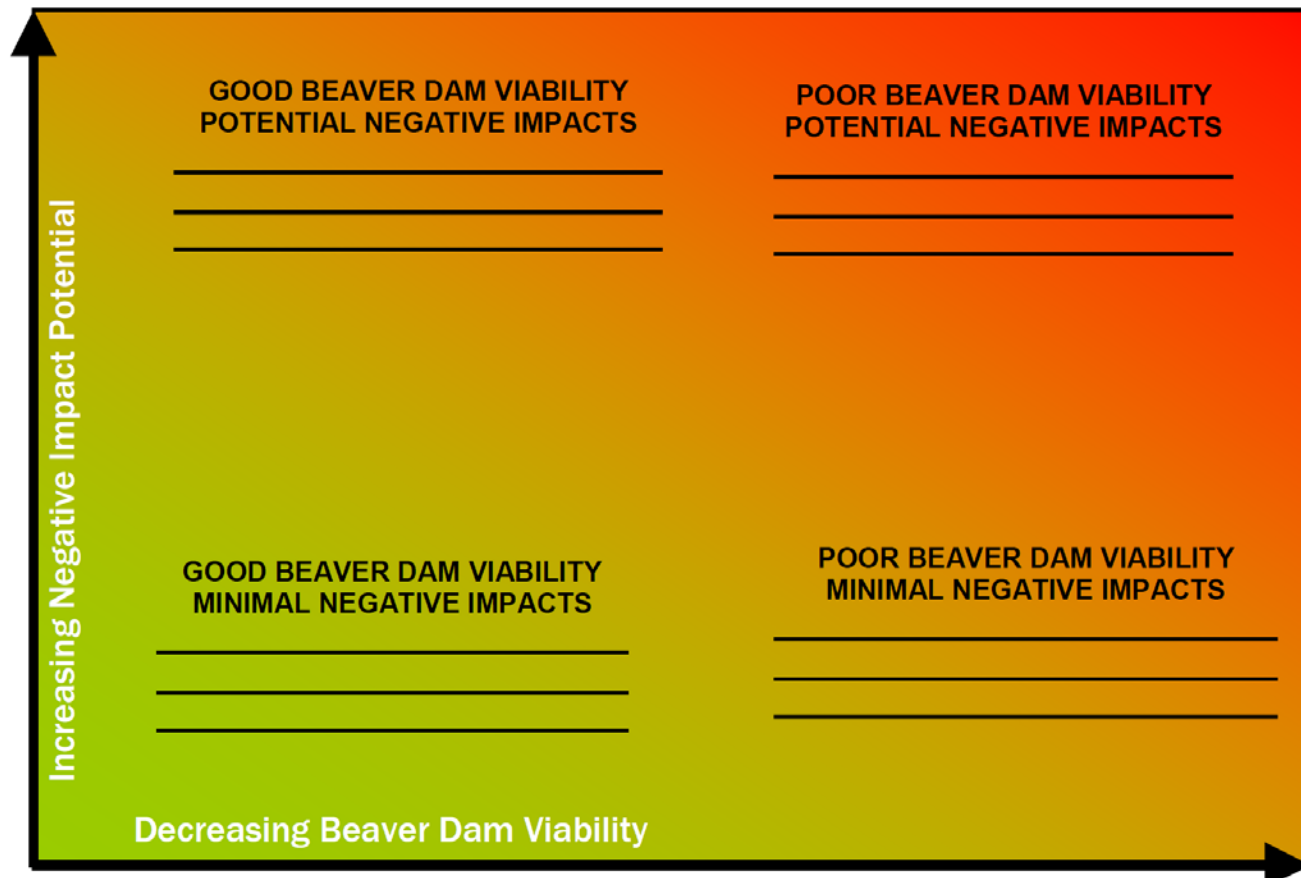

Stream sensitivity / Stream type			
Source (>10% slope)		Transport (3–10%)	Response (<3%)
Bedrock	Colluvial	Alluvial	Incised Channel / Alluvial Fan
Wetland quality			
Prior Converted		Degraded	Pristine/Unique
Aquatic species			
Common or tolerant		Connected	Sensitive or isolated
Water quality and quantity			
Unimpaired	Impaired	TMDL	Contaminants
No use of water/no need for water right			Point of diversion/change in water right
Scale of Disturbance (stream or mining)			
1x	3x	5 - 7x	10x 20+
<5000 cubic yards removed			>5000 cubic yards removed
