

Threat	Priority Landscapes	Priority	Reason for Prioritization	SubActivity (Conservation Action)	Barriers to implementation and/or Level of Scientific Uncertainty	Is expert elicitation needed? (Y/N)
				Minimize removal for native ungulate production Urbanization and recreational demands	restoration • Uncertainty on the effects of climate change on restoration.	
Mining	States include North Dakota, South Dakota, Colorado, Nevada , Wyoming, and Utah. Sage-grouse management zones I, II, III, VI	Tier 2	High severity, low acreage	Mine reclamation with goal of sagebrush restoration	<ul style="list-style-type: none"> • provisions in SMCRA regarding restoration • Addressing toxic leachates and impacts on habitat (and potentially birds) • Lack of sufficient resources for reclamation 	
Recreation	Range-wide but localized	Tier 2	Low severity, dispersed	Road and Trail Closure Reroute Trail	• Inability to resolve dispersed recreation	
Urbanization	Range-wide but localized	Tier 2	Urbanization continues to cause permanent habitat loss, habitat degradation, and fragmentation. Urbanization also results in impacts from associated features (e.g.,		<ul style="list-style-type: none"> • Insufficient political and financial support at the county and/or municipal level • Inconsistent implementation and enforcement of existing measures • Lack of zoning and land use planning regulations 	

Comment [DP4]: We may want to break this into two columns – barriers and level of uncertainty – for clarity. While we are focusing on scientific uncertainty the addition of barrier information is very useful. But I think putting both into the same column is confusing.
