

I am seeking records explicitly pertaining to information the Mexican Wolf Recovery Program has regarding Mexican wolf depredation events since July 1, 2020 until the date of search (exclusive of records I already received responsive to FOIA FWS-2020-00832).

I am seeking all records pertaining to livestock conflict in Mexican wolf habitat anywhere within the recovery area within Arizona or New Mexico. By records, I mean, any document, correspondence, attachment, report, recording, phone log, field observations, emails, meeting notes, photographs, or any other information that would provide me with insight into what information is available to FWS regarding Mexican wolf depredations on livestock (or investigations related thereto) in the past approximately 2 months. I am interested in inter- and intra-agency communications on this issue in order to better understand the context in which management decisions are being made. I want to know what FWS is being told about wolf depredation events in New Mexico and Arizona by cooperating agencies and how the FWS is interpreting and reacting to this information.

I would like all records from July 1, 2020 through the date of the search, as this is an ongoing issue. I have tried to tailor this request narrowly so as to limit the information we seek to what should be currently available as it pertains to recent events.
