Subject: Fw: Dust control update
Date: Monday, June 8, 2020 9:01:35 AM

Good morning Shelly,

I will be sending our list of requested dust abatement chemicals shortly.

I know you were looking into confirming what chemical was already used at San Bernardino NWR. I wanted to share with you an email I got from the refuge where it appears it may have been a mag product. Were you able to find anything out on this?

Thank you,

Juliette Fernandez
Refuge Supervisor AZ/NM

Subject: Dust control update

Attached is the most updated folder with the product list, associated excel document, and product information documents.

2 things to highlight:

- I know we already said the BIS Ligno 10 appears ok, but I went ahead and put both lignin sulfonate products under the "not within a mile" category given what I've been able to gather on the LC50 rates for minnows (which had to be converted).
- The guy from Brazos that I talked to today mentioned that he has been supplying "thousands of tons" of mag one product to the border wall contractor in the Douglas area, he said they asked him about switching to his lignin product (BIS Ligno 10) but that he has not shipped any of that down to them... He stated he has recently provided tons of mag one to our area. So I'm concluding that what was recently applied from the pavement all the way out to mm18 was mag one.

Any further questions just ask!
