Tasha,

Here is information about the dust suppression. Call me if you have thoughts I need to share.

Steve

Subject: [EXTERNAL] Dust suppression alternative usage

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Good morning all,

Due to ongoing safety and water usage concerns, USACE would like to increase dust suppression alternative usage. The dust suppression alternatives that have the least environmental impacts are Soiltac CB and Landlock (OPSDIRT). We are advising the contractors to use one of these two items across the project sites. The contractors are going to use one of these two products on all construction access roads and along the border with the exception of within designated critical habitat or within 100-feet of open surface water.

Links are provided below for your ease to read up on each product. Are there any areas that absolutely must be excluded from use within your managed lands? Please provide information of areas where you request that the product be pulverized and/or removed from roadways at the end of construction (excluding temporary access roads that are already slated to be remediated).

Please provide any feedback or comments that your agency has for USACE to me by 11/18/2020.

Soiltac CB [Blockedhttps://www.soilworks.com/products-and-services/soiltac](https://www.soilworks.com/products-and-services/soiltac)

LandLock (OPSDirt) [Blockedhttps://www.landlocknaturalpaving.com/dust-control](https://www.landlocknaturalpaving.com/dust-control)

Thank you,
Kate
