Might just be my groggy mind after returning from a trip, but having trouble plotting that GPS coordinate that you sent. Possibly just in Canada?? I can find the same map location in ArcGIS where the dot was shown in the file you sent, but entering that lat/long coordinate in to different "To UTM converters" is giving me weird results. If I assume the dot is correct (Jamie Sovde property, very close to border), I am going to use a UTM coordinate of 253571, 5432932 for my files.

John

Hi Megan,

The GPS Location is attached and they did not get any genetic samples.

Hi Dan,

Thank you for sending us the recent Incident Report for the lynx caught in a coyote trap! Do you happen to have the coordinates for this location? I tried to find 440th St and 120th Ave location listed on the IR in Google Earth and Maps but I couldn't find the location. My apologies for the additional information request.

Also, do you know if any genetics were collected (e.g. scat or hair) from the site? That may not be a standard practice, I am only asking because I am entering the information into our database and there is a column for genetics. Thanks for your help!

Best regards,

Megan Kosterman

Thanks, Dan. Please include Megan Kosterman (USFWS - MN WI Field Office, cc'd here) on future incidents. I'm helping Megan transition into the role of lynx lead for our office, so copy us both for now.

Thank you!
Tam

--

Report of lynx caught in coyote trap and released unharmed. I'm forwarding this message because John Erb is out of the office. I've included people listed in the reporting protocol dated 11/19.

Dan
