TABLE OF CONTENTS

SPECIES: *Hexastylis naniflora* (Dwarf-Flowered Heartleaf) 1
SITE: Former U-2528AA (Catawba County) 1
REFERENCES 5

APPENDICES

APPENDIX A. MONITORING DATA AND DISCUSSION
APPENDIX B. FIGURES
APPENDIX C. NORTH CAROLINA NATURAL HERITAGE PROGRAM – ENDANGERED AND RARE PLANT SURVEY FORM

Species: *Hexastylis naniflora* (Dwarf-flowered heartleaf)

Site: [Former U-2528AA] (Catawba County)

NC NHP EO number(s): 32, EO ID 14983

NCDOT Point of Contact (POC): Tim Bassette

Signed ROW occurrence? No **Site management plan**: N/A

Site protections: The northern subpopulation of this occurrence (76 plants, June 18, 2013 survey) is situated within the existing North Carolina Department of Transportation (NCDOT) right-of-way of I-40. This portion of the occurrence, however, is a roadside population that is not under formal protection from a binding agreement. The remainder of the occurrence, which sits outside of the existing NCDOT right-of-way, is also not under any formal protection from a binding agreement.

Origin of species at this site: Native

Status of species at this site: Extant

Species short-term trend at this site (relative to last count): Declining

Species long-term trend at this site (averaged over multiple counts): Declining

---

Status of NCDOT commitments pledged during ESA Section 7 consultations:

A. **NCDOT project ID:** R-9999L, Murrays Mill Conservation Area (formerly U-2119)
USFWS log number: 4-2-95-102

On August 3, 1995 the U.S. Fish and Wildlife Service (Service) issued a Biological Opinion (BO) pertaining to projects B-2119, U-2307, and U-2528AA. The BO was issued in response to a request to initiate formal consultation for the referenced projects on July 20, 1995. Per the BO, NCDOT made the following environmental commitments (pgs. 5-6):

- The NCDOT will pursue purchasing land in fee title (or conservation easement) from willing sellers to establish a preserve of approximately 11.9 ha (29.4 acres) in the Murray's Mill area.

Status: On May 1, 1996, the NCDOT purchased 25.07 acres (Tract 1) and an additional 8.61 acres on the adjacent Bowman Tract (Tract 2) on March 13, 2006.

- The preserve will be conveyed to another responsible entity (such as the Catawba County Historical Association of Catawba County) with an accompanying agreement or deed restriction that the existing plant population be protected in perpetuity.

Status: Currently NCDOT still holds the title to the site but is working toward the transfer of ownership and stewardship responsibilities to the Catawba County Historical Association. The NCDOT has developed a draft conservation plan which outlines the management of the Murray's Mill Conservation Area for the perpetual conservation of the *H. naniflora*.

- The NCDOT and Federal Highway Administration have also agreed that if establishing a preserve in the Murray's Mill area is not feasible, they will pursue establishing a preserve of similar size and quality (with regards to plant population density and size) at another location in North Carolina, as agreed upon by the Service.

Status: As of March 13, 2006 the NCDOT completed the purchase of the Murray's Mill tracts which met and exceeded the necessary 11.9 hectare (29.4 acres) commitment.

- If the entire 11.9 hectare area, as committed in the Assessment, is not protected through fee title or conservation easement, then Project U-2528AA will be dropped from the Programmatic Section 7 Consultation and will need to be addressed at a separate consultation at a future date.

Status: As mentioned in the status of the commitment above, the NCDOT purchased more than the requisite 11.9 hectares.

- Some transplanting of *H. naniflora* individuals to protected sites, or possibly even the collecting of individuals for Center for Plant Conservation-approved of botanical gardens, may be carried out, but will be the sole responsibility of the Service. Any transplanting efforts will be conducted with prior coordination with NCDOT.

Status: To-date, no transplanting or collecting of individual plants has been coordinated.

- The Service has agreed that if the above mentioned preserve is established, and Project U- 2528AA is dropped (not constructed), the NCDOT may substitute another project involving *H. naniflora* contingent upon Service approval. The Service will evaluate such criteria as plant population size, habitat quality, landscape context (e.g. rural. urban), proposed impacts to the plant population, etc. in making a decision on substituting another NCDOT project.

Status: The option for NCDOT to substitute another project is no longer viable because U- 2528AA has been constructed.

- Assisting the Service in answering questions that arose during the recent 5-year status review for the species.

Status: Every two years for no more than a six year period, the NCDOT will monitor all occurrences associated with 14 NCDOT projects where *H. naniflora* was found in the right-of-way, of which Murray's Mill is one. Environmental baseline data will be obtained and will include both quantitative and qualitative analyses. Specifics of the five year review assistance are detailed in the Service's R-2824 (Proposed Upgrade of Lovelady Road) BO letter to NCDOT dated November 13, 2009.

B. NCDOT project ID: TIP No. R-2824 (Upgrade of Existing Lovelady Road (SR 1546) from Laurel Street (SR 1545) in Valdese to Malcolm Boulevard (SR 1001) in Rutherford College, Burke County, North Carolina.
USFWS log number: 4-2-09-367

From pages 31-34 of the Biological Assessment for TIP R-2824 (May 8, 2009), and Appendix B of the BO for the same project (November 13, 2009), NCDOT committed to assist the Service with the five-year review process by providing information about several populations of *H. naniflora* that are either held in conservation easements or occur within NCDOT right-of-way. (This assistance serves as a conservation measure for R-2824.) The population of *H. naniflora* associated with U-2528AA is included in this group.

Because *H. naniflora* is partially located within the right-of-way of U-2528AA, NCDOT will monitor Element Occurrence (EO) No. 32 that is associated with U-2528AA, the results of which will be incorporated into the data spreadsheet, submitted to the Service annually on January 1. Information generated by the following activities will be included in the spreadsheet.

Every two years for no more than six years, NCDOT will:

- Enumerate plants via direct count and/or sample plot estimates.
- Delineate changes to the population boundary using Global Positioning System/Geographic Information System, computing changes to acreages of occurrence areas, computing *H. naniflora* plant densities for each occurrence, and estimating changes to acreages of suitable habitat areas.
- Perform a qualitative analysis to include estimating the population viability, phenology, and evidence of reproduction; identifying associate species; identifying invasive, exotic species and documenting their degree of threat; and assessing the topographic position, moisture regime, amount of sunlight reaching *H. naniflora* plants, as well as other natural and human threats to the species, including but not limited to stream bank erosion, all-terrain vehicles, effects from historical herbicide applications and the lack of such applications in the future, effects from drought or excessive precipitation, and land clearing and draining activities.
- Prepare a North Carolina Natural Heritage Program (NCNHP) - Endangered and Rare Plant Field Survey Form that incorporates both types of data.
- Analyze population trends by comparing recent size estimates to data from previous years.

Status: This monitoring report documents the second of three post-construction monitoring efforts associated with EO No 32 along the former TIP U-2528AA.

Status of terms and conditions from applicable NC Plant Conservation Program permits:

No applicable permits from the NC Plant Conservation Program have been applied for or been issued for this project.

Discretionary actions undertaken by NCDOT and partners:

From page 2 of the former TIP U-2528AA BO issued May 10, 2001; conservation recommendations included:

(1) The agreement (or deed restriction) will include a provision that any management recommendations we make will be implemented, if resources are available, and that access into the preserve will be granted for our representatives and representatives from State resource agencies with prior notification to the owner.
Status: Management recommendation in the form of a draft conservation plan for the Murray's Mill Conservation Area has been approved by the Service, NCNHP and NCDOT but not the Catawba County Historical Association.

(2) The deed for the acquired site will identify that this area was purchased for conservation purposes.
Status: It is not NCDOT policy to place deed restrictions on properties purchased fee simple. To ensure this property remains protected in perpetuity all sites purchased or maintained by NCDOT for threatened and endangered species mitigation are placed on the existing Natural Environment Section's (NES) Mitigation GeoDatabase. This geo-referenced database includes the location and boundaries of NCDOT fee simple owned mitigation sites as well as all mitigation sites that are held in Conservation Easement. This database is provided to and accessible to the public as a record of mitigation sites and their attributes, including permit conditions and prohibited activities. Information including new mitigation sites or changes in status to sites is updated at a minimum quarterly or more often as updates are needed. (http://www.arcgis.com/home/item.html?id=d560dfeb1ea443b299ca7fc68b2506b4)

(3) The Service's Asheville Field Office will be notified at least one month in advance of the start of construction for all three projects to allow an opportunity to transplant specimens from project impact areas.
Status: None of the *H. naniflora* specimens found along the former U-2528AA project have ever been, or are anticipated to be, transplanted to another area.

-No other discretionary activities (i.e. rescue, relocation, augmentation or management) other than what is listed above have been or are anticipated to be undertaken by NCDOT and its partners.

Appendix A. Monitoring Data & Discussion

Census counts were conducted by RK&K biologists Hal Bain and Pete Stafford on June 18, 2013. This census was a direct count following the method used during the 2011 survey. Figures 1 and 2 depict EO 32 as determined during the 2013 monitoring period. Plant survey results are documented in Table 1 for 1995, 2000, 2011, and 2013.

Table 1. *Hexastylis naniflara* (NHP EO Number 32) by quadrant of former TIP No. U-2528AA

Quadrant of I-40 Interchange	1995			2000			2011			2013

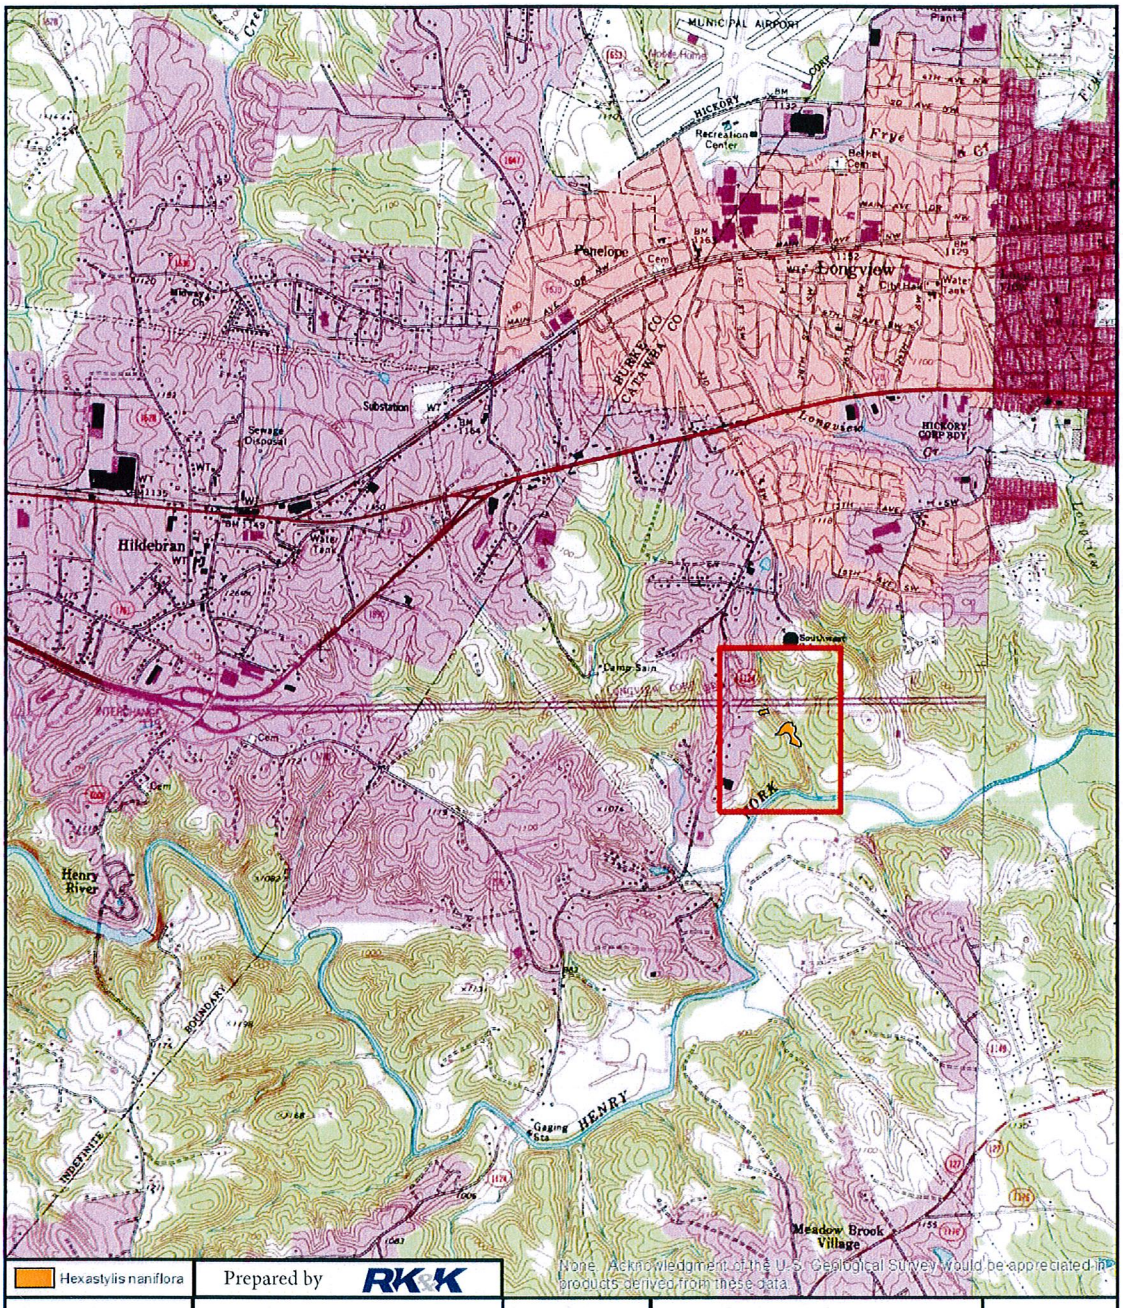
Totals	**3.5**	**6450**	**1843**	**3.5**	**6330**	**<1809**	**2.1**	**820**	**390**	**2.1**	**734**	**350**



* The 2000 survey was initiated to accommodate a design change. The design in the northeast quad was changed in 2000 to a loop nested in the northwest ramp thus eliminating impacts to entire northeast quad (250 plants). Because baseline data was already available from 1995, no further surveys were conducted in 2000 in the northeast and southeast quads. However, surveys in the northwest and southwest quads revealed additional plants there. On March 22, 2007 & May 3, 2011 NCDOT biologists conducted surveys in the northeast quad. It was determined that *H. naniflora* no longer exists in that quad because of poor habitat which has been overtaken by the invasive *Pueraria lobata* (kudzu).
t The methods for enumerating plants were inconsistent between baseline estimates (1995 & 2000) and the 2011 census count.
Beginning with the first monitoring phase in 2011, methods will remain consistent to allow for better ability to track population trends.
:j: The original 1995 survey revealed no plants in the northwest and southwest quads.

Methods for enumerating plants were inconsistent between years. In 2011, plants were enumerated via direct census count; however baseline surveys prior to 2011 were conducted using sample plots and estimating density using a subset of the population. Beginning with the first monitoring phase in 2011, methods remain consistent to allow for better ability to track population trends in the future. The delineated plant area was unchanged from the 2011 survey.

Although a true long term trend analysis between the 1995 and 2013 surveys cannot be performed due to the discrepancies in survey methods discussed above, casual observations at each quad reveal that the number of plants and the density of the populations have decreased or have been completely eradicated since pre-construction. Direct and indirect adverse effects from this project included disturbance from construction activities, effects of population fragmentation and a partial clear cut of the northwest quad severely degrading the population in that portion of the project area. Furthermore, it was noted in the U-2528AA BOs (August 3, 1995 & May 10, 2001) that the ensuing development resulting from project completion would likely eliminate a large portion if not all of the occurrence.

The short term trend for this population (EO 32) is declining. The 2011 survey resulted in a population density of 390 plants per acre (820 total plants) and the 2013 survey resulted in a density of 350 plants per acre (734 total plants), representing a 10.5% decrease. Field survey staff could not ascertain the cause of population decline as there were no visible reasons.

Species: *Hexastylis naniflora* **Common name**: Dwarf-flowered Heartleaf **Survey date**: 06/06/13

EO Number (if updating existing EO): 32 **County**: Catawba **7.5' Quad Map**: Longview, NC

Coordinates (if known): **Elevation**: 900'to 1000'
If coordinates given, indicate coordinate system and datum (State Plane 1927 or 1983, UTM, etc):

Site Name (if this is within previously identified site): Former TIP No. U-2528AA (Current TIP R-9999L)

Site location and directions: From westbound interstate I-40 take exit 121. From the top of exit ramp, turn right onto Old Shelby Rd. Travel 0.3 mile and turn left onto Sweet Bay Ln. Travel 0.2 mile and E032 is located on both sides of the road. (attach copy of map with site marked or use back of form to draw a sketch of the site):
See attached Figures 1 and 2.

Number of individuals: 734 (direct count) **Define individual** (stem, clump, etc.): Rosettes and stems

Size of area in which population occurs: 2.3 acres

Estimate whether the entire population was surveyed, or only a portion: Entire

Estimated Population Viability (circle one): Excellent Good Fair Poor Unknown Failed to find
Population Viability Comments: Young plants and flowers observed during survey.

Phenology (include % or # in each stage): vegetative N/A bud N/A flower N/A

Evidence of reproduction: fruit N/A seedlings N/A clonal/vegetative N/A

Reproduction Comments: Young plants observed during survey.

Habitat (NC NHP natural community name and description, if known; include quality, soils, geology, etc.): Dry-Mesic Oak-Hickory Forest. Mapped soils include Clifford sandy loam, Fairview gravelly fine sandy loam. This EO consists of medium quality habitat.

Associated species: The canopy is dominated by *Pinus taeda, Quercus alba, Q. rubra, Carya glabra, Acer rubrum, Liriodendron tulipifera*, and *Fagus grandifolia*. The understory consists of *Juniperus virginiana*, *Pinus taeda, Carpinus caroliniana, Oxydendrum arboretum, Acer rubrum, Cornus florida, Ilex opaca*. The shrub layer includes *Rhododendron* sp. and *Rubus* sp. Woody vines included *Vitis rotundifolia, Smilax* sp., and *Toxicodendron radicans*. The herb layer is sparse to moderately dense and includes *Hexastylis naniflora*, *Goodyera pubescens*, and *Tipularia discolor.*

Invasive species noted & degree of threat from invasive species: *Lonicera japonica, Ligustrum sinense, Albizia julibrissin*

Area of apparently suitable habitat (suitable for, but not necessarily occupied by the species): Approximately 3+ acres. Habitat potentially suitable south of population area and north of Henry Fork along UT to Henry Fork.

If the population is within a Right-of-Way, does suitable habitat exist outside Right-of-Way? Yes

Topographic position (examples: crest, mid slope, alluvial, etc.): Top to bottom of slope

Moisture regime (examples: inundated, dry, seasonally wet, etc): Dry-mesic

Light (examples: open, woodland, closed canopy, etc): Woodland

Other information: Population located north of Sweet Bay Ln. is oriented as north facing (N). Population south of Sweet Bay Ln. is facing east-northeast (ENE).

Protection / management needs and opportunities: This population could be evaluated for a conservation easement.

Landowner(s), if known: North of Sweet Bay Ln. – NCDOT. South of Sweet Bay Ln. – Arthur William Anderson

Person making this report, Address, & Phone: Pete Stafford, RK&K Consulting Engineers

Viability Rank: BD - Good, fair, or poor estimated viability
Rank Date: 2008-12-15
Rank Comments: Ranked by J. Holling, data manager. Unsure if easement ever procured or if population is being protected.
Population Data: 1998(Williamson, Newberry, Duncan): Population consists of approximately 1000 plants, most of which occue on a proposed 50 ft. sanitary sewer easement. 1999: Three hundred fifty eight plants were transplanted into EO 49 and a 1.3 acre preserve set up near there. 2001-04-30(Newberry): Around 500 plants still persist here. A particularly nice clump is located in the ravine north of Dill Cir. 2001-07-25(Newberry): Following sanitary sewer construction, about 200-250 plants remain in one area, with another 200-300 plants in a second area.
Habitat: 1999: On well-drained, Pacolet soils, along the lower to mid-slopes of moderately forested hardwood uplands. 2001-07-25: In woods adjacent to sewer line right-of-way paralleling west bank of Page Creek and Dill Circle and at base of north facing slope just north of Dill Circle and west of right-of-way.
Directions: Located adjacent to Page Creek, approximately 680 feet west of its intersection with Red Hill Road (SR 930). 2001-04-30: In the ravine north of Dill Circle. 2001-07-25: The land just north of Dill Circle and west of right0of0way has recently been purchased by R. Dawson and J. Storin, and an easement is being sought.
Land Owner: R. Dawson & J. Storin-, -

Rank Date: 2008-12-12
Rank Comments: Ranked by J. Holling, data manager. Fairly large population on preservation.
Population Data: 1998(Williamson, Newberry, Duncan): Approximately 1600 plants, most of which are located within a proposed 50 ft sanitary sewer easement. Population is to be relocated to a protected, suitable habitat in the vicinity of current location. 1999-12: Three hundred and fifty eight plants from EO 50 on Pages Creek were transplanted into this population and a 1.3 acre preserve set up here. 2001-04-30(Newberry): Currently, there are well over 500 platns in the new Spartanburg Water Systems preserve here. 2001-07-27(Newberry): With recruitment and plants already present in the preserve, there are between 750-850 plants at this location.
Habitat: It is on well drained, Pacolet soils, along the lower to mid-slopes of moderately forested hardwoods.
Directions: Population is adjacent to an un-named perennial tributary of Page Creek, approximately 350 ft. east of its intersection with Campbell Ave. (SR-1258).

Population Data: Numerous clumps.
Habitat: Scattered in low wet woods leading down into the North Enoree River floodplain. Piedmont seepage forest with abundant growth of Japanese privet and Vietnam grass.
Directions: Cooley Bunched Arrowhead. Site is about 5 miles northwest of Travelers Rest, just north of Belvue School Road. From the junction of S-173 and Belvue Church Road, take Belvue Church Road 0.4 mile northwest and look for distrubed Virginia Pine along road frontage. Go north into hardwood bottoms, downslope towards river.
Land Owner: SC Dept. of Natural Resources-Belvue Springs Heritage Preserve

Not Found:
Observer: C.S. Carr; E. Fabio; G. Newberry
Viability Rank: BC - Good or fair estimated viability
Rank Date: 2008-12-16
Rank Comments: Ranked by J. Holling, data manager. Population on USC-Spartanburg land, but unsure of protection or management.
Population Data: 2000-06(Carr): Several locations, with one plant observed observed 200-250 feet downstream of other plants. 2000-10(Fabio & Newberry): 250-300 plants.
Habitat: Observed along the stream banks. The single plant was on the stream bank of a steeply sloped, entrenched area. 2000: On north facing slope on south side of creek, in a narrow zone below hill and above sewer line. A dirt track leading east from Rampey Center and athletic field transects the population. Associated species include *Kalmia latifolia*, *Galax aphylla*, and *Epigaea repens*. At one time, the population probably extended all the way to the stream. Clear cutting and the construction of the sewer line appear to have extirpated the lower portion of the population.
Directions: USC Upstate campus. Near the nature trail at the Child Development Center. 2000: Lawsons Fork Creek at east edge of campus.
Land Owner: University of South Carolina Upstate-

19	**71.000**	BC	Knob Creek NA	300	2005	2005	Clev	N	
20*	**77.000***	CD	Little Gunpowder Creek Rare Plant Site 2	699	2013	2007	Cald	Y	DOT monitors. Three subpops - B is entirely in ROW, A and C are partially in ROW. Per the Amended Biological Opinion, NCDOT agreed to protect 90 plants within Subpopulation C by acquiring additional right-of-way. No other plants were agreed to be protected. However, additional right-of-way was acquired on the west side of Deal Mill Road for a stream mitigation project. In so doing, additional plants were thereby protected. (After conducting monitoring in 2013, it was determined that 37 plants from Subpopulation B and 52 plants from Subpopulation A are also under protection. In addition, 201 plants in Subpopulation C now exist within the expanded right-of-way, and therefore are also under protection.) Plants in ROW as of 2013 total 617. Per 2015 Draft monitoring report, there are now 699 plants. ROW acquired for formal protection.
21	**85.000**	D	Buffalo Creek: northeast of SR 1903	267	2005	2005	Clev	N	EO is associated with NC DOT project B-3828. No impact planned. No formal protection.

Species: *Hexastylis naniflora* (Dwarf-flowered heartleaf)

Site: [Former TIP No. U-2414A Tate Boulevard SE] (Catawba County)

NC NHP EO number(s): 30, EO ID 14501

NCDOT Point of Contact (POC): Cheryl Gregory, Tim Bassette, Jared Gray

Signed ROW occurrence? No

Site management plan: N/A

Site protections:
A small portion of this occurrence (82 plants, November 3 & December 12-13, 2011 surveys) is situated within the existing North Carolina Department of Transportation right-of-way (north and south) of Tate Boulevard (SR 1692). This portion of the occurrence, however, is a roadside population that is not under formal protection from a binding agreement. The remainder of the occurrence, which sits outside of the existing NCDOT right-of-way, is not under any formal protection from a binding agreement.

Origin of species at this site: Native

Status of species at this site: Extant

Species short-term trend at this site (relative to last count): Unknown

Species long-term trend at this site (averaged over multiple counts): Unknown

---

Status of NCDOT commitments pledged during ESA Section 7 consultations:

A. **NCDOT project ID**: R-9999L, Tate Boulevard Former TIP U-2414A
USFWS log number: 4-2-94-034

On September 11, 1995 the United States Fish and Wildlife Service gave concurrence with the not likely to adversely affect determination pertaining to project U-2414A. Per the USFWS letter of concurrence for former TIP U-2414A, NCDOT has not pledged any actions that directly relate to the rescue, monitoring and/or management activities of *H. naniflora*.

B. **NCDOT project ID**: TIP No. R-2824 (Upgrade of Existing Lovelady Road (SR 1546) from Laurel Street (SR 1545) in Valdese to Malcolm Boulevard (SR 1001) in Rutherford College, Burke County, North Carolina.
USFWS log number: 4-2-09-367

From pages 31-34 of the Biological Assessment for TIP R-2824 (Proposed Upgrade of Lovelady Road, May 8, 2009), and Appendix B of the Biological Opinion for the same project (November 13, 2009), NCDOT committed to assist USFWS with the five-year review process by providing information about several populations of *H. naniflora* that are either held in conservation easements or occur within

NCDOT right-of-way (this assistance serves as a conservation measure for R-2824). The population of *H. naniflora* associated with U-2414A is included in this group.

Because *H. naniflora* is located within the right-of-way of U-2414A, NCDOT will monitor Element Occurrence No. 30 associated with U-2414A, the results of which will be incorporated into the data spreadsheet, submitted to USFWS annually on January 1. Information generated by the following activities will be included in the spreadsheet.

Every two years for no more than six years, NCDOT will:
• Enumerate plants via direct count and/or sample plot estimates.
• Delineate changes to the population boundary using GPS/GIS, computing changes to acreages of occurrence areas, computing *H. naniflora* plant densities for each occurrence, and estimating changes to acreages of suitable habitat areas.
• Perform a qualitative analysis to include estimating the population viability, phenology, and evidence of reproduction; identifying associate species; identifying invasive, exotic species and documenting their degree of threat; and assessing the topographic position, moisture regime, amount of sunlight reaching *H. naniflora* plants, as well as other natural and human threats to the species, including but not limited to stream bank erosion, all-terrain vehicles, effects from historical herbicide applications and the lack of such applications in the future, effects from drought or excessive precipitation, and land clearing and draining activities.
• Prepare a North Carolina Natural Heritage Program – Endangered and Rare Plant Field Survey Form that incorporates both types of data.
• Analyze population trends by comparing recent size estimates to data from previous years.

Status: This monitoring report documents the first of three post-construction monitoring efforts associated with EO No. 30 along the former U-2414A.

Status of terms and conditions from applicable NC Plant Conservation Program permits:
No applicable permits from the NC Plant Conservation Program have been applied for or been issued for this project.

Table 1. *Hexastylis naniflora* data for former TIP No. U-2414A (EO 30)				
Location	**1996/2001***	**2011**	**Size (ac)**	**Density (plant/ac)**
North of Tate Blvd	No Data	3,425	4.24	808
South of Tate Blvd	No Data	1,607	2.36	681
Totals	**No Data**	**5,032**	**6.60**	**762**
* These surveys were conducted using a presence/absence method and no individual species counts were recorded.				

Discretionary actions undertaken by NCDOT and partners:
No discretionary activities (i.e. rescue, relocation, augmentation or management) have been or are anticipated to be undertaken by NCDOT and its partners.

Appendix A. Monitoring Data and Discussion

Surveys were conducted by NCDOT biologists on April 17, 1996, prior to roadway alternative selection and again on October 9, 2001 prior to project construction. These surveys were conducted using a presence/absence method; no individual species counts were recorded. Following project commitments established for R-2824 (Lovelady Rd), surveys were again conducted north and south of Tate Boulevard by NCDOT biologists Tim Bassette, Jared Gray, Matt Haney, Neil Medlin, Steve Mitchell and Heather Wallace on November 3 and December 12-13, 2011. During these 2011 surveys, plants were enumerated via a direct census count and the population boundary was GPS located and recorded. Figures 1 and 2 depict EO 30 as determined during the 2011 monitoring period. No NCNHP Field Survey Forms were completed for the 2011 monitoring period. Because no baseline data was collected, population trends cannot be determined at this site.

Hexastylis naniflora
None. Acknowledgment of the U.S. Geological Survey would be appreciated in products derived from these data.

Status of NCDOT commitments pledged during ESA Section 7 consultations:

A. **NCDOT project ID:** R-9999L, Tate Boulevard Former TIP U-2414A
USFWS log number: 4-2-94-034

On September 11, 1995 the United States Fish and Wildlife Service (USFWS) gave concurrence with the not likely to adversely affect determination pertaining to project U-2414A. Per the USFWS letter of concurrence for former TIP U-2414A, NCDOT has not pledged any actions that directly relate to the rescue, monitoring and/or management activities of *H. naniflora*.

B. **NCDOT project ID:** TIP No. R-2824 (Upgrade of Existing Lovelady Road (SR 1546) from Laurel Street (SR 1545) in Valdese to Malcolm Boulevard (SR 1001) in Rutherford College, Burke County, North Carolina.
USFWS log number: 4-2-09-367

From pages 31-34 of the Biological Assessment for TIP R-2824 (Proposed Upgrade of Lovelady Road, May 8, 2009), and Appendix B of the Biological Opinion for the same project (November 13, 2009), NCDOT committed to assist USFWS with the five-year review process by providing information about several populations of *H. naniflora* that are either held in conservation easements or occur within NCDOT right-of-way (this assistance serves as a conservation measure for R-2824). The population of *H. naniflora* associated with U-2414A is included in this group.

Because *H. naniflora* is located within the right-of-way of U-2414A, NCDOT will monitor Element Occurrence (EO) No. 30 associated with U-2414A, the results of which will be incorporated into the data spreadsheet, submitted to USFWS annually on January 1. Information generated by the following activities will be included in the spreadsheet.

Every two years for no more than six years, NCDOT will:

- Enumerate plants via direct count and/or sample plot estimates
- Delineate changes to the population boundary using Global Positioning System/Geographic Information System, computing changes to acreages of occurrence areas, computing *H. naniflora* plant densities for each occurrence, and estimating changes to acreages of suitable habitat areas.
- Perform a qualitative analysis to include estimating the population viability, phenology, and evidence of reproduction; identifying associate species; identifying invasive, exotic species and documenting their degree of threat; and assessing the topographic position, moisture regime, amount of sunlight reaching *H. naniflora* plants, as well as other natural and human threats to the species, including but not limited to stream bank erosion, all-terrain vehicles, effects from historical herbicide applications and the lack of such applications in the future, effects from drought or excessive precipitation, and land clearing and draining activities.
- Prepare a North Carolina Natural Heritage Program – Endangered and Rare Plant Field Survey Form that incorporates both types of data.
- Analyze population trends by comparing recent size estimates to data from previous years.

Status: This monitoring report documents the second of three post-construction monitoring efforts associated with EO No. 30 along the former U-2414A project.

Status of terms and conditions from applicable NC Plant Conservation Program permits:
No applicable permits from the NC Plant Conservation Program have been applied for or been issued for this project.

Discretionary actions undertaken by NCDOT and partners:
No discretionary activities (i.e. rescue, relocation, augmentation or management) have been or are anticipated to be undertaken by NCDOT and its partners.

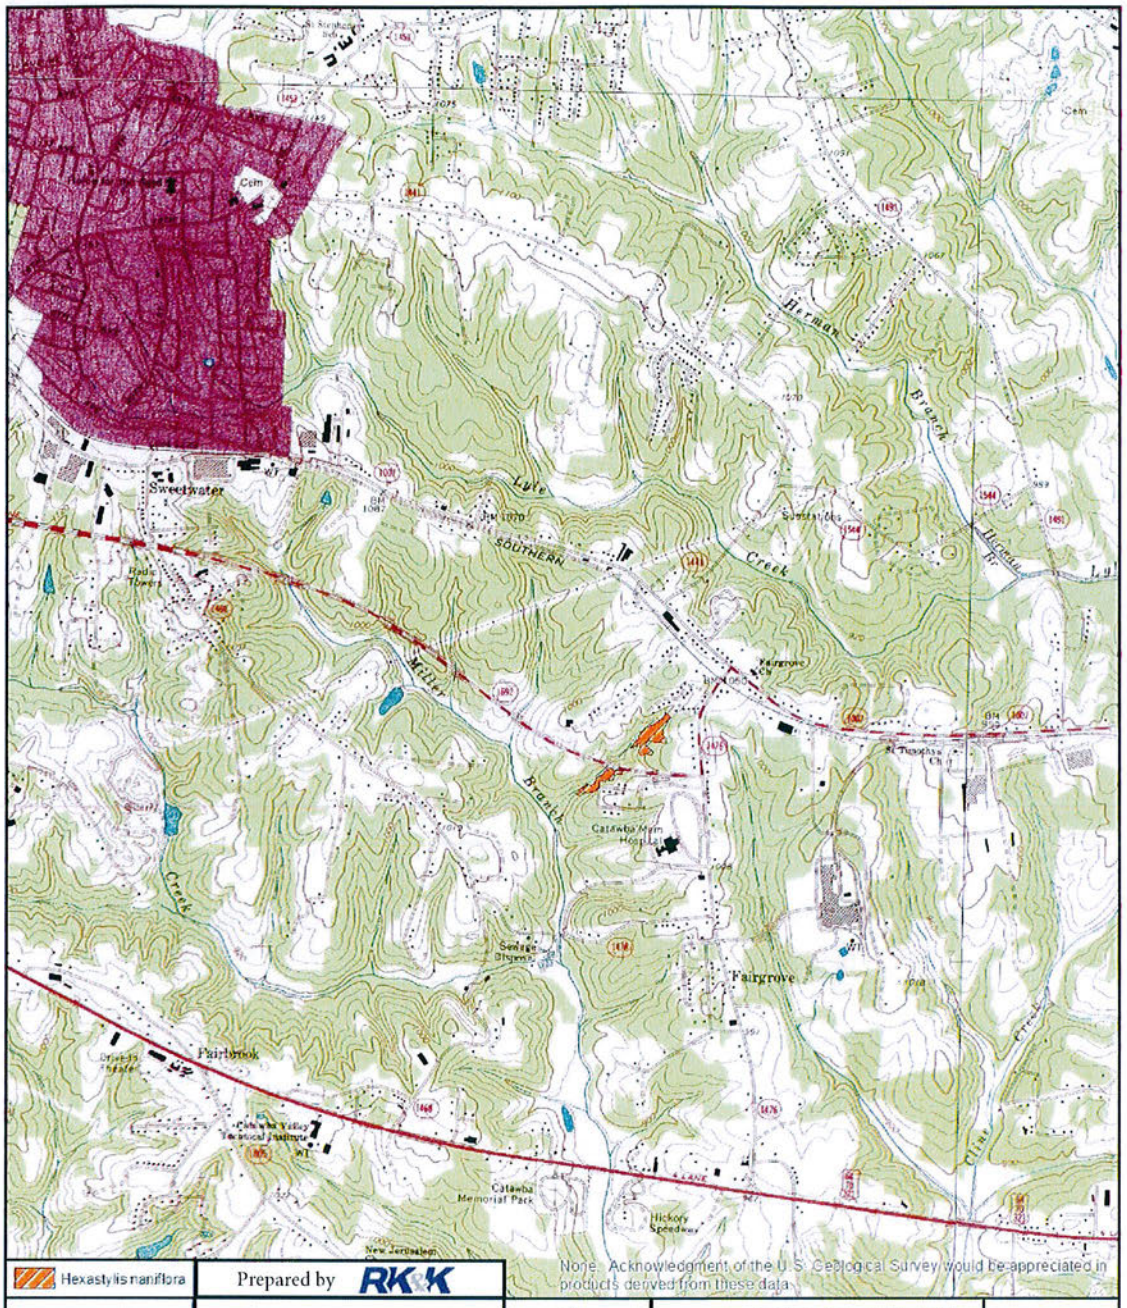
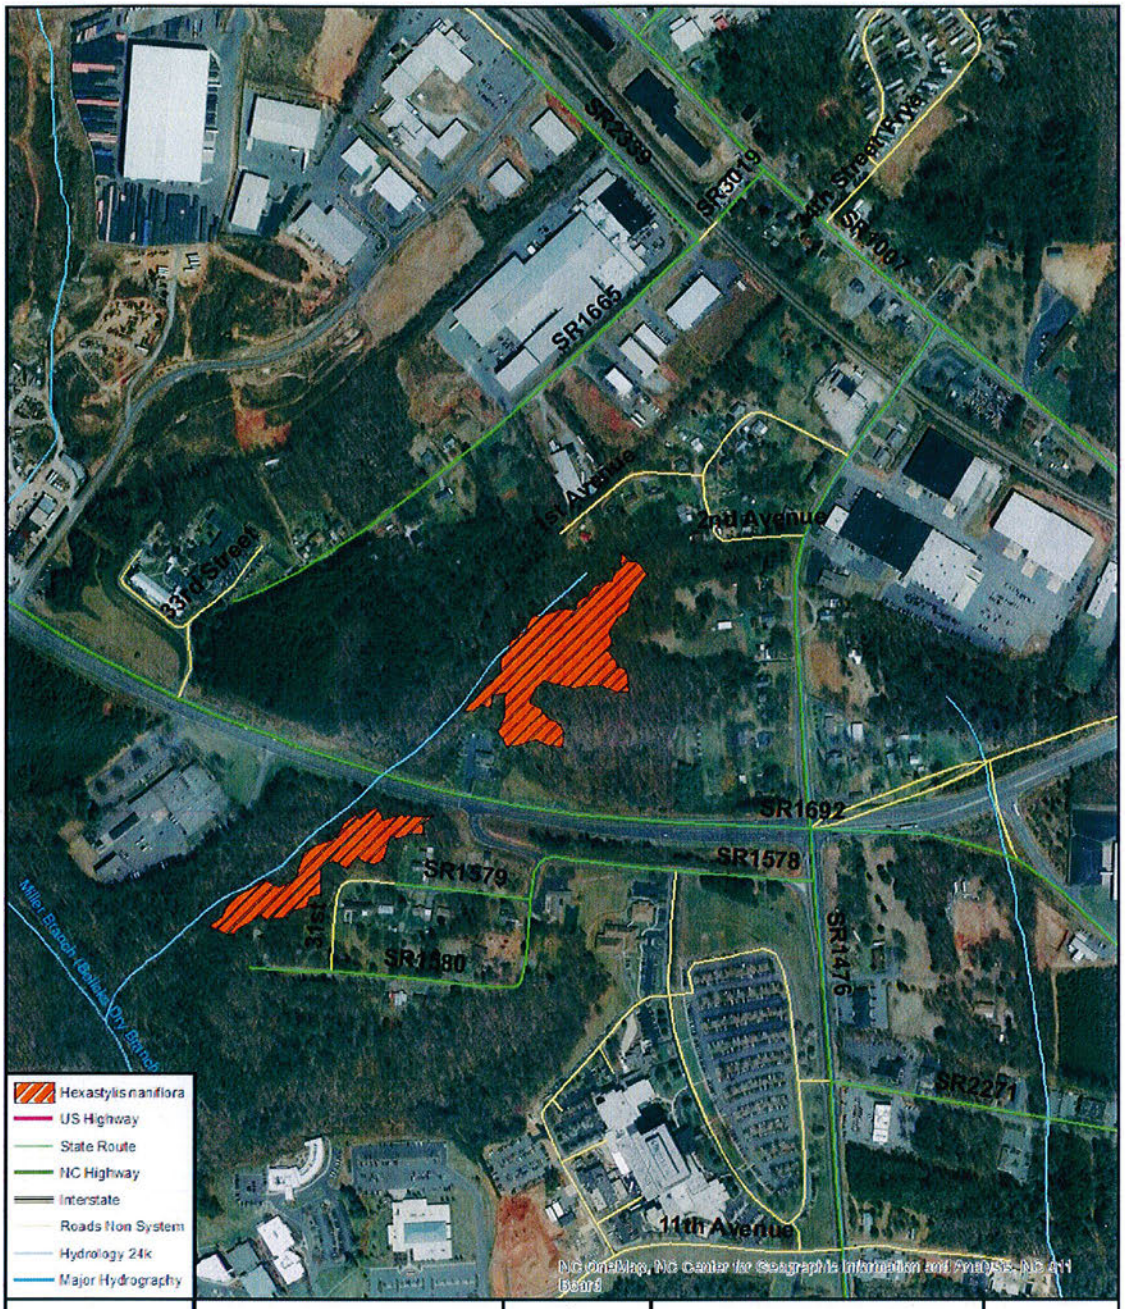
Appendix A. Monitoring Data and Discussion

RK&K biologist Hal Bain and Pete Stafford conducted a survey on June 5, 2013. During the 2011 and 2013 surveys, plants were enumerated via a direct census count and the population boundary was GPS located and recorded. Figures 1 and 2 depict EO 30 as determined during the 2011 and the 2013 monitoring periods. The population boundary was re-delineated in 2013 and found no change from the 2011 boundary. Table 1 displays the results of the 2013 survey.

Table 1. *Hexastylis naniflara* (NHP EO 30) of former TIP No. U-2414A



Location	1996/2001*	2011			2013		
	Plant #	Population Size (acre)	No. Plants	Density (plant/ac)	Population Size (acre)	No. Plants	Density (plant/ac)
North of Tate Blvd.	No Data	4.24	3,425	808	4.24	3,013	711
South of Tate Blvd.	No Data	2.36	1,607	681	2.36	1,706	723
Totals	**No Data**	**6.60**	**5,032**	**762**	**6.60**	**4,719**	**715**



*These surveys were conducted using a presence/absence method and no individual species counts were recorded.

Beginning with the first monitoring phase in 2011, methods remain consistent to allow for better ability to track population trends in the future. The delineated plant area was unchanged from the 2011 survey.

The short term trend for this population (EO 30) is declining. The 2011 survey resulted in a population density of 762 plants per acre (5,032 total plants) and the 2013 survey resulted in a density of 715 plants per acre (4,719 total plants), representing a -6.3% decrease in total plant numbers. The cause of population decrease is not known, however, on the northern most end of the population north of Tate Blvd., invasive English ivy (*Hedera helix*), has infested the population that has probably resulted in some population mortality.

Return form to: N.C. Natural Heritage Program, 1601 MSC, Raleigh, NC 27699-1601. Visit www.ncnhp.org.

Species: *Hexastylis naniflora* **Common name**: Dwarf-flowered Heartleaf **Survey date**: 06/05/13

EO Number (if updating existing EO): 30 **County**: Catawba **7.5' Quad Map**: Hickory, NC

Coordinates: Population North of Tate Blvd. Not processed per agreement with Plaintiff/Requester Not processed per agreement with Plaintiff/Requester, Population South of Tate Blvd Not processed per agreement with Plaintiff/Requester Not processed per agreement with Plaintiff/Requester

If coordinates given, indicate coordinate system and datum (State Plane 1927 or 1983, UTM, etc): WGS (decimal degrees)

Elevation: Population North of Tate Blvd. 960'to 1000', Population South of Tate Blvd. 920'to 940'

Site Name (if this is within previously identified site): Former TIP No. U-2414A (Current TIP R-9999L)

Site location and directions: From exit 128 on I-40 in Conover, NC, turn right onto Fairgrove Church Rd and travel 0.9 mile to Tate Blvd. Turn left onto Tate Blvd. and travel 140 feet. Site EO will be on both sides of the road. (attach copy of map with site marked or use back of form to draw a sketch of the site): See attached Figures 1 and 2

Number of individuals: 4,719 (direct count) **Define individual** (stem, clump, etc.): rosettes and stems

Size of area in which population occurs: 6.6 acres

Estimate whether the entire population was surveyed, or only a portion: Entire

Estimated Population Viability (circle one): Excellent Good Fair Poor Unknown Failed to find
Population Viability Comments: Young plants and flowers observed during survey.

Phenology (include % or # in each stage): vegetative N/A bud N/A flower N/A

Evidence of reproduction: fruit N/A seedlings N/A clonal/vegetative N/A

Reproduction Comments: Young plants observed during survey.

Habitat (NC NHP natural community name and description, if known; include quality, soils, geology, etc.): Dry-Mesic Oak-Hickory Forest. Forest cover types are fairly similar both north and south of Tate Blvd. Delineated population boundary are located on Fairview clay loam and Clifford sandy loam soils. This EO consist of high quality habitat.

Associated species: The canopy is dominated by *Quercus alba*, *Q. rubra*, *Carya glabra*, *Acer rubrum*, *Liriodendron tulipifera*, and *Fagus grandifolia*. The understory consists of *Carpinus caroliniana*, *Oxydendrum arboretum*, *Acer rubrum, Cornus florida*, *Ilex opaca*. The shrub layer includes *Rhododendron* sp., *Rubus* sp., and *Euonymus americanus*. Woody vines included *Vitis rotundifolia*, *Smilax* sp., and *Toxicodendron radicans*. The herb layer is sparse to moderately dense and includes *Hexastylis naniflora*, *Goodyera pubescens*, *Polystichum acrostichoides*, and *Mitchella repens*.

Invasive species noted & degree of threat from invasive species: *Hedera helix* (moderate threat), *Lonicera japonica* (low threat), *Ligustrum sinense* (low threat), *Albizia julibrissin* (low threat)

Area of apparently suitable habitat (suitable for, but not necessarily occupied by the species): Approximately 8 acres along Miller Branch and an Unnamed Tributary of Miller Branch.

If the population is within a Right-of-Way, does suitable habitat exist outside Right-of-Way? Yes

Topographic position (examples: crest, mid slope, alluvial, etc.): Mid to bottom of slope

Moisture regime (examples: inundated, dry, seasonally wet, etc): Dry-mesic

Light (examples: open, woodland, closed canopy, etc): Woodland

Other information: Slope aspect is Northwest (NW)

Protection / management needs and opportunities: This occurrence could be evaluated for a conservation easement.

Landowner(s), if known: South of Tate Blvd. - Compass Group USA Inc.
North of Tate Blvd. – Howard L Pruitt Jr.

DESCRIPTION

General Description

Min. Elevation feet **Max. Elevation** feet

EO Observed Area acres

Rep Accuracy Medium

Separation Comments All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: A 1957 herbarium specimen from Bell (NCU 176117) states it was collected from a location 1.2 miles west of Cat's Square. Gaddy (1981) was unable to find the species at this location in 1980 and 1981, and regarded it as possibly extirpated. Gaddy did re-locate the species 0.4 miles west of Cat Square (the presumed location of NCU 176118, mapped as NCHP sub EO 003). [C. Wells, 2006].

Cat Square Heartleaf Forest

Survey Site
South Fork Catawba River: Indian Creek, Cat Square Site (Sub EO of EO 098).
Bell's Cat Square Site (per Gaddy, 1981)
Cat Square Heartleaf Forest

Directions South Fork Catawba River, Indian Creek west of Cat Square. Gaddy (1981) named site "(Bell's) Cat Square Site" in his status survey for NC PCP/USFWS, in reference to one of Bell's two 1957 herbarium specimens from this area (NCU 176118), which Bell describes as "0.4 miles west from Cat's Square". Bell's second 1957 herbarium specimen (NCU 176117) states it was from a location 1.2 miles west of Cat's Square. Gaddy was unable to find the species in this second location (further west) in 1981, but did re-locate the species 0.4 miles west of Cat Square (the presumed location of NCU 176118). NCNHP sub EO 002 refers to specimen NCU 176117, sub EO 003 refers to NCU 176118. Both are sub EOs of Parent EO 98 [C. Wells, 2006].Rich deciduous forest and stream banks 0.4 mile west of Cat Square (Bell 1957).

SURVEY INFORMATION

EO Rank D - Poor estimated viability **EO Rank Date** 1995

EO Rank Comment

EO Data **2001:** Present, Matthews et al. observed scattered through site on 02 April 2001 (Matthews et al. 2002).
1995: 160 plants observed by Newberry in 1995. Population stable and with many large plants. Houses have been built near site (Newberry 1996).
1981: 50-60 clumps in less than 1 acre observed by Gaddy in 1981, seed production and seedling distribution average, population seems stable despite timber operation (Gaddy 1981).
1980: Observed by Gaddy in 1980 (Gaddy 1980).
1957: Bell collection (1957).

DESCRIPTION

General Description Site A: Creekhead (to east of road) is mesic, well-drained with middle-aged to mature canopy. Bluff (west of road) is mesic to xeric, well-drained. site B (EO 180): Bluff, with mature canopy of Quercus alba, Pinus strobus, Fagus; understory of Acer rubrum; shrub layer of Kalmia and Rhododendron maximum.

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 16347

EO Number 5 **Parent EO Number** 101

Min. Elevation 1,130 **feet** **Max. Elevation** 1,200 **feet**

EO Observed Area 1.50 **acres**

Rep Accuracy High

Separation Comments All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: Site B has been split out as a separate sub EO (see EO 180) for better data organization; principal EO 101 represents both sub EO 005 and sub EO 180, in addition to sub EO 006 (Wichmann 2005). Subpop B was formerly EOR #007 (Russo 1995).

Poundingmill Creek (per Gaddy, 1981)

Directions First Broad River: Knob Creek, unnamed tributary south of Zion Hill church and east of SR 1552. Creekhead along east side of SR 1552, about 0.5 mile south of junction with SR 1555.

SURVEY INFORMATION

EO Rank D - Poor estimated viability **EO Rank Date** 2000
EO Rank Comment
EO Data Padgett observed less than 20 plants scattered down slope to creek; few flowers, no seedlings seen during spring of 2001 and 2002 (Padgett 2005). Newberry observed 200-300 plants in ravine on east side of SR-1552 in 1996, just south of old home site. There was much trash in the upper portion of the population (Newberry 1996). LeGrand reported in 1989 that the site is still wooded (LeGrand 1989). LESS THAN 10 CLUMPS PRESENT OVER 16 SQM OBSERVED BY GADDY IN MAY 1981; NO SEED PRODUCTION NOTED; NO SEEDLINGS OF ANY AGE SEEN; FLOWERS AT THIS SITE WERE EXCEPTIONALLY SMALL (GADDY 1981).

Broad River: Hensons Creek Natural Area [Henson's Creek Ravine]
(Sub EO of 099)
Henson's Creek Ravine (per Gaddy, 1981)

Directions Broad River: Hensons Creek Natural Area, west of SR 1106 and south of the Broad River, at Hensons Creek Ravine. This is a sub EO of parent EO 099 (Wichmann 2005). Hensons Creek Ravine: Ravine and bluff located along west side of SR 1106 along Hensons Creek, for 0.5 mile above its confluence with Broad River.

SURVEY INFORMATION

EO Rank AB - Excellent or good estimated viability **EO Rank Date** 2005-03-05

EO Rank Comment

EO Data **2012:** Padgett visited the site and observed plants in 2012, however plants were not counted or estimated (Padgett 2015).
2005: Padgett estimated 500 plants estimated in the ravine on 05 March 2005 (Padgett 2005).
1995: Newberry estimated the population to be about 500-600 plants in 1995 (Newberry 1996).
1981: Over 1000 clumps over a 10 acre area; plants located within the ravine and on a bluff, but no plants were found along the creek (Gaddy, 1981). One of the largest known populations (Gaddy 1981).

Site Name
Kudzu Farm Rare Plant Site

Survey Site
Broad River: Dills Creek, Kudzu Rare Plant Site (This is a sub EO of 099).
Kudzu Cow Farm (per Gaddy, 1981; in part)
USFWS Flex Fund Monitoring Site 2 (in part)

Directions Broad River: Dills Creek, Kudzu Farm Rare Plant Site: This is a sub EO of parent EO 099 (Wichmann 2005). In three suboccurrences: Suboccurrence A: SR 1122, about 0.8 road mile west of its intersection with SR 1111, along ravine draining into a tributary of Dills Creek; Suboccurrence B (former Subpopulation 1): Creekhead [east of triburary to Dills Creek], [located] approx 0.2 [air] mile south[southeast] of SR 1122, where road [SR 1112] crosses a small stream [tributary of Dills Creek], plants were found growing on banks of an eroded creek, hanging off the steep banks; Suboccurrence C: Ravine west of tributary to Dills Creek, located about 0.2 air mile southwest of SR 1122, from where SR 1112 cross a small tributary of Dills Creek (Wichmann 2005).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2013-07-17

EO Rank Comment EO rank based on EO rank specs for this species and most current EO data (Wichmann 2005).

EO Data **All sites combined:** Padgett counted 3,094 plants within monitoring plots of Parent EO 99 on 19 and 20 May 2014 and estimated 33,300 plants covering 24.61 acres of mapped area. Of the total, 388 plants were counted within the permant plot located at Sub EO 10 (Padgett 2014).
2013: Monitoring data is part of monitoring data for Principle EO 99 (Padgett 2013). 438 plants counted in monitoring plot at Sub EO 10 representing 10% of the population, by Padgett and Israel on 17 July 2013, for an estimate of 4000+ plants in the site.
2012: 186 plants were counted in permant plots by Padgett on 17 July 2012 after remapping and installing permant plot. Plant counts may have been low due ot the recent timber thinning and weedy growth (Padgett 2012).
2005: 500-750 plants estimated on May 2005 (Padgett 2005).
2001: Estimated 700 clumps plus single and double leaves present from the head of the stream to 120-150 yards downstream, plants in leaf and flower on 27 March (Padgett 2001).
1995: Gaddy's Cow Farm Site: 200-300 plants estimated at this site by Newberry in 1995 (Newberry 1996).
1981: About 200-300 plants growing on banks of eroding creek, hanging off steep banks; exceptionally vigorous, with 10-15 flowers on many plants, perhaps fertilized by cultivated field above site (Gaddy 1981).

DESCRIPTION

General Description This forest community was cut along the ridgetop and thinned along the stream where the EO is located in 2011 (Padgett). -- Mid-aged Dry-Mesic Oak--Hickory Forest commmunity along stream and moderatley steep north-facing slope. Canopy is dominated by Quercus alba, Quercus coccinea, Liriodendron tulipifera, Acer rubrum and Fagus grandifolia. Other associated species include Aralia nudicalus, sanguinaria canadensis, Polystichium achrostichoides, Hexastylis arifolia variety arifolia, and Goodyear pubescens (Padgett 2005). Creekhead, middle-aged canopy of Quercus alba, Acer rubrum, Fagus grandifolia. Other associated species include Rhododendron nudiflorum, Sanguinaria canadensis, Polystichum acrostichoides and Lonicera japonica (Padgett 2001).

Min. Elevation 720 **feet** **Max. Elevation** 800 **feet**

EO Observed Area 4.00 **acres**

Rep Accuracy High

Separation Comments This EO is comprised of three sub-occurrences (source features) which are located within 0.5 Kilometers of one another and are within the boundaries of the Kudzu Farm Rare Plant Site; Sub EO 181 was formerly subpopulation 2 of EO 010 but has been separated out as a sub EO since it is not within the Boundaries of the Kudzu Farm Rare Plant Site; All sub EOs are located within 2.0 kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

Directions Located to the south of Jacob Fork, north of Lynn Mountain Rd (SR 1108), and east of Wildlife Rd (SR 1109); primarily on Catawba Wildlife Club property. This is a sub EO of Parent EO 243 (Wichmann 2005).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 1995

EO Rank Comment One of the largest known populations (1981).

EO Data **2013:** Tried four times in May 2013 to get permission to visit site and did not get a return call or email (Padgett 2013).
2005: Gate locked, no data (Franklin et al. 2005).
1995: Over 1000 plants observed by Newberry in 1995 [count includes EO 242] (Newberry 1996).
1985: Verified by Moore (1985).
1981: Over 1000 plants in clearcut patches and mature mesic hardwood slope observed by Gaddy in May 1981; population very vigorous; seed production very good; many seedlings (Gaddy 1981).

Directions Broad River: Floyds Creek near Harris, Sandy Mush Rock Outcrop: This is a sub EO of Parent EO 247 (Wichmann 2005). Located about 0.2 mile north of SR 2149, about 0.6 mile west of its junction with SR 2210, south of Sandy Mush Community.

SURVEY INFORMATION

EO Rank D - Poor estimated viability **EO Rank Date** 2005-05
EO Rank Comment
EO Data **2005:** Less than 100 plants seen along two small unnamed streams; less than 50 plants seen along one of the streams, recent ATV use in the area has trampled some plants (Padgett 2005). Fewer than 50 plants seen (Padgett 2001).
2000: Partial survey, area not throughly seached; 4 clumps observed by Kranyik on 25 March 2000 (Kranyik 2000).
1995: 75-100 plants estimated by Newberry in 1995 (Newberry 1996).
1981: 50-75 plants found in boggy areas along small stream and on slopes along eastern margin of outcrop; seed production excellent; good population of seedlings present (Gaddy 1981).

Survey Site
Broad River/Sandy Run Natural Areas: Middle Sandy Run Creek & Grog Creek, Sub EO of EO 100).
NCDOT TIP: B-2119
NCDOT Broad River Mitigation Tract

Directions Broad River/Sandy Run Natural Areas: Middle Sandy Run Creek and Grog Creek, north of SR 1195 and south of Middle Sandy Run Creek and Grog Creek. This is a sub EO of Principal EO 100 (Wichmann 2005). Middle Sandy Run Creek just southeast and southwest of its confluence with Grog Creek, north of SR 1195; population extends for approximately 700 meters (Wichmann 2005). North-facing bluff along Sandy Run Creek just northwest of SR 1195 bridge across creek.

SURVEY INFORMATION

EO Rank C? - Possibly fair estimated viability **EO Rank Date** 2001-04

EO Rank Comment

EO Data 2009: Plants observed by Jones in January, April, and June 2009; no count made (Jones 2009).
2001: Large number of plants seen along steep slopes in April 2001 (Padgett pers. comm to Wichmann 2005).
2000: 177 plants total: 87 plants within project corridor and 90 plants outside of project corridor on 30 October 2000 (Bassette 2003).
1995: Newberry observed 20 plants in 1995 but noted that heavy tree fall had made the area hard to survey [east part of Newberry's occurrence overlaps EO 237] (Newberry 1996).
1981: Nearly 200 clumps total along steep slopes for this EO and EO 237; plants doing best around canopy openings; many seedlings seen, especially in light gaps (Gaddy 1981).

DESCRIPTION

General Description Steep Heath Bluff with Kalmia latifolia, Galax ucreolata, and Polystichium acrostichoides present (Padgett 2001). -Very steep bluff with rock outcrops. Plant community is Piedmont/Coastal Plain Heath Bluff or Mesic Mixed Hardwood Forest. Other species include Kalmia latifolia, Symplocos tinctoria, Fagus, Amelanchier arborea, Galax aphylla, Oxydendrum, Cornus florida, Heuchera americana, Carpinus, Thalictrum Thalictroides, Polystichum, Mitchella repens, Leucothoe axillaris, Arisostichus capreolata, Gelsemium sempervirens, Quercus sp., Antennaria solitaria, Hepatica americana (Murrell & Kelly 1993).

Min. Elevation 720 **feet** **Max. Elevation** 780 **feet**
EO Observed Area 1.00 **acres**

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 6228

EO Number 18 **Parent EO Number** 97

Rep Accuracy High

Separation Comments Remapped areas along creek at the location of the second bluff to reflect the actual location of this occurence on the ground (Padgett 2014). - All sub EOs area located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: Newberry (1996) reports the exact same locality information as Murrell and Kelly (1993) and notes they discovered the occurrence in 1993 but she maps the occurrence one bluff south of where Murrell and Kelly (1993) show it on their map. Strangely, the coordinate Newberry (1996) reports (351648N 814055W) falls within the Murrell and Kelly (1993) site; however, the source of this coordinate is not reported - unclear if Newberry generated it during her survey. Padgett confirmed he located plants at the Murrell and Kelly (1993) site in 2002 and that its location has been correctly digitized (pers. comm. to S. Mason, 22 April 2009). Padgett will visit the location Newberry indicated on her map to survey for plants; for now both locations are mapped in the NHP database under this EO (Mason 2009).

NCDOT TIP: R-0085 US 321 Bypass site id # 1, 2, and 3

Directions South Fork Catawba River: Henry Fork, small unnamed tributaries and US 321 (north), Sub of 252. 1 mile southwest of Mountain View School. 3 subpopulations [NC DOT Sites 1, 2 and 3] along unnamed tributaries to Henry Fork, east of SR 1008 and north of SR 1144.

SURVEY INFORMATION

EO Rank D? - Possibly poor estimated viability **EO Rank Date** 2007

EO Rank Comment Degraded habitat. Determine whether construction of Hwy 321 should downrank this EO (Franklin 2005).

EO Data **2014:** Gray reported in 2014 for that supop 1 was divided by US-321 construction and that it will be monitored in 2015; also, subpop 2 was extirpated due to construction; subpop 3 is extirpated at this site but plants from it were moved to Saranac Lake Preserve in SC in the 1990s (NCDOT 2014).
2007: 144 clusters observed at Site 1 by NCDOT in 2007 (NCDOT 2009).
1995/1996: Newberry reported the following conditons in 1995/1996: Site 1-- 100 plants remain north of the "new road" and none south of the road, site had 1000 plants prior to construction; Site 2-- no data reported; Site 3-- no plants remain, plants moved to Saranac Lake Presereve, SC and Site 4 (EO 020), site had 250-300 plants prior to construction (Newberry 1996). 20,000 plants [includes EO 020 (Wichmann 2005)] prior to NCDOT impact, unknown number impacted by US-321 Bypass (HDR personnel 2005). A total of 14,443 plants, scattered between EOs 19 and 20, were located in the construction project area (NCDOT 321) in 1995; more than 3,235 were expected to be impacted by improvement activities. Verification of the current situation is needed, including the number of plants protected on-site (Wells 2006).
1993: "Thousands of individuals seen at sites 1 through 3 [sub-populations A, B and C]" (Currie 1993).
Subpop A [site 1] =about 1000 plants (average 5.2 plants/100 sq ft) over 5.1 acres; Subpop B [site 2] =about 1000 plants (average 3.2/100 sq ft) over 3.7 acres; subpop C [site 3] =about 1000 plants (average 2/100 sq ft) over 3.7 acres; in leaf, flower & some fruit (Corda 1993).

DESCRIPTION

General Description Area Not processed per agreement with Plaintiff/Requester Not processed per agreement with Plaintiff/Requester full of weedy species, much of the area has been planted in pines and the drainage is thick with Toxicodenron radicans, Rosa multiflora, Diphasiastrum digitatum [Lycopodium flabelliforme], etc. (Franklin and Wichmann 2005). "Relatively good condition" (Currie 1993). Subpop A [site 1]=mature beech stand with occasional white pine; partly disturbed from fallen trees (Hurricane Hugo); Dry, mid to lower slope, open. Subpop B [site2] =Area dominated by mixed hardwoods; dry, lower to upper slope, open/filtered light. Subpop C [site3] =cut-over mixed hardwood/pine-dominated canopy; shrub growth rank; steep slope; dry, lower to upper slope, open/filtered light (Corda 1993).

Min. Elevation 920 **feet** **Max. Elevation** 1,000 **feet**

EO Observed Area **acres**

Rep Accuracy Medium

Separation Comments Within 2.0 kilometers of sub EO 020; EOs 019 and 20 were not separated by an area of persistently unsuitable habitat at the time of discovery and are therefore linked by principal EO 252 (Wichmann 2005).

General Comments:

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes
Unknown	PRIVATE?	

Owner Comments NCDOT is trying to purchase the property (NCDOT 2009).

Management Comments

Protection Comments EO seems to have been extirpated by construction of the 321 Bypass; no obvious quality habitat in the area (Wichmann 2005). "The Department of Transportation (DOT) will try to acquire in fee title additional righ-of-way at three of the five population sites [includes EO 020 (Wichmann 2005)] (approximately 1 acre at Site 1, 3 acres near Sites 2 and 3, and 1 acre at Site 4[EO 020]). A minimum of 1 site will be aquired within existing project right-of-way, If only one site is acquired on-site, the DOT, after consulting with the Service [FWS], will aquire at least one high quality Hexastylis naniflora site elsewhere in North Carolina (Currie 1993).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 13541

EO Number 19 **Parent EO Number** 252

Additional Topics

Some plants protected in conservation easments outside of construction zones at site1(sub pop 1) and 4 (EO 020 sub pop A) (Wichmann Aug. 2005, per. comm. with J. Gray NC DOT). EO seems to have been extirpated due to construction of the 321 Bypass (Franklin and Wichmann May 2005). "EO 185 (Old EO 19/20) is a large population that was surveyed prior to the construction of the US 321 Bypass south of Hickory. It was a healthy population in three separate areas that consisted of approximately 20,000 *H. naniflora* plants. During field-checking, it was discovered that this site may have been significantly impacted. However, much of the site is on private property and separated by a new NCDOT ROW fence, which prevented access. According to old survey maps, it is possible that road construction for US 321 and private logging on some of the north-facing slopes have likely impacted the population. Because this site is such a large percentage of the known *H. naniflora* numbers, it is strongly recommended that NCDOT conduct a comprehensive survey to determine population viability" (HDR personnel, 2005). NC DOT should be consulted to determine whether this EO was impacted by construction of Highway 321 (Franklin 2005). "Approximately 20,000 plants [includes EO 020], unknown number impacted, some preserved in ROW (HDR personnel, 2005). "This project will directly impact 9.0 acres of the total 11.0 acres within the project corridor that contain Hexastylis naniflora [includes EO 020 (Wichmann 2005)]. Sites 3 [EO 019] and 5 [subpop B] will be completely eliminated. Other direct and indirect impacts from this project include disturbance from construction activities that may lead to increased erosion of downslope areas and degradation of Hexastylis naniflora habitat" (Currie 1993). Proposed construction of road project is planned over sites (Corda 1993).

South Fork Catawba River: Henry Fork, Large unnamed tributary and US 321 (Sub of 252)
NCDOT TIP: R-2824
NCDOT TIP: R-0085 US 321 Bypass site id # 4

Directions South Fork Catawba River: Henry Fork, 0.3 miles east of Zion Church; just west of US-321Bypass. This is a Sub EO of Parent EO 252 (Wichmann 2005). Subpopulation A (Site 4): located southwest of Propst Drive (no SR #) and just west of US 321 bypass; Subpopulation B (Site 5): extirpated (Wichmann 2005). 2 subpopulations [subpopulation A/site 4 and subpopulation B/site 5 (Wichmann 2005)] Along unnamed tributary to Henry Fork, northeast of SR 1008 and southeast of SR 1920 (Corda 1993).

SURVEY INFORMATION

EO Rank B - Good estimated viability **EO Rank Date** 2005-05-12

EO Rank Comment EO rank is based on EO rank specs for this species (WIchmann 2005).

EO Data **2007:** 296 clusters observed at Site 4 by NCDOT in 2007 (NCDOT 2009).
2005: Estimate approximately 250 plants, 150 counted on 12 May 2005 (Franklin et al. 2005). Only one subpopulation (subpopulation A/site 4) remaining after construction of US 321 Bypass (Wichmann 2005).
2005: Approximately 20,000 plants in 3 separate areas [includes sub EO 019 (Wichmann 2005)]; heathly population prior to construction of US 321 Bypass south of Hickory, during field-checking, it was discovered that this site may have been significantly impacted (HDR personnel, 2005).
1995/1996: Newberry reported the following conditons in 1995/1996: Site 4-- Building of the road destroyed about 100 plants of the original 200; 133 plants from site 3 planted here so total number of plants present is about 200; Site 5-- destroyed by construction of the road (Newberry 1996). A total of 14,443 plants, scattered between EOs 19 and 20, were located in the construction project area (NCDOT 321) in 1995; more than 3,235 were expected to be impacted by improvement activities. Verification of the current situation is needed, including the number of plants protected on-site (Wells 2006).
1993: Subpop A (site 4): "approximately 500 plants"; Subpop B (site 5): "12 plants" (Currie 1993). Subpop A [site 4]=about 500-1000 plants (average 12 plants/100 sqm) over 0.5 acre; Subpop B [site 5] =12 plants over 10-100 sqm; in leaf & flower (Corda 1993).

DESCRIPTION

General Description Fairly mature Dry-mesic Oak Hickory Forest dominated by Quercus alba and Oxydendron arboretum; sub-canopy dominated buy Cornus florida and Acer rubrum; understory dominated by Carya ssp., Fagus grandifolia, Vaccinium sp., and Quercus spp.; herbaceous layer dominated by Polygonatum biflorum and Rhododendron Af. pariclymenoides. Other species present include: Vaccinium pallidum, Punus serotina, Dioscorea villosa, Lespedeza sp, Quercus lyrata, Euonymus americana, Carya alba, Quercus phellos, Nyssa sylvatica, Vitis rotundifolia, Ilex opaca, Mitchella repens, Amelanchier (juveniles), Juniperus virginiana, Uvularia sessilifolia, Quercus velutina, Quercus falcata, Chionanthus virginicus, Uvularia perfoliata, Polystichum acrostichoides, Viola hastata, Thalictrum thalictroides, Aureolata laevigata, Gallium sp., Carpinus caroliniana, Scutellaria elliptica, Scuttelaria sp., Carex sp., Hustonia tenuifolia, Sanicula Af. canadensis, and Quercus stellata (Franklin et al. 2005). Subpop A(site 4): "in relatively good condition"; Subpop B (site 5): "consists of a high to-medium quality wetland area (Currie 1993).Subpop A [site 4] =adjacent to dry creek bed dominated by a mixed hardwood stand; disturbed from Hurricane Hugo blowdowns; shrub growth rank; dry, mid to lower slope, filtered light/shaded. Subpop B [site 5]=on northwest-facing slope adjacent to a floodplain.

Min. Elevation 880 **feet** **Max. Elevation** 900 **feet**

EO Observed Area 1.50 **acres**

Rep Accuracy High

Separation Comments Within 2.0 kilometers of sub EO 019; EOs 019 and 20 were not separated by an area of persistently unsuitable habitat at the time of discovery and are therefore linked by Parent EO 252 (Wichmann 2005).

General Comments:

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2015-05-29
EO Rank Comment EO rank based on EO rank specs for the species (Wichmann 2005).
EO Data **2016:** 212 plants counted by Bloom on 13 May 2016. Estimated 1459 plants covering the entire remapped 1.39 acres (Bloom 2016).
2015: 211 plants counted by Padgett on 19 May 2015 in 0.14 acres of monitoring plots. Estimated 1700 total plants covering the entire 1.17 acres (Padgett 2015).
2014: Padgett counted 213 plants in permanent monitoring plots on 19 May 2014 and estimated a total of 1780 plants over 1.17 acres (Padgett 2014).
2013: Padgett counted 211 plants in permanent monitoring plots on 16 July 2013 and estimated a total of 1763 plants over 1.17 acres (Padgett 2013).
2012: 208 plants counted in 0.14-acre sample plot in 2012. Estimate of 1738 plants total. (Padgett 2012). This site was revisited by James Padgett and Laura Gadd (NHP) and remapped in June 2012.
900 counted, probably at least 1,000 plants (Franklin and Padgett 2005). 150-200 plants observed by Newberry in 1995 or 1996 (Newberry 1996). Stovall and Murdock disovered this occurrence in 1992 or 1993 (reported in Newberry 1996).

DESCRIPTION

General Description LOW ELEVATION SEEP (PIEDMONT/MOUNTAIN SPRINGHEAD SUBTYPE – Canopy is primarily Acer rubrum and Liriodendron tulipifera, but also includes Nyssa sylvatica and Fraxinus pennsylvanica. The sub canopy is primarily Acer rubrum, Ilex opaca, Carpinus caroliniana, and saplings of Fraxinus pennsylvanica and Fagus grandiflora. The shrub layer is predominately Viburnum nudum var. nudum, Vaccinium corymbosum, Rhododendron periclymenoides, Lindera benzoin, and Calycanthus floridus. Other shrubs found throughout are Amelanchier arborea and Itea virginica. Much of the shrub layer is bound up with Smilax laurifolia and less often with Smilax rotundifolia, Muscadinia rotundifolia, and Parthenocissus quinquefolia. The ground and many of the trees are covered with vines of Decumaria barbara. The herbaceous layer is dominated by Parathelypteris noveboracensis, Osmundastrum cinnamomeum, Osmunda spectabilis, and Lorinseria areolate. The herbaceous layer also includes Polystichum acrostichoides, Viola sororia, Arundinaria gigantea, Arisaema triphyllum, Medeola virginiana, Mitchella repens, and Microstegium vimineum. There were also a number of Trillium rugelii found in fruit.(Bloom 2016)
Nice Piedmont Boggy Streamhead (?) with Pinus virginiana, Quercus alba, Liriodendron tulipifera, Ilex opaca, Nyssa sylvatica, Carex lurida, C. intumescens var. intumescens, C. atlantica, C. debilis, Polystichum acrostichoides, Xanthorhiza simplicissima, Mitchella repens, Thelypteris noveboracensis, Fagus grandiflora, Vaccinum corymbosum, Ilex opaca, Microstegium vimineum, Rhododendron Af. periclymenoides, Toxicodendron radicans, Platanus occidentalis, Viola sororia [V. papilionaceae], Calycanthus floridus, Sassafrass albidum, Uvularia perfoliata, and Vitis rotundifolia (Franklin et al. 2005). Piedmont bog, shrubby, near cow pasture, cows have access to site, logging has recently occurred (1993).

Min. Elevation 820 **feet** **Max. Elevation** 919 **feet**

EO Observed Area 1.17 **acres**

Rep Accuracy High

Separation Comments Within 2.0 kilometers of EO 160 but not part of a principal-sub relationship due to topography and persistently unsuitable in between the 2 EOs (Wichmann 2005).

General Comments: A small amount of Microstegium vimineum found in the seep and only a few stems of Lonicera japonica were observed. Threat: Low / Scope: Low / Immediacy: Low (Bloom 2016).

DESCRIPTION

General Description Moist, moderately steep slopes adjacent to Long Creek and an intermittent drainage area that drains into Long Creek. Canopy dominated by Quercus alba and Liriodendron tulipifera with other oak, hickory, and hardwood species also present in the canopy, subcanopy, and shrub layers. Habitat quality is good, although these two stream bluff areas seem small and fairly isolated within the surrounding landfill property. (Tuttle 2016).
Mesic Mixed Hardwood Forest. with Fagus grandifolia, Ilex opaca, Prunus serotina, Vaccinium spp., Polystichum acrostichoides, Tipularia discolor, Cornus florida, Vitus spp, Smilax spp, Carpinus caroliniana, Lonicera japonica, Pinus taeda, Mitchella repens, Chimaphila masculata, Juniperus virginiana, Acer rubrum, Quercus rubra, Lyquidambar

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 643

EO Number 28 **Parent EO Number** 216

styraciflua, Liriodendron tulipifera, Pinus virginiana, Quercus alba (Huysman 1996). The slope above the creek contains a very diverse collection of spring ephemerals (Newberry 1996).

Min. Elevation 780 **feet** **Max. Elevation** 820 **feet**

EO Observed Area 4.29 **acres**

Rep Accuracy High

Separation Comments All sub EOs area located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details. The landfill isolates this site from possible unknown populations and habitat found upstream along Buffalo Creek as well as possible sites and habitats upstream along Long Creek (Padgett 2005).

General Comments: Invasive species present include Microstegium vimineum, Pueraria lobata, and Ligustrum sinense. These are not abundant on the bluff areas or where H. naniflora occurs, but they are abundant or dominant in areas adjacent to the species' habitat or elsewhere on the landfill property. Area of suitable habitat may include the larger area mapped previously for this EO. This survey confirmed the northern streamside boundary of the population and suitable habitat; at this northern streamside boundary is a small, grassy roadcut to the stream, and Microstegium vimineum overwhelmingly dominates the herbaceous layer in the forest north of this roadcut. (Tuttle 2016)

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes
Local government	CLEVELAND COUNTY	

Owner Comments Contact at the Cleveland County Landfill is Sam Lockridge, 704-447-8204. (Tuttle 2016).

Management Comments Recommendation of border species by G. Newberry should be considered (Padgett 2005). --G. Newberry recommends planting a protective border of trees such as locust, pine, or red maple on the upslope edge adjacent to the landfill to protect the slope from runoff and edge species such as Lonicera or kudzu.

Protection Comments The area has been designated as Special Protected Environmental Area by Cleveland County.

Additional Topics Geology : CZbg - Biotite gneiss and schist- Inequigranular, locally abundant potassic feldspar and garnet; interlayered and gradational with calc-silicate rock, sillimanite-mica schist, mica schist, and amphibolite. Contains small masses of granitic rock

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2016-05-24
EO Rank Comment
EO Data **2016:** Bloom counted 1472 plants in 1.79 acres of monitoring plots on 24 May 2016, and estimated 50,000+ plants occuring in the entire 62 acres of mapped area (Bloom 2016).
2014: Padgett counted 1718 plants within monitoring plots on 25 June 2014 and estimated 58,000+ plants covering 65 acres of mapped area (Padgett 2014).
2013: Padgett and Israel counted 1715 within monitoring plots on 18 July 2013 and estimated 17,000+ plants covering 18-acre population area, and 61,000+ plants for 65-acre mapped area (Padgett 2013).
2012: 1015 plants counted in 1.8-acre sample plot in 2012. Estimate of 10,150 plants for 18-acre population area. (Padgett 2012).
2006: Population apparently doing very well (plants not counted) on 28 April 2006, observed by Franklin and Moye (Franklin 2006).
2005: An approximate total of 98,789 individuals were calculated, at 6 sub-populations, using 1/100 acre sampling plots. Plants at site 8 were directly counted. Surveys made in October and November 2004; confirmation of species made in April 2005 by Matthews (HDR 2005, Bassette 2009) [this is likely an over-estimate resulting from a calculation of density per acre (Wichmann and Padgett 2005)].
2002: 800-1200 plants in flower on 5-8-2002 (Padgett 2002).
1995: More than 1000 plants counted on lower to upper slopes in an area 1-2 miles long (Savidge 1996).

DESCRIPTION

General Description Population intermixed with Hexastylis heterophylla (Franklin 2006). Mixed pine and hardwood forest, associated species include: American beech, sourwood, umbrella magnolia, American holly, white pine, white oak, Christmas fern, grape, honeysuckle, cranefly orchid, smilax, mountain laurel, hemlock (Tsuga canadensis), partridge berry, galax, yellow poplar, red maple, dogwood, black oak, black cherry, mockernut hickory, strawberry bush, rattlesnake plantain (Goodyera repens), scarlet oak (Q. coccinea), persimmon (Diospyros virginiana), northern red oak, sassafras, mountain silverbell (Halesia carolina), chestnut oak, Virginia pine, black gum (Nyssa sylvatica), red cedar, and shortleaf pine, rhododendron, fringe tree (Chionanthus virginicus), strawberry bush, horse sugar (Symplocos tinctoria), and buffalo nut (Pyrularia pubera), ground pine (Lycopodium obscurum), running-pine, skullcap (Scutellaria spp.), broomsedge (Andropogon virginicus), devil's bit, and trailing arbutus (Epigaea repens) (HDR 2005). --Forest and large cutover areas with Kalmia latifolia, Galax aphylla, Chimaphila maculata, Quercus alba, Pinus strobus, Oxydendron arboreum.

Min. Elevation 1,040 **feet** **Max. Elevation** 1,200 **feet**

EO Observed Area 49.00 **acres**

Rep Accuracy High

Separation Comments Principal EO 178 is approximately 1.5 air kilometers from principal EO 029, however the occurrences are separated by unsuitable habitat (ridge and town) greater than 1 kilometer wide and are therefore considered independent principal EOs (Wichmann and Franklin 2005).

General Comments: Identification confirmed by Gillian Newberry (USC-Spartanburg)

EO Rank Comment
EO Data **2013:** 4719 plants counted in 6.6 acres on 5 June 2013 (Stafford 2013).
2011: A total of 5032 plants were counted over 6.6 acres on 3 November and 12-13 December 2011; 3425 in 4.24 acres north of Tate Blvd and 1607 in 2.36 acres south of Tate Blvd (Gregory 2011)
2001: Field review by NCDOT on October 2001: population along the south side of Tate Boulevard intact and may have slightly expanded outside of the originally delineated boundaries, populations along the north side of Tate Boulevard appeared to have been slightly impacted along the parking lot of a newly constructed building. Few DFHL [Hexastylis naniflora] existed along the north side of Tate Boulevard before the building was constructed (Bassette 2003).
1996: Between 50 and 500 plants present. Identification verified by G. Newberry (Savidge & Bain 1996).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 14501

EO Number 30 **Parent EO Number** 179

DESCRIPTION

General Description High quality Dry-Mesic Oak-Hickory Forest occurring both north and south of Tate Boulevard. The canopy is dominated by Quercus alba, Q. rubra, Carya glabra, Acer ruburm, Liriodendron tulipifera, and Fagus grandifolia. The understory consists of Carpinus caroliniana, Oxydendron arboreum, Acer rubrum, Cornus florida, Ilex opaca. The shrub layer includes Rhododendron sp., Rubus sp., and Euonymus americanus. Woody vines inlcude Vitis rotundifolia, Smilax sp., and Toxicodendron radicans. The herb layer is sparse to modeately dense and includes Hexastylis naniflora, Goodyera pubescens, Polystichum acrostichoides, and Mitchella repens. (Stafford 2013).
North facing slope, plants located about mid-slope grading to small creek draining to Miller Branch. Associated species inlcude Kalmia latifolia, Goodyera pubescens, Chimaphila maculata, Quercus alba, and Pinus strobus.

Min. Elevation 940 **feet** **Max. Elevation** 1,000 **feet**

EO Observed Area **acres**

Rep Accuracy High

Separation Comments All sub EOs area located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: The following invasive species were noted as low threast: Lonicera japonica, Ligustrum sinense, and Albizia julibrissin. Hedera helix was noted as a moderate threat. (Stafford 2013)

Management Comments

Protection Comments

Additional Topics NCDOT implemented avoidance/minimization for U-2414A and reduced the road from four-lane divided to five lanes, which resulted in the construction limits remaining outside of the forested areas where H. naniflora was known to exist (NCDOT 2014).
"U-2307 (EO 179 [sub EO 30]) was expected to have significant impacts on a large population of *H. naniflora* in Catawba County. It was expected that a population of 10,700 plants would be lessened by 5,400 as a direct result of the realignment of multi-lane road. Project construction is ongoing and records for this population are insufficient for field verification at this time. While this population loss was mitigated by the purchase of 25 acres at Murray's Mill, it is recommended that a follow-up survey is conducted at the project location to determine actual impacts after construction is completed" (HDR personnel, 2005).
"U-2414A .. may affect all or portions of...[EO 030]...Results of the NCDOT's October 2001 field review revealed that the DFHL [Hexastylis naniflora] population along the south side of Tate Boulevard is intact and may have slightly expanded outside of the originally delineated boundaries. However, DFHL [Hexastylis naniflora] populations along the north side of Tate Boulevard appeared to have been slightly impacted along the parking lot of a newly constructed Home Builders Association building. Note that few DFHL [Hexastylis naniflora] existed along the north side of Tate Boulevard before the building was constructed" (Bassette 2003).

SURVEY INFORMATION

EO Rank C? - Possibly fair estimated viability **EO Rank Date** 2001-10
EO Rank Comment EO rank is based on EO Rank Specs for this species and available EO data (Wichmann 2005).
EO Data 2010: 1202 total plants counted on 20 and 21 December 2010: 423 plants counted at the 15th avenue site, 522 plants at the 1.54 acres SW1 site, and 25 plants at the 0.05 acre NW site on 20 December. 232 plants counted on 21 December at the 0.37 acre SW2 site (M. Haney 2015).
2001: A total of 10,700 plants were located in the construction project area (DOT TIP: U-2307C) in 2001; 5,400 were expected to be impacted by improvement activities. Verification of the current situation is needed, including the number of plants protected on-site (Wells 2006).
2005: NCDOT construction nearby, impacts needs to be determined (HDR personnel 2005).
2003: Small fragments of the original population on a steep hill near [NCDOT] project and along project's right-of-way limits, these fragments are unlikely to be impacted from future development due to their loction (Bassette 2003).
2001: A large number of plants seen when visited in 2001 (Padgett 2001).
1996: Over 1000 plants (Savidge 1996).

DESCRIPTION

General Description SW1, SW2, and NW sites consists of medium quality Mesic Mixed Hardwood Forest (Piedmont subtype). Associated species include Platanus occidentalis, Quercus rubra, Quercus falcata, Quercus coccinea, Liriodendron tulipifera, Liquidambar styraciflua, Acer rubrum, Botrychium virginianum, Tipularia discolor, Asplenium platyneuron, Polystichum acrostichoides, Oxydendrum arboretum, Carya tomentosa, Prunus serotina, Pinus strobus, Pinus virginiana, Smilax sp., Cornus florida, Toxicodendron radicans, Nyssa sylvatica, Fagus grandifolia, Rubus sp., Quercus alba, Euonymus americanus, Quercus stellata, Vitis rotundifolia, Arundinaria gigantean, Juniperus virginiana, Lycopodium digitatum, Chimaphila maculata and Ilex opaca (Haney 2015).

15th Ave site consists of medium quality Mesic Mixed Hardwood Forest (Piedmont subtype) which includes Kalmia latifolia, Fagus grandifolia, Cornus florida, Quercus rubra, Juniperus virginiana, Carpinus caroliniana, Carya tomentosa, Ilex opaca, Oxydendrum arboreum, Polystichum acrostichoides, Asplenium platyneuron, Quercus alba, Pinus virginiana, Tipularia discolor, Smilax sp., Euonymus americanus, Liquidambar styraciflua, Liriodendron tulipifera, Quercus coccinea, Acer rubrum, Quercus falcata, Nyssa sylvatica, Prunus serotina, Chimaphila maculata, Goodyera pubescens and Pinus strobus (Haney 2015). Steep hill and along right-of-way (Bassette 2003).

Min. Elevation 940 **feet** **Max. Elevation** 970 **feet**

EO Observed Area **acres**

Rep Accuracy Medium **Separation Comments** More than 2.0 Kilometers southwest of EO 277 and separated by a major highway and no suitable habitat (Robinson 2015).

General Comments: Medium threat noted from Lonicera japonica at SW2. Moderately low risk from Lonicera japonica and Ligustrum sinense at SW1 and NW sites. Low degree of threat from Rosa multiflora, Ligustrum sinense, and Lonicera japonica at the 15th avenue site. (Haney 2015)

SURVEY INFORMATION

EO Rank D - Poor estimated viability **EO Rank Date** 2011-03-03
EO Rank Comment EO rank is based on EO Rank Specs for this species; downgraded from an AB to a D based on EO data from Spring 2005 (Wichmann 2005).
EO Data 2013: 234 plants counted in 2.3 acres on 6 June 2013 (Stafford for NCDOT 2013).
2011: 60 observed by NCDOT on 03 March 2011 in their ROW; the remainder of the occurrence [number of plants not reported] was noted to be outside of the ROW (NCDOT 2014).
2007: 42 plants observed by NCDOT on 22 March 2007 in the right-of-way. Overpass construction removed some trees, altering the habitat (NCDOT 2009).
2005: More than 1,000 plants are within construction project area (DOT TIP: U-2528AA); 619 plants are expected to be impacted by construction activites in 2005. However, 250 plants were reported to be protected on-site, but only 1 plant was found during 2005. Verification of the situation is needed, including the number of plants protected on-site (Wells 2006). 1 plant found during field checks, 250 plant are thought to be preserved in additonal ROW purchased at this site (HDR personnel 2005).
2003: Impacted by NCDOT project U-23907C and/or private landowner, portion of EO still present, portion of EO are gone (Bassette 2003).
1995: Over 1000 plants observed by Savidge on 21 March 1995 (SAVIDGE 1996).

Additional Topics This project was subject to consultation with USFWS (ASNC log no. 4-2-95-102), and a Biological Opinion was written in 1995 for impacts relating to NCDOT's road work. The ammended BO anticipated direct impacts to 619 plants, but the Service anticipated that the site would ultimately be lost through indirect impacts. Murray's Mill was purchased as off-site mitigation. [C.Wells, 8/2006]. "U-2528AA (EO 32) involves a new highway interchange where impacts to approximately 619 plants were anticipated. A portion of the mitigation was provided for this site through the Murray's Mill purchase and conservation of 25 acres of a *H. naniflora* population. During the recent field visit, it was discovered that much of the surrounding habitat had been disturbed through logging operations and/or project impacts. While only one plant was found during field checks, 250 plants are thought to be preserved in additional ROW purchased at this site" (HDR personnel 2005). "U-252AA...Construction completed June 2003.. may have affected all or portions of [EO] 032...Results of the October 2001 survey indicate that the only DFHL impacts on this project occurred as a result of direct construction activities...indirect impacts were not observed, it is anticipated that such impacts could eventually occur from development along the interchange. Based on October 24, 2002 conversation with Trish Simon, the plants in Quad D (SE quadrant) are still present and a protective fence has been placed around them. NCDOT did not disturb Quad A (NE quadrant) according to road project's permits and plans, but the property owner has since cleared the area for future development. The plants in Quadrant A (NE quad) are now gone. Quad B (NW quadrant) was already stressed before construction was started due to logging and these plants are gone. The population on other side of the original on-ramp had been cleared by the landowner for future development" (Bassette 2003).

DESCRIPTION

General Description The population in the southern portion of the facility is in degraded habitat adjacent to an existing landfill and old roadbed.
Min. Elevation 1,000 **feet** **Max. Elevation** 1,160 **feet**
EO Observed Area **acres**
Rep Accuracy Medium **Separation Comments** EO is not located within 2.0 kilometers of another known EO of the same species (Wichmann 2005).
General Comments: Burke County proposed a construction and demolition landfill expansion at the John's River Waste Management Facility in 2010; it is not known whether this would impact the rare plant population (Mitchell pers. comm. 2010).

First Broad River: West Shelby Mesic Slope (This is a sub EO of EO 093).

Directions First Broad River: West Shelby Mesic Slope: This is a sub EO of parent EO 093 (Wichmann 2005). East of the First Broad River at the end of Lackey Street in Shelby and 0.3 mile west of Westview Church (Oakley 2002).

SURVEY INFORMATION

EO Rank D - Poor estimated viability **EO Rank Date** 2005-05-19

EO Rank Comment

EO Data Approximately 60 clumps counted, probably more; less than 50% flowering. Plants are scattered throughout SNHA on north-facing slope (Franklin et al. 2005). Only 50 plants or so seen on 30 July in leaf in partial survey of areas within 0.35 mile of Westview Church (Oakley 2002). Vigorous population consisting of many large clumps at the base of trees and younger plants on the slope face 4 June (Newberry & Huysmasn 1997).

DESCRIPTION

General Description Mesic, northeast-facing slope, steep enough to remove leaf litter with rainfall; Closed canopy of Fagus grandiflora and Quercus alba; generally open understory of Cornus florida, Oxydendrum arboreum, and Ilex opaca; shrub layer of Hamamelis virginiana, Rhododendron sp. (deciduous), Calycanthus floridus, Ilex sp. (deciduous), Acer negundo, and Euonymus americanus; herbaceuous layer of Vaccinium pallidum, Carex ssp., Tiarella cordifolia, Maianthemum racemosum, Polystichum acrostichoides, Luzula af. acuminata, and Cimicifuga americana (Franklin et al. 2005). Mature wooded north-facing slope, with more disturbed forests to the east, in a rapidly urbanizing area (Oakley 2002).

Min. Elevation 720 **feet** **Max. Elevation** 760 **feet**

EO Observed Area **acres**

Rep Accuracy High

Separation Comments All sub EOs area located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 13728

EO Number 34 **Parent EO Number** 93

General Comments: Plants are on south side of an intermittent tributary of the broad river, areas on north side of the tributary recently cleared for development (Oakley 2002).

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes
Private individual	David and Don Brown	

Owner Comments David Brown is the Forester at Dupont State Forest (Franklin et al. 2005).

Management Comments

Protection Comments G. Newberry recommends an environmental easement here to serve as mitigation for impacts at EOR#036 (1997).

Directions Broad River: unnamed tributary south of the Broad River and east of Hunter Road. This is a sub EO of 099 (Wichmann 2005). 0.5 mile south of the Broad River, between road cut and back of trailer on the east side of Hunter Road (SR 1124).

SURVEY INFORMATION

EO Rank C - Fair estimated viability **EO Rank Date** 2015-05-19

EO Rank Comment EO rank based on EO rank specs for this species (Wichmann 2005).

EO Data This suboccurrence is included in the determination of total extrapolated acreage for USFWS Flex Fund Monitoring Site 2, although it was not surveyed.
2015: Padgett and Feldman counted 3011 plants on 19 May 2015 in 2.29 acres of monitoring plots in sub EOs 37, 55, and 76. Estimated 32,000 total plants covering the entire 24.61 acres of EO 99 (Padgett and Feldman 2015).
2005: Site visited and remapped. Counts estimates for the site have the population at around 230-250 plants (Padgett). Estimated between 100-150 plants seen on April 12, 2005 (Padgett 2005).
1996: 150 plants estimated by Newberry in 1995 or 1996 [year not reported] (Newberry 1996).
1994: About 150 plants seen in June 1994 (Newberry 1994).

DESCRIPTION

General Description Dry-Mesic Oak-Hickory Forest community located on a gently sloping porton of a small unnamed stream near pastures. Dominate canopy speices include Quercus alba, Quercis coccinea, Quercis falcata, Loiriodendron tulipifera. The understory is comprised of Cornus flordia, Oxydendrum arboreum, and Acer rubrum. Shrubs include Kalmia latifolia, Euoynmous americanus, Vaccinium arboreum and Vaccinium pallidum. Vines such as Vitis rotundifolia, Toxicodendron radicans Lonicera japonica, and Smilax glauca are present. Herbs include Hexastylis naniflora, Goodyeara pubescens, Elephantopus tomentosa, Chimaphila maculata, and Mitchella repens (Padgett 2005). Laurel thicket above small stream in Broad River drainage (Newberry 1994).

Min. Elevation 754 **feet** **Max. Elevation** 771 **feet**

DESCRIPTION

General Description In seepage areas with Sphagnum (Newberry 1996).
Min. Elevation 940 **feet** **Max. Elevation** 960 **feet**
EO Observed Area **acres**
Rep Accuracy Medium **Separation Comments** Located within 2.0 kilometers of sub EOs 039 and 184 and not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: In Newberry (1996), she reports the location as "Claremont Street"; I think this is an error it should be Clarence Street in the town of Claremont because Newberry indicates the property owner, Mr. Deal, lives at "4344 Clarence Street, Claremont, NC" and there is no Claremont Street in this whole area - not near where Newberry has it mapped nor where NHP has it mapped. Also, 4344 Clarence Steet does not exist; however, a Sylvia Deal has owned 4355 Clarence St. since 1993, but this is not near where Newberry has her occurrence mapped on the topo in the report, nor is it southwest of Shiloh as Newberry indicates in the location. It is west of Murray's Mill Pond though, consistant with part of Newberry's discription. 1993 and 1998 aerials do not indicate habitat where Newberry has this occurrence. Did not change NHP mapping to match where Newberry indicates the occurrece on her topo; occurrence remains mapped to Clarence Street (Mason 2009).

Data Sensitive Element N **Comments**

Monitoring Needs Comments

Research Needs Comments J.E Padgett 2001, Site visited for collection of flower and leaf materials for research.

Research Needs Comments

Additional Inventory Needed Y **Comments** This population may extend both above and below the original survey area (Padgett 2005).

DESCRIPTION

General Description Dry-Mesic Oak--Hickory Forest with a thick Kalmia understory along a moderately steep slope and streambed. The dominant canopy species include Quercus alba, Quercus coccinea, Liriodendron tulipifera, Acer rubrum, Fagus grandiflolia. Other associated species include Oxydendrum arboreum, Cornus florida, Polystichium acrostichoides, Chimaphilia maculata, and Goodyera repens (Padgett 2005).

Min. Elevation 705 **feet** **Max. Elevation** 840 **feet**

EO Observed Area 31.00 **acres**

Rep Accuracy Medium

Separation Comments All sub EOs area located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

SURVEY INFORMATION

EO Rank AB - Excellent or good estimated viability **EO Rank Date** 2011
EO Rank Comment EO rank was changed from an A to a AB based EO rank specs for this species and 2011 data, more data on lansdcape context of this EO is needed to better rank this EO.

EO Data **2015:** Present and observed by Bassette to be in two patches, east of US-321, in 2015 [based on features in shapefile]; no additional information (Bassette NCDOT 2015).**2012:** 617 plants counted by Dustin and NCDOT staff in the spring of 2012 at sites 38, 39, 43, and 44; all sites determined to be 100% H. naniflora (NCSOT 2018).**2011:** 1,235 clusters counted on 02 May 2011 by Frazer, Bassett, Burroughs and Gray within entire NCDOT mitigation site in 2011 (NCDOT 2014).**2009:** 399 individuals counted by Dustin on 21 September and 22 September 2009 at sites 38, 39, and 44; all sites subsequently determined to be 100% H. naniflora (NCDOT 2018).**2005:** 4,262 plants are within construction project area (TIP: B-2937); 324 plants are expected to be impacted by construction activities in 2005; 4,262 plants are to be protected on-site in a 2.7 acre area (Wells 2006). Approximately 4,262 plants were found [extrapolated from sampling 15 circular plots, 1/100 acre in size]; in addition, more than 60 plants were observed north of the old road alignment near the banks of Little Gunpowder Creek outside of NCDOT's property (2005-05);**2000:** 1,836 plants estimated by NCDOT staff prior [2000?] to any impacts [from bridge replacement] occurring; 175 plants transplanted to an approximate 2.7 acre permanent conservation easement adjacent to site in November 2000; after three years, Padgett estimates that 68% survived (HDR and HARP personnel 2005).**2000-2003:** This is an excellent viable population with over 500 plants located in this easement. This site has one of the only transplanted populations in North Carolina where 175 plants were transplanted from areas to be impacted by bridge replacement before the bridge was replaced (Padgett 2005).**2002:** 68% of the transplanted individuals survived as of April 2002, despite drought conditions (Murrell in NCDOT 2009).**2000:** In November 2000, 175 individuals were relocated from the right of way of a NCDOT bridge construction site at Little Gunpowder Creek to an adjacent conservation easement (NCDOT 2009).**1998:** Between 501 and 1000 plants in a 10-100 square-meter area, densely spaced; in flower on 18 May 1998 (Savidge 1998).

Survey Type Qualitative ground survey

Survey Date 2015 **First Observation Date** 1998-05-18 **Last Observation Date** 2015

Data Sensitive Element N **Comments**

Monitoring Needs Comments This site should be visited and the transplant area monitored. The transplants are all flagged (Padgett 2005). NCDOT work at this site was subject to consultation with USFWS (ASNC log no. 4-2-98-147), and the Biological Opinion anticipated impacts to 324 plants, which would be minimized through transplant. NCDOT also commited to 5 years of monitoring at this site in their Biological Assessment [C. Wells, 8/2006].

Research Needs Comments Live plants at Appalachian State University Greenhouse. Plants were collected during the transplant in November of 2000 (Padgett 2005).

Research Needs Comments

Additional Inventory Needed Y **Comments** Only study area of NCDOT TIP No. U-4700 surveyed; more plants may exist outside of this area (NCDOT 2018). More information is needed about the landscape context of this EO to better rank this occurrence (Wichmann 2005).

DESCRIPTION

General Description North-facing slope over Gunpowder Creek with mesic mixed forest. associates include Kalmia latifolia. (Savidge 1998).Site 38: Wooded areas with the study area are fragmented by heavy human alteration and are best described as Mesic mixed Hardwood Forests, occurring on Cecil sandy loam soils. Associated species: Ilex opaca, Smilax rotundifolia, Acer rubrum, Pinus strobus, Liriodendron tulipifera, Lonicera japonica (NCDOT 2018).Site 39: Wooded areas with the study area are fragmented by heavy human alteration and are best described as Mesic mixed Hardwood Forests, occurring on Pacolet fine sandy loam soils. Associated species: : Ilex opaca, Hexastylis arifolia Prunus serotina, Liquidambar styraciflua, Cornus florida, Smilax rotundifolia, Carya spp., Vitis rotundifolia, Acer rubrum, Oxydendrum arboreum, Pinus virginiana, Quercus alba, Pinus strobus, Liriodendron tulipifera, Tipularia discolor, Xanthorhiza simplicissima, Ligustrum sinense (NCDOT 2018).Site 43: Wooded areas with the study area are fragmented by heavy human alteration and are best described as Mesic mixed Hardwood Forests, occurring on Pacolet fine sandy loam soils.

Private individual	private	

Owner Comments

Management Comments

Protection Comments This site is part of an NCDOT mitigation easement located between the new bridge and US Highway 321 (Padgett 2005). Bridge replacement may impact site (Savage 1998).

Additional Topics Sites 38, 39, 43, and 44 are within project study area of NCDOT TIP No. U-4700 (NCDOT 2018). "B-2937 (EO 44) is a bridge replacement and road realignment that was completed in 2003. The population was estimated at 1,846 plants by NCDOT staff prior to any impacts occurring. According to James Padgett (via email communication), 175 plants were transplanted from the construction area into an approximate 2.7-acre permanent conservation easement adjacent to the site in November 2000. After three years of monitoring by Padgett, 68% had survived (Padgett, 2004). In May 2005, HDR/HARP visited this site and sampled fifteen 1/100 acre plots. There were approximately 4,262 total H. naniflora plants found on this site yielding a density of 1,567 per acre. In addition, more than 60 plants were observed north of the old road alignment near the banks of Little Gunpowder Creek outside of NCDOT's property" (HDR personnel 2005). This site has one of the only transplanted populations in North Carolina where 175 plants were transplanted before the bridge was replaced; transplants are all flagged (Padgett 2005). Direct construction impacts related to [NCDOT Project] B-2937; 2.68 ac of additional right-of way purchased for a perpetual conservation easement which was expected to protect approximately 1,522 plants (based on species density with the impact area) (Bassette 2003).

Protection Comments This property is eligible as a Historic District on the National Register with much of the historic features still intact and is protected as a 4-F Property (1998).

Additional Topics "B-2816 (EO 46) is a bridge replacement project that was slightly realigned and determined not to impact the Hexastylis population. However, the recent field visit showed that the previously mapped portion of the population no longer existed, possibly due to adjacent landowner maintenance such as bush hogging. Additionally, a new trail was cut through the site where some plants were found, and possibly contributed to the population disturbance. It appeared as though effects from the 2004 hurricane season activity also played a role in the degradation of site integrity and quality. It is estimated that only 50 plants remain at this site, as opposed to the thousand or more that was previously documented by NCDOT and NCNHP in 1998 and 2001" (HDR and HARP personnel, 2005). "B-2816: Situated along SR 1908, the project replaces Bridge No. 230 over Buffalo Creek...this project may affect all of or portions of [EO 046]...environmental permits associated with B-2816 do not authorize any impacts to DFHL near the bridge. An alternative that avoided direct impact to the DFHL population was chosen. The October 2001 field review indicated that no direct, indirect, or cumulative impacts have occurred on the DFHL population locations near the project" (Bassette 2003). The bridge replacement project was moved and will not affect this occurrence (1998).

Broad River/Sandy Run Natural Areas: Mouth of Sandy Run Creek, NC DOT sites CC and DD (Sub EO of EO 100).
NCDOT TIP: R-2824
NCDOT TIP: R-2707 US 74 Shelby Bypass

Directions Broad River/Sandy Run Natural Areas: Mouth of Sandy Run Creek. This is a sub EO of Parent EO 100 (Wichmann 2005). 3 miles south of Boiling Springs on the east bank of Sandy Run near its confluence with the Broad River (Padgett 2001). Sub-occurrence 1: at the confluence. Sub-occurrence 2: ca. 0.25 mile northeast of the confluence, along an intermittent stream (Oakley 2001); James Padgett's 2001 Site M (Padgett Map); NC DOT Broad River Tract Site CC (Bassette 2003). Subpop 3: 0.1 mile north of the confluene; James Padgett's 2001 Site I (Padgett Map). NC DOT Broad River Tract/IP mitigation site DD (Bassette 2003).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2008-04

EO Rank Comment

EO Data

2012: 748 plants were counted at population CC and 44 plants were counted at population DD on 28 March by NCDOT biologists (Bassette).

2011: The smallest sub-population right along the creek was visited in May 2011 by Padgett, with no plants being located at this site which had previously had 5-10 plants (Padgett 2015).

2008: 538 plants total observed at sites 2 (CC) and 3 (DD) by NCDOT biologists in April 2008 (Bassette 2009).

2003: 667 observed plants over 1.6 acres (HDR 2003). 707 plants observed [estimated] by NC DOT (Bassette 2003).

2001: Subpop 1: Fewer than 200 clumps observed in a 600 by 600 foot area, with buds on 4 February (Padgett 2001); Subpop 2: Estimate of 200 plants in bud on 6 March in Dry-Mesic Hardwood Forest (Oakley 2001).

Survey Site
Broad River: Richardson Creek, tributary east of SR 1111 and north of Hayes Lake (Sub EO of EO 099).
USFWS Flex Fund Monitoring Site 2 (in part)

Directions Broad River: Richardson Creek, tributary east of SR 1111 and north of Hayes Lake. This is a sub EO of parent EO 099 (Wichmann 2005). Subpopulation 1[A] is east of Jack McKinney Road (SR 1111) About 0.9 mile north of the Broad River on two small springs which fork into a pond which drains into Richardson Creek (Padgett 2001). Subpopulation 2 [See EO 079] is off of SR 1115 south of Harris approximately 0.3 mile behind Riverside Church on north facing slope of unnamed tributary of Richardson Creek. Subpopulation 3 [B] Is 0.1 mile north of subpopulation 1 along a spring (Padgett 2002).

SURVEY INFORMATION

EO Rank AB - Excellent or good estimated viability **EO Rank Date** 2015-05-19

EO Rank Comment

EO Data **2015**: 3011 plants counted by Padgett and Feldman on 19 May 2015 in 2.29 acres of monitoring plots in sub EOs 37, 55, and 76. Estimated 32,000 total plants covering the entire 24.61 acres (Padgett and Feldman 2015).
2014: Padgett counted 3094 plants within monitoring plots for principal EO 99 on 19 and 20 May 2014 and estimated 33,300 plants covering 24.61 acres of mapped area (Padgett 2014).
2013: Monitoring Data is part monitoring data for Principle EO 99 (Padgett 2013). 1116 plants counted by Padgett and Israel on 7 May 2013 (Padgett 2013).
2012: 1309 plants were counted by Padgett and Israel on 16 July 2012 (Padgett 2012). Area impacted by logging in summer of 2005 (Padgett 2005).
2001: Subpopulation 3 [b]: more than 50 single leafs and clumps of leaves observed along 50-75 feet of spring; in bud on 2 february, seedlings present (Padgett 2002). Subpopulation 1[a]: 100-200 clumps plus single and double leaves occur along 200 feet of each springhead; not many young plants present; Subpopulation 2 [See EO 079]: 200-300 clumps along 100 yard of the stream; high flower numbers and seedling numbers especially in the cutover portion of the site; both populations have plants in leaf and flower on 1 April (Padgett 2001).

DESCRIPTION

General Description Subpopulation 3 [B]: Mixed Hardwood community on an upland flat along a moist to dry moisture regime, with moderately filtered to shady light conditions. Associated species found at the survey site include: Acer rubrum, Liriodendron tulipifera, Quercus alba, Viburnum spp., Cornus florida, and several ferns spp. (Padgett 2002). Subpopulation 1[A]: mesic hardwood community including Fagus grandifolia, Pinus virginica, Polystichum acrostichoides and Lonicera japonica. Area was cutover about 25 years ago. Subpopulation 2 [See EO 079]: Mesic hardwood cove community including Quercus alba, Sanguinaria canadensis, Polystichum acrostichoides, and Hepatica americana. Part of the area was cutover in the past 5 years (Padgett 2001).

Min. Elevation 215 **feet** **Max. Elevation** 220 **feet**

EO Observed Area **acres**

Rep Accuracy High

Separation Comments This EO is comprised of two sub-occurrences which are located east of SR 1111 and west of Richardson Creek; former subpopulation 3 of this EO is now sub EO 079 and is located east of Richardson Creek; EO 055 and EO 079 are sub EOs of principal EO 099; all sub EOs are located within 2.0 kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005).

General Comments:

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes
Private individual	William Lowe, P O Box 48, Harris 28074	2012 permission request, email response with permission granted
Corporation	Chapman Sod LLC	2012 permission request, did not respond. 2016, responded to phone call with permission.

Owner Comments Chapman Sod Farm Manager Jamie Spears 864-680-3509 (2016).

Management Comments Area impacted by logging in summer of 2005 (Padgett 2005). Evidence of off-road vhicle use damaging some of the habitat at subpopulation 1[A] (Padgett 2001).

Protection Comments

Additional Topics Landowner has logged parts of the tract where some of this EO is present. A 100 foot buffer was left along stream corridor where this EO occurs. Parts of the EO was impacted along slopes away from the stream on a north-facing slope that was logged. The plants persist after the logging in the impacted area. It is not known wheither the species can survive clear-cutting events in the long term. Known populations occurring in clearcuts seem to thrive after clearcutting for a short time, then decline rapidly (Padgett 2005).

Third Creek Rare Plant Site

Survey Site
Hunter Bridge Road
Third Creek Rare Plant Site

Directions South Yadkin River, Third Creek: Three locations in the vicinity of Third Creek, 1.5 miles east of Taylorsville: Site 1 occurs along Third Creek off Hunter Bridge Road (SR-1628) (Padgett); Site 2 occurs south along US Highway 64 along a predominantly south flowing unnamed tributary of Third Creek; and Site 3 occurs north along US Highway 64 along a predominantly south flowing unnamed tributary of Third Creek (Padgett 2010).

SURVEY INFORMATION

EO Rank C - Fair estimated viability **EO Rank Date** 2010-03-21

EO Rank Comment C-rank given due to its regional location (only known Yadkin River Basin site) within the known populations, as well as additional plants located within this site (Padgett 2010) -- This site might requre a higher site ranking. It is the only site in Alexander County and the only site in the Yadkin River Drainage to date (Padgett 2005). Sites 2 and 3 are CD ranked (Padgett 2010).

EO Data **2010:** Site 1: Additional survey work along unnamed north to south flowing tributary of Third Creek found plants in flower on 3/21/2010 on both the north and south sides of U. S. highway 64. There is an estimated 30-50 plants on the south side of the highway and 75-100 plants north of the highway (Padgett 2010).
2010: Site 2: 50-75 clumps found in hardwoods on wooded slopes along unnamed tributary of Third Creek. In flower on March 21, 2010 (Padgett 2010).
2010: Site 3: 50-75 clumps found in hardwoods on wooded slopes along unnamed tributary of Third Creek. In flower on 3-21-2010 (Padgett 2010).
2005: Site 1: 78 plants counted: 11 flowering, 5 vegetative, plant occur mostly on the slope, not much on ridge by creek (Franklin and Wichmann 2005).
2002: Site 1: 100-200 plants seen along small stream and along ridge on 10 October (Padgett 2002). 50-75 plants occurring along the ridge for 300 feet. flowering sparsely on 5 April (Padgett 2002).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 4708

EO Number 59

Monitoring Needs Comments J. E. Padgett conducted NCVS on site on 10-2-2002 (Padgett 2005).
Much of the occurrence located along US Highway 64 resides within the NCDOT road right-of-way (Padgett 2010).

Research Needs Comments J.E. Padgett (ASU) is doing PCR and RAPD DNA work with Hexastylis naniflora (2001).

Research Needs Comments

Additional Inventory Needed Y **Comments** Additional occurrences may exist within 2.2 km of this location along small streams with wooded north-facing slopes (Padgett 2010).

DESCRIPTION

General Description Mixed hardwoods over sandy loam soil to disturbed community with Ligustrum. Associated species include Quercus alba, Ligustrum, Thalictrum thalictroides, Ilex opaca, Hepatica americana. There is a fence going through the area and past disturbance may be due to past cattle presence (Padgett 2002).

Min. Elevation **feet** **Max. Elevation** 400 **feet**

EO Observed Area **acres**

Rep Accuracy High

Separation Comments All source features are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide.

General Comments: Parent EO 290 and Sub EOs 288 and 289 were merged into this single record as all were closer than 1 km to one another (Amoroso 2015).

Broad River: Unnamed tributary at SR 1115 & 1116 (This is a sub EO of 099).

Directions Broad River: unnamed tributary at SR 1115 and 1116. This is a sub EO of parent EO 099 (Wichmann 2005). East of Spicer Rd. (SR 1115), Along a tributary 0.3 mile north of the Broad River, 0.6 mile south of the intersection of SR 1115 and SR 1116. This site is along a stream that leads to a substation recently placed in by the Riverstone Development Group.

SURVEY INFORMATION

EO Rank B - Good estimated viability **EO Rank Date** 2002-02-03

EO Rank Comment EO rank based on EO rank specs for this species and most recent EO data (Wichmann 2005). Rank lowered [to a BC] due to habitat quality; although many plants, the population is within a pine plantation however there are several small streams which are buffered by hardwoods.

EO Data **2002:** Estimated between 750-1000 single leaves or multiple leaf clumps, in bud on 3 February (Padgett 2002).

SURVEY INFORMATION

EO Rank BC - Good or fair estimated viability **EO Rank Date** 2005-05-05
EO Rank Comment Rank was upgraded from a C to a BC based on rank specifications for the species; BC was chosen to reflect large (greater than 1 acre), high quality (SNHA) forest in which this EO occurs and to account for the fact that the number of clumps listed in EO data was estimated (Wichmann 2005). BASED ON RANK SPECIFICATIONS DETERMINED WITH USFWS.
EO Data 300 plants estimated by Padgett, 86 clumps over a small area counted by Franklin of which approximately 10% were flowering on 05 May 2005 (Padgett, Franklin and Wichmann 2005). S. Oakley estimted 300 plants in leaf and flower on 17 May 2002 (Oakley 2002).

Source Feature Locator Knob Creek natural area
Source Feature Descriptor 2005-05-05, Franklin, Padgett, Wichmann

Surveyors Shawn Oakley, NCNHP
James Padgett, NCNHP
Misty Franklin, NCNHP
Brenda Wichmann, NCNHP

Survey Type Qualitative ground survey

Survey Date 2005-05-05 **First Observation Date** 2002-05-17 **Last Observation Date** 2005-05-05
Data Sensitive Element N **Comments**
Monitoring Needs Comments
Research Needs Comments
Research Needs Comments
Additional Inventory Needed Y **Comments** Northern most portion of slope not fully explored; plants likely extend along length of the slope (Wichmann 2005).

DESCRIPTION

General Description The northern sub-population (on the west facing slope east of the sharp bend in the river) is in a more mature forest, with many large trees, including a sourwood > 18" dbh. Young to mature mesic hardwoods on moderate northwest facing slope with Liriodendron, Fagus, Acer rubrum, Halesia tetraptera, Polystichum acrostichoides, MItchella repens Maianthemum recemosum, Polygonatum biflorum, and others (Oakley 2002).
Min. Elevation 820 **feet** **Max. Elevation** 860 **feet**
EO Observed Area **acres**

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 3284

EO Number 71

Rep Accuracy High **Separation Comments** EO is not located within 2.0 kilometers of another known EO of the same species (Wichmann 2005).

General Comments: Identification confirmed; calyx tube openings measured 4-5 mm in the intact community and 6-7mm in the clearcut area (Franklin, Padgett, and Wichmann 2005). OCCURRENCE IN NEED OF VERIFICATION, CALYX TUBE OPENING EXCEEDS 5mm IN WIDTH (OAKLEY 2002).

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes
Private individual	NOAH & MAZE WRIGHT	
Private individual	Don Dedmond	527 Belwood-Lawndale Rd; (704) 300-6968

Owner Comments Don Dedmond granted permission for NCNHP to visit and visited the site with Franklin, Padgett, and Wichmann on 5 May 2005.

Management Comments

Protection Comments During a site visit with one of the landowners, Don Dedmond, in 2005, Franklin and Padgett asked Mr. Dedmond if he thought about formally protecting the site. He indicated that he did not plan to develop the site and that he was interested in conservation, but that he was not interested in formal conservation agreements or in selling the land (Franklin 2005). Mr. Dedford owns the portion of the site that was not recently clearcut.

Broad River/Sandy Run Natural Areas

Survey Site
Broad River/Sandy Run Natural Areas: Middle Sandy Run Crk, E side of Crk extending N from Grog Creek (Sub EO of EO 100).
NCDOT Broad River Mitigation Tract
NCDOT TIP: R-2707 US 74 Shelby Bypass

Directions Broad River/Sandy Run Natural Areas: Middle Sandy Run Creek, east side of creek extending north from its confluence with Grog Creek. This is a sub EO of principal EO 100 (Wichmann 2005). NC DOT Broad River Tract sites L and M; James Padgett's 2001 Site 9C (Wichmann 2005). Slopes and ravines along the east side of Sandy Run Creek beginning approximately 200 meters north of its confluence with Grog Creek and continuing north along the creek for approximately 1.2 Kilometers (Wichmann 2005, based on map). NC DOT Mitigation site [in part] primarily for R-2707, also known as the IP or Broad River Tract (HDR 2005). Broad River/Sandy Run Natural Areas (Sandy Run Bluff North Subsite): Located 1.8 air miles southwest of Boiling SpringS, NC on the east side of SandY Run north of its confluence with Grog Creek (Oakley 2002).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2012-03-15

EO Rank Comment EO rank changed from a B to an A based on EO rank specs for written for this species (Wichmann 2005). Based on rank specifications determined with USFWS.

EO Data 2012: 11,446 total plants: 3550 plants estimated at site L1, 1923 plants estimated at site L2, and 3302 plants estimated at Site II by NCDOT biologists on 10 April 2012. 2671 plants counted at site M by NCDOT biologists on 10-11 April 2012 (Bassette 2015).
2012: Site visited with USFWS, NCDOT , and ASU 15 March 2012 (Padgett 2012) -- Wagner et. al. observed over 1000 plants on 15 March 2012. Plants growing on top of rocks in very shallow soil (Wagner 2012).
2009: Plants observed by Jones in January, April, and June 2009; no count made (Jones 2009).
2009: An additional 3,349 plants counted at site II of Broad River Tract on 20 and 21 April 2009 by NCDOT biologists (Bassette 2009). 3,920 observed by NC DOT personnel (Bassette 2003).
2001:Over 2000 estimated plants along steep north and northwest-facing slopes (Padgett 2001).Vigorous population estimated at 500-1000 plants in leaf and bud on 6 March (Oakley 2001).

Broad River: Big Horse Creek, Parris Tract (north) (Sub EO of EO 099).
USFWS Flex Fund Monitoring Site 2 (in part)

Directions Broad River: Big Horse Creek, Parris Tract (north). This is a sub EO of parent EO 099 (Wichmann 2005). Along unnamed tributaries to Big Horse Creek. The primary occurrence (A) occurs on the east [and west] side of US Highway 221 approximately 1.2 miles south of the Broad River along an unammed tributary to Big Horse Creek, approximately 2000' south of the intersection of US 221 and SR 1113 (Hick's Crossroad); east and west of US 221 (Renninger 2003).

SURVEY INFORMATION

EO Rank BC - Good or fair estimated viability **EO Rank Date** 2015-05-19

EO Rank Comment EO rank based on EO rank specs for this species and most recent EO data (Wichmann 2005).

EO Data **2015**: 3011 plants counted on 19 May 2015 in 2.29 acres of monitoring plots in sub EOs 37, 55, and 76. Estimated 32,000 total plants covering the entire 24.61 acres (Padgett and Feldman 2015).**2014**: Padgett counted 3094 plants within monitoring plots for principal EO 99 on 19 and 20 May 2014 and estimated 33,300 plants covering 24.61 acres of mapped area (Padgett 2014). **2013**: Site visited and population delineated on 14 June 2012 by Padgett and Gadd (Padgett 2013).**2012**: Wagner et. al. counted about 35 plants on 12 March 2012. Most plants on site budding but not yet in full bloom. Plants close to creek bed heavily impacted by siltation from 221 widening project. Plants up slope not as heavily impacted. Last count of plants before highway construction was 130 plants. (Wagner 2012).**2010**: 4 plants moved from the area to be impacted by the road project to the transplant area at the Tate conservation easement (EO 286) on 27 January 2010 by NCDOT biologists (Fontaine 2010 - docmentation with EO 286).**2007**: 135 clumps counted and observed in March and April 2005 by H W Hochner (Padgett 2007).**2004**: A: (primary site) 200-300 rosettes occurring on both north and south sides of the drainage (the majority of the population is on the north side). The population covers approximately 4100 SQM. Approximately one half of the individuals seen were flowering. B [see EO 172]:(secondary site) 9 rosettes occurring on south side of the drainage. The population covers approximately 100 SQM. 5 rosettes were flowering (M. Franklin and J. Padgett 2004).**2003**: A: Approximately 20 clumps (10 on each side of US 221), in leaf and flower; seedlings and vegatative evidence of reproduction; a few plants seen on south-facing bank (Renninger 2003). B[see EO 172]: Approxitately 75-100 clumps in 0.232 acres, in leaf and flower; seedlings and colonial vegetative evidence of reproduction;

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 3553

EO Number 76 **Parent EO Number** 99

Additional Inventory Needed N **Comments**

DESCRIPTION

General Description The occurrence is within a Dry Oak-Hickory Forest of high quality along the mid- to lower slopes of two unnamed drainages. The topography is concave, moisture is moist to dry (probably varying seasonally) and site is shaded. Associated species include Quercus alba, Q. phellos, Carya glabra, C. tomentosa, Acer rubrum, Cornus florida, Castanea pumila, Kalmia latifolia, Rhododendron sp., Sassafras albidum, Mitchella repens, Uvularia sp., Epigea repens, Viola sp., Goodyera pubescens, Sanguinaria canadense, Lonicera japonica, Lonicera sempervirens, Osmunda cinnamomea, Asplenium platyneuron, Polystichum acrostichoides, Carex sp., and Panicum sp. (M. Franklin and J. Padgett 2004). [Sub-occurrence A], Mesic Mixed hardwood grading into Dry Mesic Oak Hickory, medium quality to low quality. [Sub-occurrence B], Mesic Mixed Hardwood along mid- to lower slope; Pacolet Soils; medium quality; NE to E facing slopes (mainly); Topoography flat and convex; Moisture is moist to dry; Site is filtered sun/shade; Associated species include: Cary, Liriodendron, Quercus alba, Kalmia, Carpinus, cinnamon fern (Renninger 2003).

Min. Elevation 720 **feet** **Max. Elevation** 790 **feet**

EO Observed Area **acres**

Rep Accuracy High

Separation Comments Located approximately 0.1 mile north of sub EO 172; All sub EOs area located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: Flowers range in color from reddish green to white (Padgett, 2004).

OWNERSHIP

Managed Areas Parris Heartleaf Registered Heritage Area

Owner Type	Owner Name	Notes
Private individual	Joyce and Howard Parris, 7061 US Highway 221 S., Mooresboro, NC 28814	2012, responded with permission to survey; 2015, did not respond

Owner Comments A: Joyce and Howard Parris, 7061 US Highway 221 S., Mooresboro, NC 28814, (828) 248-2464. B: Mike Parris.
Reminder postcard sent 2016.

Management Comments

Protection Comments Site should be protected from impending road widening project (US 221 scheduled for 2005-2006) and installation of water utility line. The owners have expressed an interest in protecting the area through Registry or Dedication. Ann Prince (NCHP) will follow up with owners (Franklin 2004).

Additional Topics 3 plants and 0.010 acres expected to be directly impacted and 32 plants and 0.126 acres expected to be indirectly impacted by this road project (Fontaine 2009 - see Biological Assessment). Individuals of Hexastylis naniflora expected to be impacted by widening of US 221 will be moved to the Tate Conservation Easement site (EO 106) (DOT 2009). "Impacts associated with US 211 widening (R-2233A&B) to be determined" (HDR personnel 2005).

Site Name
Little Gunpowder Creek Rare Plant Site 2

Survey Site
Catawba River: Gunpowder Creek, tributary approximately 3 miles N of Granite Falls.
NCDOT TIP: B-3126 at Gunpowder creek
Possible hybrid

Directions Catawba River: Gunpowder Creek, unnamed tributary approximately 3 miles north of Granite Falls. 1.9 miles east of US321 on SR-1718 (Deal Mill Road) at three locations: A) on the west side of the road along unnamed tributary; B) on the north side of the Gunpower Creek bridge and west of SR-1718; C) on the north side of the Gunpower Creek bridge and east of SR-1718. Plants historically located along road south of the bridge but these were extirpated during the bridge replacement; see Beuregard (2000) for historical extent at this location.

SURVEY INFORMATION

EO Rank CD - Fair or poor estimated viability **EO Rank Date** 2007
EO Rank Comment EOR may need to be downranked after DOT impacts.
EO Data 2013: 617 plants counted on 15 May (NCDOT 2013).
2013-2012: Plants present in 2013 and 2012 at locations A, B, and C as indicated on map provided by NCDOT but made by Stafford; no quantitative data on the number of plants was included (NCDOT 2014).
2011: 731 plants counted on 3 November 2011 by NCDOT
2007: 128 clusters observed by NCDOT in 2007 (NCDOT 2009).
2006: 334 plants are within construction project area (TIP: B-3126); 184 plants are expected to be impacted by construction activites in 2006; 160 plants are to be protected on-site in an area where the acreage needs to be verified (Wells 2006).
2005: 353 individual plants counted by NCDOT staff in April 2005 (HDR and HARP personnel 2005). Site visited with NC-DOT and saw roughly 50-75 plants. The timing was a bit early and the population is questionable as it's flower size and plant morphology favor H. heterophylla rather than H. naniflora. Site should be revisited to confirm as NC-DOT is planning bridge replacment here soon (Padgett 2005).
2003: NCDOT construction impacts expected according to Bassette in 2003 (Bassette 2003).
2000: 50 individual plants, stems and leaves over approximately 0.4 acres observed by Beauregard on 12 April 2000 (Beauregard 2000).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 20238

EO Number 77

Survey Date 2013-05-15 **First Observation Date** 2000-04-12 **Last Observation Date** 2013-05-15

Data Sensitive Element N **Comments**

Monitoring Needs Comments NCDOT has committed to permanent protection and monitoring of at least 160 plants anticipated to remain (after construction) within the currently owned or expanded (through additional purchase) ROW (2006 Ammendment to the 2003 Biological Assessment, on file with USFWS Asheville Office) [C. Wells, 8/2006]. Site was subject to consultation with USFWS (worst-case scenario assumed, in that all Hexastylis plants were H. naniflora). If impacts exceed those anticipated in the 2006 Ammended Biological Opinion issued by FWS, consultation should be re-initiated (ASNC log no. 4-2-03-415, on file with USFWS Asheville Office) [C. Wells, 8/2006].

Research Needs Comments Future surveys should be conducted to assess extent of impacts due to NCDOT's bridge construction. [NCDOT committed to monitoring of this population in their 2006 Ammended Biological Assessment; C. Wells, 8/2006]

Research Needs Comments

Additional Inventory Needed Y **Comments** Population is questionable as it's flower size and plant morphology favor H. heterophylla rather than H. naniflora; site should be revisited to confirm as NC-DOT is planning bridge replacment here soon (Padgett 2005). Inventory should be contucted after bridge replacement to assess impacts (Wichmann 2005).

DESCRIPTION

General Description Mesic Oak-Hickory Forest; medium quality. Forest cover types are fairly similar amongst the three subpopulations. The canopy is dominated by Quercus alba, Q. rubra, Carya glabra, Acer rubrum, Prunus serotina, Liriodendron tulipifera, and Pinus strobus. The understory consists of Carpinus caroliniana, Oxydendrum arboretum, Acer rubrum, Cornus florida, Ilex opaca. The shrub layer includes Kalmia latifolia, Leucothoe axillaris var. editorium, and Euonymus americanus. Woody vines included Bignonia capreolata, Vitis rotundifolia, and Toxicodendron radicans. The herb layer is sparse to moderately dense and includes Hexastylis naniflora, Goodyera pubescens, Aplectrum hyemale, Mitchella repens, Chimaphila maculata, Polystichum acrostichoides, Tiarella sp., and Desmodium nudiflorum (NCDOT 2011). A pasture runs along the north and south banks of creek and a side tributary along road; pasture south of creek recently logged, thick brush, grades into a more mature forest, plants occur under thick brush; pasture north of Creek thick with Ilex opaca and lacking other understory shrubs due to grazing, plants occur in areas safe from cattle, tree bases and along tributary. This population occurs with the following associated species: Betula nigra, Quercus alba, Prunus serotina, Carya glabra, Acer rubrum, Carpinus caroliniana, Leucothoe axillaris var. editorium, Vitis rotundifolia and Mitchella repens (Padgett 2005). Piedmont/Low Mountain Alluvial Forests with Betula nigra, Quercus alba, Prunus serotina, Carya glabra, Acer rubrum, Carpinus caroliniana, Leucothoe axillaris var editorium, Vitis rotundifola, Mitchella repens, Tiarella sp. (Beauregard 2000).

Min. Elevation 1,170 **feet** **Max. Elevation** 1,180 **feet**

EO Observed Area 0.40 **acres**

Rep Accuracy High **Separation Comments** EO is not located within 2.0 kilometers of another known EO of the same species (Wichmann 2005).

General Comments: Invasive species noted & degree of threat from invasive species: Lonicera japonica is prevalent in subpop A. Some Ligustrum sinense is present in subpopulation A. (NCDOT 2011).

OWNERSHIP

Managed Areas NC Department of Transportation Mitigation Site

Owner Type	Owner Name	Notes
Private individual		

Owner Comments

Management Comments

Protection Comments The population on the Southern bank of Gunpowder Creek is expected to be adversely impacted by proposed NCDOT bridge construction. NCDOT has purchased additional property as a right of way easement to protect the remaining population of this element occurrence (Padgett 2005).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 20238

EO Number 77

Additional Topics "B-3126 (EO 77) in Caldwell County was recently inventoried by NCDOT staff due to changes in project alignment. A total of 353 individual plants were counted in April 2005 and proposed project impacts have not yet been determined" (HDR personnel 2005). "B-3126...construction impacts to DFHL are expected if the bridge is replaced on a new alignment to the west of the existing bridge. Consequently, a Biological Conclusion of May Effect is likely to Adversely Affect was rendered for this project. The October 2001 review of the proposed project revealed no changes in land use. Furthermore, indirect or cumulative impacts to DFHL as a result of other development were not observed (Bassette 2003).

Buffalo Creek: northeast of SR 1903
NCDOT TIP: R-2824

Directions Buffalo Creek, northeast of SR 1903: Northeast of Shelby, on SR 1906 (Costner Road) over Buffalo Creek. Population is NW of Road (Underwood 2004). 1.3 miles southeast of Beam Mill. From Shelby, NC drive on State Route 18 North to State Route 1906 East for 1.3 miles over Buffalo Creek. The element occurrence is located on the North side of State Route 1906 along the bluff of Buffalo Creek (Dollison 2004).

SURVEY INFORMATION

EO Rank D - Poor estimated viability **EO Rank Date** 2005-Spr
EO Rank Comment EO rank is based on EO Rank Specs for this species (Wichmann 2005).
EO Data in the spring of 2005, HDR estimated 267 plants based on counts from 8 sample plots, 1/100 acre in size, established over approximately 0.45 acres (HDR 2005). Underwood counted eight individuals on 29 April 2004, defined as several stems with leaves and flowers (Underwood 2004).

DESCRIPTION

General Description ".. northwest facing slope...consists primarily of Mesic Mixed Hardwood Forest...The population at this site is found on a moist, very steep slope dominated by mixed hardwoods...Dominant vegetation includes American beech, sourwood, white oak, American hornbeam (*Carpinus caroliniana*), chestnut oak, and sweetgum (*Liquidambar styraciflua*). The herb, shrub, and vine layers include hepatica (*Hepatica spp*.), Christmas fern (*Polystichum acrostichoides)*, privet (*Ligustrum* spp.), bloodroot *(Sanguinaria canadensis)*, and sweetshrub (*Calycanthus floridus)* (HDR 2005). "Upland Hardwoods, on Face/crest of slope, fairly dry"(Underwood 2004).
Min. Elevation 795 **feet** **Max. Elevation** 870 **feet**
EO Observed Area 0.45 **acres**

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 20249

EO Number 85

Rep Accuracy High

Separation Comments Parent EO 232 occurs 2.1 km to the south within the Buffalo Creek Rare Plant Site.

Catawba River: Lower Creek: Miller Creek, headwaters near Martin Marietta Materials

Directions Catawba River: Lower Creek: Headwaters of Miller Creek, near Martin Marietta Materials; 2 miles south of Lenior. Travel South on US 321A to Connelly Springs Road, then 2.0 miles South. Martin Marietta Materials service entrance is located on the west side of Connelly Springs Road at junction of Colliers Church. The occurrence is located 0.2 miles North of end of Martin Marietta Materials service road along unnamed tributary of Miller's Creek.

SURVEY INFORMATION

EO Rank D - Poor estimated viability **EO Rank Date** 2011-11-04
EO Rank Comment EO rank based on EO rank specs for the species and most recent EO data (Wichmann 2005).
EO Data 55 plants dug by HARP on 04 November 2011 and relocated to EO 294 (Bud Geitner Park); relocation occurred to permit expansion at the quarry [see 'Additonal Topics']; a few plants were left at the site but, if the quarry is expanded, they will be extirpated (HARP 2011, Matthews 2012). 95 individual plants total: 42 vegetative and 53 in flower or bud (Matthews 2004).

DESCRIPTION

General Description This population occurs with associated species of Quercus prinus, Kalmia latifolia, Quercus rubra and Fagus grandifolia (Matthews 2004).
Min. Elevation 1,180 **feet** **Max. Elevation** 1,200 **feet**
EO Observed Area 0.05 **acres**
Rep Accuracy High **Separation Comments** EO is not located within 2.0 kilometers of another known EO of the same species (Wichmann 2005).
General Comments: Relocation of plants from this occurrence occurred to permit expansion at the quary. At the request of Martin Marietta, negotiations were held with USFWS regarding the potential for transplanting the population. This action was approved verbally by USFWS on 23 May 2011 (HARP 2011).

Site Name
New Bethel Rare Plant Site

Survey Site
Broad River: New Bethel Plant Site (sub of 247).
Tate Conservation Easement Transplant site
NCDOT TIP: 2233 A and B

Directions Broad River: Floyds Creek near Harris, unnamed tributary just east of US 221 and just north of the Clinchfield Railroad. This is a sub EO of Parent EO 247 (Wichmann 2005). Two sub-occurrences ([A] and [B]): [A], ravine just northeast of US 221, approximately 0.2 mile north of the Clinchfield Railroad (Wichmann 2005); "I-74 to US 221 south; travel south just past Jayne's Road, plants are in low area to east of 221" (Renniger 2005). [B], "Along and unamed tributary to Floydes Creek;approximately 2000' south of US 221 intersection with SR 1111; east of US 221 along creek to Railroad tracks; use Jayne's Rd (no SR) for access" (Renninger 2003). [Note: Transplant plots (EO 286) source feature currently overlaps area of native plants (EO 106). M. Buchanan (pers. comm. with S. Mason, 10 March 2009) advised to leave mapping this way because the native population may be patchy and the polygon provided by Padgett (2007) may not account for this and encompass the entire extent of the occurrence.]

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2008-04-22

EO Rank Comment Changed to A, according to rank specs (2008). Moved back up from C to B once quantitative data was added (Padgett 2007). Downgraded from a B to a to C using current EO data and following current EO rank specs for this species (Wichmann 2005).

EO Data **2015**: 4547 plants counted on 23 April (NCDOT 2015).
2013: 1675 plants counted on 16 April (NCDOT 2013).
2012: Wagner et. al. observed over 3000 plants on 15 March 2012 (Wagner 2012).
2011: 3088 plants countedon 15 April (NCDOT 2011).
2010: 93 plants moved from the area to be impacted by the road project to the transplant area on this site on 27 January 2010 by NCDOT biologists (Fontaine 2010 - docmentation with EO 286). NCDOT staff propose to transplant 330 individuals that occur within the construction footprint to the Tate Conservation Easment during the winter of 2009-2010 (NCDOT 2009) [Relocated plants are tracked under EO 286].
2008: NCDOT staff, including Fontaine, observed at total of 2,326 plants at this site in 2008: 2104 plants were observed on both sides of the unnamed tributary of Floyd's Creek between the Chinchfield railroad tracks and Jaynes Road (SR-2287) on 22 April
2008: 222 plants (some in flower) were observed on 28 February 2008 along the ephemeral stream perpendicular to US-221 that feeds into the unnamed tributary (Fontaine 2008). Additional plant found along a small cove area between the original known localities along the unnammed tributary [sub occurance B] and the small clump of plants found along the highway (US 221) [sub occurance A]. Estimated 50-75 additional plants. This occurance was re-mapped to reflect this additional find (Padgett 2008).
2005: 641 clumps observed and counted on 20 April 2005 by H W Lochner and Padgett (Padgett 2007). Estimated between 200-500 plants seen (Padgett 2005).
2003: Sub-occurrence [A], 8 clumps, 4 seedlings over 0.02 acres; vegetative reporduction evident (Renninger 2003).
Sub-occurrence [B], Approximately 250 individual clumps, in leaf and flower, seedlings and clonal/vegetative reproduction evident; flowers mostly disintegrated (Renninger 2003).

Research Needs Comments

Additional Inventory Needed N **Comments** Occurrence located during survey work for the Rutherfordton Bypass (T.I.P. R-2233A&B), areas outside of proposed corridor, alternative corridors, and areas of potential indirect effects were not surveyed (Wichmann 2005).

DESCRIPTION

General Description Sub-occurrence [A], Dry-mesic Oak Hickory; high quality; Associated species: Quercus alba, Quercus rubra, Quercus coccinea, Quercus velutina, Carya tomentosa [C. alba], Pinus echinata, Oxydendron arboretum, Euonymus americana, Cornus florida, Liriodendron tulipifera, Lonicera sempervirens, Carex sp (Renninger 20005). Sub-occurrence [B], Mesic Mixed Forest grading into Basic Mesic Forest, medium to high quality, Pacolet soils; Associated species: red oak, white oak, strawberry bush, carpinus, sourwood; alluvial and lower to upper slope; Micro-relief: flat, concave, convex, and drop-off; moist to dry; filtered light (Renninger 2003).

Min. Elevation 760 **feet** **Max. Elevation** 870 **feet**

EO Observed Area 3.00 **acres**

Rep Accuracy Medium

Separation Comments All sub EOs area located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: NCDOT proposes to use this site as a repository for approximately 333 Hexastylis naniflora plants that will be displaced by the US 221 road widening project. These plants may come from EOs 076, 107, 113, 114,122, 172, 173, 174, and 175 (DOT 2009). 0.293 acres and 50 plants anticipated to be directly affected and 0.475 acres and 255 plants indirectly affected by this project (Fontaine 2009 - see Biological Assessement).

EO Number 106 **Parent EO Number** 247

Owner Type	Owner Name	Notes
Private individual	Robert and Carolyn Tate	4411 US 221 South, Forest City, NC 28043; (828) 245-2910
State government	NC Department of Transportation	

Owner Comments

Management Comments

Protection Comments Landowner along northeastern part of EO unwilling to enter into a conservation easement agreement with NCDOT (Bassette 2009). This population is expected to be protected with a conservation easement held by NC DOT as mitigation for impacts related to the widening of NC 221. The Tate family will retain ownership of the land (DOT 2009).

Additional Topics The two sub occurences have been remapped and combined after additional plants were found between them (Padgett 2008). Sub-occurrence [A], "Along proposed US 221 widening corridor (NCDOT TIP# R2233A)" (Renninger 2005). Impacts associated with US 211 widening (R-2233A&B) to be determined" (HDR personnel 2005). Sub-occurrence [B], May be inpacted by US 221 widening (Renninger 2003). "impacts associated with US 211 widening (R-2233A&B) to be determined" (HDR personnel 2005).

USFWS Flex Fund Monitoring Site 9 (in part)
NCDOT R-2233 A and B

Directions Broad River: Floyds Creek, Long Branch, unnamed tributary 0.3 mile south east of Huntley Church on the south west side of US 221. This is a sub EO of parent EO 177(Wichmann 2005). Shiloh: US 221, 1 mile north of US 74, unnamed tributary to Long Branch of Floyds Creek; located in a thin band along stream bank in most areas, on both sides [includes EO 122] of US 221 (Renninger 2003).

SURVEY INFORMATION

EO Rank B - Good estimated viability **EO Rank Date** 2015-05-20

EO Rank Comment EO rank raised to reflect quantative data and EO specs (Padgett 2007). EO rank based on EO rank specs for this species (Wichmann 2005).

EO Data This suboccurrence is included in the determination of total extrapolated acreage for USFWS Flex Fund Monitoring Site 2, although it was not surveyed.
2015: 241 plants counted on 19-20 May in 0.24 acres of monitoring plots for sub EOs 016, 107, 163, 164, 165, and 166. Estimated 2360 total plants covering the entire 2.35 acres (Padgett and Feldman 2015).
2012: Wagner et. al. counted over 100 plants on 15 March 2012. (Wagner 2012).
2008: 239 plants counted by NCDOT in 2008 (NCDOT 2009, Fontaine 2009).
2005: Combined with sub EO 122, there were 554 clumps observed and counted in April 2005 by H W Lochner and Padgett (Padgett 2007).
2003: Approximately 250 clumps occurring over approximately 1 acre [includes EO 122] (Renninger 2003).

Source Feature Identifier 25044

Source Feature Locator Broad River: Floyds CrK, Long Branch, tributary 0.3 mile SE of Huntley Church & SW of US 221 (sub of 177).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2015-05-29
EO Rank Comment

EO Data **2016**: 973 plants counted by Bloom on 13 May 2016. Estimated 12,235 plants covering the entire 5.03 re-mapped acres (Bloom 2016).
2015: 978 plants counted by Padgett on 29 May 2015 in 0.4 acres of monitoring plots. Estimated 9,707 total plants covering the entire 3.97 acres (Padgett 2015).
2014: Padgett counted 967 plants within monitoring plots on 19 May 2014 and estimated 9,597 plants covering 3.97 acres of mapped area (Padgett 2014).
2013: Padgett and Israel visited monitoring plot and counted 983 plants in permanent plot on 07 July 2013 and estimated the total population size to be approximately 9756 plants (Padgett 2013).
2012: This site was visited and remapped in June of 2012 by James Padgett and Laura Gadd (NHP). The site was visited again in July and a permanent plot was placed in and 950 plants counted with a population estimate of 9429 plants was made by Padgett and Israel on 17 July 2012 (Padgett 2012).
2005: Pagdett estimated 1,500 plants (Padgett et. al 2005).
1994: Raynor noted that it occurs in abundance in 1994 (Rayner 1994).

Monitoring Needs Comments

Research Needs Comments

Research Needs Comments

Additional Inventory Needed N **Comments** Padgett accurately mapped the entire site in 2012. This site is part of a multi-year USFWS monitoring project focusing on the viability of Hexastylis naniflora (Padgett 2012).

DESCRIPTION

General Description LOW ELEVATION SEEP (PIEDMONT/MOUNTAIN SPRINGHEAD SUBTYPE – Canopy is primarily Liriodendron tulipifera, but also includes Pinus echinata, Quercus alba, Liquidambar styraciflua, and Acer rubrum. The sub canopy is primarily Acer rubrum and Nyssa sylvatica. The shrub layer is predominately Ilex opaca, Kalmia latifolia, Viburnum nudum var. nudum, and Calycanthus floridus. Other shrubs found throughout are Amelanchier arborea, Vaccinium corymbosum, Rhododendron periclymenoides, Xanthorhiza simplicissima, and Itea virginica. Along the drier edges of the seep are individuals of Asimina triloba. Much of the shrub layer is bound up with Smilax laurifolia and less often with Smilax rotundifolia, Muscadinia rotundifolia, and Parthenocissus quinquefolia. The herbaceous layer is dominated by Parathelypteris noveboracensis, Osmundastrum cinnamomeum, Osmunda spectabilis, but also includes Polystichum acrostichoides, Viola primulifolia, Viola sororia, Arundinaria gigantea Lorinseria areolate, Arisaema triphyllum, Sagittaria latifolia, Medeola virginiana, Mitchella repens, and Microstegium vimineum. (Bloom 2016)
Boggy seep in low woods along stream with Thelypteris noveboracensis, Ilex opaca, Liquidambar styraciflua, Calycanthus floridus, Xanthorhiza simplicissima, Itea virginica, Euonumus americana, Medeola virginiana, Rhododendron pariclymenoides, Smilax rotundifolia, Quercus alba, Lirodendron tulipifera, Viburnum nudum, Arundinaria sp., Kalmia carolina, Osmunda cinnamomea, and Aronia arbutifolia (Franklin et al. 2005). Springhead swamp (Rayner 1994).

Min. Elevation 270 **feet** **Max. Elevation** 300 **feet**

EO Observed Area 4.80 **acres**

Rep Accuracy Medium **Separation Comments** EO is located within 2.0 kilometers of another EO (EO 124), however is separated by unsuitable habitat, a road, and are not within the same drainage (Robinson 2015).

General Comments: The area around the monitoring plot is an intact and high quality natural community. However, impacts at the eastern end of the EO are causing some habitat degradation. The shrub layer is becoming heavily invaded by Ligustrum sinense and the herbaceous layer is quickly getting invaded by Microstegium vimineum. Additionaly a cleared hunting lane at the eastern end of the occurrence is of low severity and scope and of high immediacy (Bloom 2016).

OWNERSHIP

Site Name
Broad River/Sandy Run Natural Areas

Survey Site
Broad River/Sandy Run Natural Areas: Sandy Run Creek, 1st tributary S of Grog Creek, to the NE (Sub of 100)
NCDOT Broad River Mitigation Tract
NCDOT TIP: R-2707 US 74 Shelby Bypass

Directions Broad River/Sandy Run Natural Areas: Sandy Run Creek, first unnamed tributary south of Grog Creek and on the northeast side of Sandy Run Creek. NC DOT Broad River Tract Sites A, B, and N. James Padgett's 2001 Site 7. This is a sub EO of Principal EO 100 (Wichmann 2005). In three sub-occurrences along the tributary: A-South, adjacent to Sandy Run Creek; B-Middle, between A and C; C- North, at the headwaters (Wichmann 2005).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2009-04-21

EO Rank Comment

EO Data 2012: 2722 total: 1501 plants counted at Site A, 954 plants counted at Site B and 267 plants counted at Site N by NCDOT biologists on 15 May 2012 (Bassette 2015).
2012: Wagner et. al. observed over 1000 plants on 15 March 2012. Individuals spread out over sub-occurences within 2 km of each other (Wagner 2012).
2008: 1,426 plants total counted by NCDOT biologists at sites A, B in April 2008 and site N on 21 April 2009 (Bassette 2009).
2003: 1,430 individuals observed over 3 sub-occurrences by NC DOT personnel (Bassette 2003).
2001: [sub-occurrence A:]Couple thousand individuals - Estimated 5,000 [over-estimation Padgett, 2005] plus, biggest population seen (Padgett 2001).

DESCRIPTION

General Description Mountain laurel, holly, witch-hazel; Pin and hardwoods, oaks (Bassette 2003). Heath Bluff with plants occurring under Kalmia latifolia and Plystichium acrostichoides along stream and slopes(Padgett 2001).

Min. Elevation 650 **feet** **Max. Elevation** 800 **feet**

EO Observed Area 6.00 **acres**

Rep Accuracy High

Separation Comments All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments:

OWNERSHIP

Managed Areas Broad River Greenway
NC Division of Mitigation Services Easement
NC Department of Transportation Mitigation Site

Owner Type	Owner Name	Notes
State government	NC DOT	

Owner Comments "Ownership of the Broad River Tract will ultimately be conveyed to Cleveland County, with the Broad River Greenway Association acting as the County's steward to the property" (Bassette 2003).

Management Comments

Protection Comments Occurrence is contained within NC DOT mitigation site, the Broad River Tract; see reference U03BAS01NCUS (Wichmann 2005).

SURVEY INFORMATION

EO Rank C - Fair estimated viability **EO Rank Date** 2015-05-26
EO Rank Comment Changed EO rank from E to C based on data collected during site visits in 2012 (Padgett 2012). --EO data not reported with report of occurrence (Wichmann 2005).

EO Data 2016: 288 plants counted by Bloom on 18 May 2016 in 0.53 acre monitoring plot. Estimated 2,576 plants over entire 4.74 remapped acres in 2016 (Bloom 2106).
2015: 348 plants counted on 26 May 2015 in 0.53 acres of monitoring plots. Estimated 5,273 total plants covering the entire 8.03 acres (Padgett 2015).
2014: Padgett counted 324 plants within monitoring plots on 28 May 2014 and estimated 4,909 plants covering 8.03 acres of mapped area (Padgett 2014).
2013: Padgett and Israel counted 353 plants in permanent monitoring plots on 18 July 2013, and estimated the entire population to be 5348 plants covering an area of 8.03 acres (Padgett 2013).
2012: Site revisited in June 2012 by James Padgett and remapped. The site was revisited by James Padgett, Kimberly Israel, and Bryan Tompkins (USFWS) on 16 July, 2012. A permanent plot was installed and plants were counted with an extrapolated estimate of 4773 plants found to occurr on the site (Padgett 2012).
2006: Entire area estimated to contain over 2,500 rosettes in 2006, 160 of which were relocated (on-site) to areas not expected to be impacted from construction. Approximately 12 acres and at least 2,340 plants are to be permanently protected via a deed restriction or conservation easement [C. Wells, USFWS files and S&ME Biological Assessment.]
2005: Number unknown, "along stream corridors throughout the site" on 24 March 2005 (C. McRae and L. Beckstrom 2005).

SURVEY INFORMATION

EO Rank D - Poor estimated viability **EO Rank Date** 2016-05-24
EO Rank Comment This EO rank was downgraded from a C rank due to the overall quality of the site (Padgett 2012). -- EO rank is based on EO Rank Specs for this species (Wichmann 2005).

EO Data **2016**: 123 plants counted on 24 May 2016 in the entire 0.09 acre re-mapped (Bloom 2016).
2015: 188 plants counted on 14 April 2015 in the entire 0.2 acres mapped (Padgett 2015).
2014: Padgett counted a total of 183 plants in the summer of 2014 (Padgett 2014).
2013: Padgett counted 204 total plants on 16 July 2013 (Padgett 2013).
2012: 556 plants counted on 17 December (NCDOT 2012).
2012: This site was remapped in June of 2012 by James Padgett and Laura Gadd (NHP); James Padgett counted 256 plants on 19 June 2012. The site was timbered (clear cut) early spring of 2012.
2010: 535 total plants counted on 1 December 2010; 312 on the east side of the road and 223 on the west side (Hermann 2010).
2005: -- 334 Hexastylis plants were directly counted on this site; 325 on the east side of SR 1115 and 9 on the west side; plant density calculates to 1392 plants per acre (HDR 2005).
2003: 357 plants counted in 2003 by Tim Bassette, 189 on the west side and 357 on the east side (Hermann 2010).
2001: Approximately 546 plants in two areas: 357 counted over 0.41 ac along the east side of Camp Creek Road; 189 counted over 0.19 ac. along the west side of the road; 7 May 2001(Bassette 2003).

Owner Comments

Management Comments This site has been timbered and is part of a USFWS multi-year monitoring project (Padgett 2012)

Protection Comments This site has no formal protection and has recently been timbered (Padgett 2012). -- Portions of this site that are not included in the NCDOT ROW could be threatened by additional timbering activities (HDR 2005).

Additional Topics NCDOT is responsible for monitoring this population per our agreement with USFWS as stated in the Lovelady Road BO. Much of this population, which includes the east and west side of SR 1115, is outside of the ROW (Hermann 2010). "This non-TIP NCDOT Division 12 road construction project.. may affect all of or portions of [EO 158]...Per a September 22, 2002 conversation with Trish Simon, NC Division 12 Environmentsal Officer, the project is estimated to directly impact approximately 20-30 DFHL plants. Project construction has also been delayed for at least a couple of years" (Bassette 2003).

DESCRIPTION

General Description North-facing slope. "Vegetation along these slopes is representative of a Mesic Mixed Hardwood Forest, and is situated adjacent to a residence and Micol Creek. At this site, vegetation transitions from a mixed pine hardwood forest to pine forest as the slope turns to the west. The mixed hardwood forest includes a canopy containing mockernut hickory (*Carya tomentosa*), yellow poplar (*Liriodendron tulipifera*), northern red oak (*Quercus rubra*), and white pine (*Pinus strobus*). Rhododendron (*Rhododendron* sp.), mountain laurel (*Kalmia latifolia*), and sourwood (*Oxydendrum arboreum*) are prevalent at this site. In addition, an herb and vine layer is present including galax (*Galax urceolata*), partridge berry (*Mitchella repens*), and
smilax (*Smilax* sp.)" (Ref. U05HDR01NCUS).

Min. Elevation 1,080 **feet** **Max. Elevation** 1,170 **feet**

EO Observed Area 2.19 **acres**

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 21387

EO Number 159 **Parent EO Number** 178

Rep Accuracy High

Separation Comments Parent EO 178 is approximately 1.5 air kilometers from Parent EO 029, however the occurrences are separated by unsuitable habitat (ridge and town) greater than 1 kilometer wide and are therefore independent Parent EOs (Wichmann and Franklin 2005).

DESCRIPTION

General Description North facing slope...primarily of Mesic Mixed Hardwood Forest...Vegetation includes chestnut oak (*Q. prinus*), white oak, sourwood, mockernut hickory, red oak, strawberry bush, bellwort (*Uvularia sessilifolia*), blueberry, sassafras (*Sassafras albidum*), Solomon's seal (*Polygonatum spp.)*, and smilax...It is possible that *Hexastylis* (particularly *H. naniflora*) habitat improves on the north side of SR 1473 as the slope is lower and closer to Miller Branch. However, extensive kudzu (*Pueraria* spp.) is growing along the road and continues down the slope; no *Hexastylis* plants were observed. Should the invasive species cross the road, it would be a serious threat to this population (HDR 2005).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 21393

EO Number 162 **Parent EO Number** 179

Min. Elevation 1,030 **feet** **Max. Elevation** 1,070 **feet**

EO Observed Area 0.04 **acres**

Rep Accuracy High

Separation Comments All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: Kudzu growing within the clear-cut north of the site and in the ditch adjacent to the site may significantly alter the habitat if it encroaches from the road (NCDOT 2012).

"From I-74, head north on US 221, turn left on Poors Ford Road (South). Turn left on Woodland Estate. The site is on the left near the end of the road, downslope from the clearcut" (Renninger 2005).

SURVEY INFORMATION

EO Rank B - Good estimated viability **EO Rank Date** 2015-05-20

EO Rank Comment EO rank is based on EO Rank Specs for this species (Wichmann 2005).

EO Data This suboccurrence is included in the determination of total extrapolated acreage for USFWS Flex Fund Monitoring Site 2, although it was not surveyed.
2016: This sub occurrence was re-delineated on 11 May 2016 and is 2.38 acres (Bloom 2016).
2015: 241 plants counted on 19-20 May in 0.24 acres of monitoring plots for sub EOs 016, 107, 163, 164, 165, and 166. Estimated 2360 total plants covering the entire 2.35 acres (Padgett and Feldman 2015). This suboccurrence is included in the determination of total extrapolated acreage for USFWS Flex Fund Monitoring Site 9, although it was not surveyed.
2005: 657 clumps over 0.83 acres, in leaf and flower, seedlings and vegetative reproduction evident, only a few plants left in clearcut, majority in wetland (Renninger 2005).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 21394

EO Number 163 **Parent EO Number** 177

DESCRIPTION

General Description LOW ELEVATION SEEP (PIEDMONT/MOUNTAIN SPRINGHEAD SUBTYPE – Canopy is primarily *Acer rubrum* and includes *Liriodendron tulipifera, Nyssa sylvatica*, and less so *Fraxinus pennsylvanica*. The sub canopy is primarily *Oxydendrum arboretum, Ilex opaca,* and *Nyssa sylvatica.* The shrub layer is predominately *Viburnum nudum var. nudum, Amelanchier arborea, Alnus serrulata, Vaccinium corymbosum,* and *Itea virginica*. Much of the shrub layer is bound up with *Smilax laurifolia* and less often *Smilax rotundifolia*. The herbaceous layer is dominated by *Parathelypteris noveboracensis* but also included *Arundinaria gigantea*, *Osmundastrum cinnamomeum, Osmunda spectabilis*, and *Lorinseria areolata*. Other herbaceous plants that were less prevalent include *Arisaema triphyllum, Medeola virginiana,* and *Mitchella repens*. (Bloom 2016)
Wetland/streambank and clearcut; no associated NCHP natural community, medium quality; Associated species in wetland/streambank include: Acer rubrum, Liriodendron tulipifera, Ilex opaca, Ligustrum sinense, Smilax laurifolia, oxydendron arboretum, and Arundinaria gigantea; Associated species in clearcut include: Acer rubrum, Carya tomentosa, and Andropogon virginicus (Renninger 2005).

Min. Elevation 1,100 **feet** **Max. Elevation** 1,200 **feet**

EO Observed Area 0.83 **acres**

Rep Accuracy High

Separation Comments All sub EOs are located within 2.0 kilometers of on another and area not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005).

General Comments: Observed threats: Invasive Species (Primarily Rosa multiflora, Lonicera japonica, and Ligustrum sinense) – Found at the western end of the EO. Threat: Moderate / Scope: Low / Immediacy: High (Bloom 2016).

OWNERSHIP

Managed Areas

Site Name

Survey Site
Broad River: Floyds Creek, Long Branch, unnamed tributary 1.2 mile NW of Danieltown (Sub of 177)
NCDOT TIP: R-2233A&B
USFWS Flex Fund Monitoring Site 9 (in part)

Directions Broad River: Floyds Creek, Long Branch, unnamed tributary about 1.2 road miles north west of Danieltown, just south west of US 221. This is a Sub EO of Parent EO 177 (Wichmann 2005). Ravine southwest of 221 along a tributary located 0.4 mile noth of where US 221 crosses over Long Branch (Wichmann 2005). Shiloh: 1.4 miles northwest of Danieltowm. West of US 221 along a small unnamed stream near the exit ramp of US 74 (Padgett 2005). "From I-74, US 221 South. Immediate right on logging road just north of Visitor Center. Follow road toward I-74 at split. Plants are along first stream" (Renninger 2005).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2005-03-31

EO Rank Comment EO rank is based on EO Rank Specs for this species (Wichmann 2005).

EO Data **2016:** 537 plants counted by Sean Bloom in monitoring plots on 11 May 2016. (Bloom 2016).
2015: This suboccurrence is included in the determination of total extrapolated acreage for USFWS Flex Fund Monitoring Site 9, although it was not surveyed. 241 plants counted on 19-20 May in 0.24 acres of monitoring plots for sub EOs 016, 107, 163, 164, 165, and 166. Estimated 2360 total plants covering the entire 5.21 acres (Padgett and Feldman 2015).
2013: 2012 and 2013 data is part of the status survey monitoring data for Principle EO 177 (Padgett 2013). Padgett and Israel observed 240 plants in a permanent monitoring plot on 7 May 2013 (Padgett 2013).
2012: Padgett counted 204 plants for permant monitoring plot in July 2012 (Padgett 2012).
2005: 657 clumps over 0.6 acres in leaf and flower, seedling and vegetative reproduction evident (Renninger 2005).

DESCRIPTION

General Description Mesic Mixed Hardwood Forest (Piedmont Subtype) – The slope has a canopy consisting of *Liriodendron tulipifera, Quercus montana, Liquidambar styraciflua*, and *Quercus rubra*. Other canopy trees include *Prunus serotina* and *Sassafras albidum*. The sub-canopy includes *Cornus florida, Nyssa sylvatica*, and *Ilex opaca*. The shrub layer is open but includes *Kalmia latifolia, Rhododendron periclymenoides*, and saplings of canopy trees. The herbaceous layer was sparse but included U*vularia sp., Mitchella repens, Polystichum acrostichoides, Parathelypteris noveboracensis, Chamaelirium luteum*, and *Tipularia discolor*. (Bloom 2016)

LOW ELEVATION SEEP (TYPIC SUBTYPE) – Found between toe of slope and the tributary. Canopy is primarily *Acer rubrum* and *Liquidambar styraciflua*, but includes some *Oxydendrum arboreum*. The shrub layer includes *Calycanthus floridus*, *Viburnum nudum var. nudum*, *Ilex montana*, *Aronia arbutifolia*, and *Vaccinium corymbosum*. The herbaceous layer is dominated by *Parathelypteris noveboracensis* but also included *Osmundastrum cinnamomeum, Osmunda spectabilis*, and *Lorinseria areolata*. Other herbaceous plants that were less prevalent include *Arisaema triphyllum* and *Mitchella repens*. (Bloom 2016)

Mesic Mixed Harwood grading into Dry-Mesic Oak-Hickory; medium quality. Adjacent areas extensively logged and/or thinned. Associated species: Quercus alba, Pinus serotina, Liriodendron tulipifera, Ilex opaca, Quercus montana, Carya tomentosa [C. alba], Kalmia latifolia, Ligustrum sinense, Polystichum acrostichoides, Tipularia discolor, Lonicera japonica, and Smilax sp. (Renninger 2005).

Min. Elevation 1,090 **feet** **Max. Elevation** 1,110 **feet**

EO Observed Area 0.60 **acres**

Rep Accuracy High

Separation Comments This sub EO is located very near EO 164, but the two are separated by US 221 and are therefore treated as two Sub EOs for data organization; All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: Observed threats: Invasive Species (Primarily Rosa multiflora, Lonicera japonica, and Ligustrum sinense) – Found at the western end of the EO. Threat: Moderate / Scope: Low / Immediacy: High (Bloom 2016)

OWNERSHIP

Managed Areas

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes
Private individual	Crowe Family Trust	2012 no response

Owner Comments

Management Comments

Protection Comments EO is not located within a Registered/Dedicated Heritage Area, nor managed area (Wichmann 2005). Only Hexa nan population in the Yadkin River Basin; Small stream heads in this area need protection, conversion to peach orchards, ponds, etc. is a threat (Padgett 2005). Streamhead community with Hexa nan is uncommon (Wichmann 2005).

Additional Topics "impacts associated with US 211 widening (R-2233A&B) to be determined" (HDR personnel 2005). May incur secondary impacts from Rutherfordton Bypass (NCDOT TIP No. R2233B) (Renninger, 2005).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2015-05-19

EO Rank Comment EO rank is based on EO Rank Specs for this species (Wichmann 2005).

EO Data This suboccurrence is included in the determination of total extrapolated acreage for USFWS Flex Fund Monitoring Site 2, although it was not surveyed.

2016: Bloom re-delinated the population and collected monitoring data in monitoring plots on 20 May 2016 (Bloom). See parent EO 176 for data.

2015: 778 plants counted on 19 May 2015 in 0.68 acres of monitoring plots in sub EOs 167, 170, and 176. Estimated 6,400 total plants covering the entire 6.84 acres (Padgett and Feldman 2015).

2014: Padgett counted 797 plants within monitoring plots for principal EO 176 on 20 May 2014 and estimated 8000 plants covering 6.84 acres of mapped area (Padgett 2014).

2013: Monitoring data is part of monitoring data for principle EO 176 (Padgett 2103).

2012: Padgett counted 367 plants for two permanent monitoring plots on 24 July 2013 (Padgett 2013). Padgett counted 351 plants for two permanent monitoring plots on 21 July 2012 (Padgett).

2005: 3,469 over 5.05 acres, seedlings and vegetative reproduction evident (Renninger 2005).

SURVEY INFORMATION

EO Rank C - Fair estimated viability **EO Rank Date** 2015-05-19

EO Rank Comment EO rank is based on EO Rank Specs for this species (Wichmann 2005).

EO Data **2016:** 191 plants counted on 18 May 2016 by Bloom in 0.25 acre of monitoring plot; entire sub occurrence delimited in 2016, 0.57acres (Bloom 2016).
2015: 778 plants counted on 19 May 2015 in 0.68 acres of monitoring plots in sub EOs 167, 170, and 176. Estimated 6,400 total plants covering the entire 6.84 acres (Padgett and Feldman 2015).
2014: Padgett counted 797 plants within monitoring plots for principal EO 176 on 20 May 2014 and estimated 8000 plants covering 6.84 acres of mapped area (Padgett 2014).
2013: Monitoring data is part of monitoring data for Principle EO 176 (Padgett 2013). Padgett and Israel counted 413 plants in permanent monitoring plot on 17 July 2013 (Padgett, 2013).
2012: 287 plants counted in permanent monitoring plot by Padgett and Israel on 18 July 2012 (Padgett 2012).
2005: 340 stems over 0.57 acres; seedlings and vegetative reproduction evident (Renninger 2005).

EO Rank D - Poor estimated viability **EO Rank Date** 2003-05-03

EO Rank Comment EO rank is based on EO Rank Specs for this species (Wichmann 2005).

EO Data 35 plants moved from the area to be impacted by the road project to the transplant area at the Tate conservation easement (EO 286) on 27 January 2010 by NCDOT biologists (Fontaine 2010 - docmentation with EO 286). 119 clumps observed and counted in April 2005 by H W Lochner and Padgett (Padgett 2007). 75 clumps over 0.26 acres in leaf and flower, vegetative reproduction evident (S. Smith 2003).

Source Feature Identifier 28191

Source Feature Locator Broad River: Floyds Creek near Harris, unnamed tributary west of US 221

Source Feature Descriptor 2005; Lochner and Padgett

Surveyors Susan Smith, HW Lochner
Ken Roeder, HW Lochner
James Padgett, NHP

Survey Type Quantitative ground survey

Survey Date 2010-01-27 **First Observation Date** 2003-05-03 **Last Observation Date** 2010-01-27

DESCRIPTION

General Description Mixed mesophytic forest; fairly undsiturbed habitat with Osmunda cinnomomea, Polystichum acrosticoides, Liriodendron tulipifera, and Acer rubrum (S. smith 2005).

Min. Elevation 810 **feet** **Max. Elevation** 830 **feet**

EO Observed Area **acres**

Rep Accuracy High

Separation Comments This EO is less than 0.1 km away from EO 114, the two occurrences are separated by road and are therefore treated as sub EOs of the same principal EO; All sub EOs are located within 2.0 kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

Research Needs Comments
Additional Inventory Needed N **Comments** There is a high probability of additional occurrences to be located along the Lake, numerous small streams, and north-facing slopes in suitable habitat (Padgett 2016)

DESCRIPTION

General Description Slopes and stream corridors along the south side of the lake containing north-facing slopes and suitable habitat. The forests is a mixture of planted pines, moxed hardwoods, Dry-Mesic Mixed Hardwoods, and Mesic Mixed Hardwoods. Coves in some locations contain Kalmia latifolia, Rhododenron maximun and R. minus and form marginal Acidic Cove Forest.
Min. Elevation 1,080 **feet** **Max. Elevation** 1,180 **feet**
EO Observed Area 93.00 **acres**

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 21676

EO Number 178

Rep Accuracy Medium

Separation Comments All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details. Parent EO 178 is approximately 1.5 air kilometers from EO 029, however the occurrences are separated by unsuitable habitat (ridge and town) greater than 1 kilometer wide and are therefore considered independent principal EOs (Wichmann and Franklin 2005).

General Comments:

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes

Owner Comments

Management Comments There needs to be some management decisions made concerning the planted pines to consider if they should bew cut to allow hardwoods to regenerate (Padgett 2016).

Protection Comments Some of the areas of occurrence are propsoed to be added into conservation through a CWMTF grant (application submitted and site surveyed - Padgett 2016).

USFWS Flex Fund Monitoring Site 2 (in part)

Directions Broad River: Dills Creek, unnamed tributary south of the Kudzu Rare Plant Site on the northeast side of Dills Creek. This is a sub EO of parent EO 099 (Wichmann 2005). 1st major tributary northeast of the Broad River, north of SR 1123 (Wichmann 2005). "take SR 1122 [N], 1.2 miles to [unnamed] road on left before you get to SR 1120 (on the right), old road goes across pature to head of stream, approximately 0.3 mile (see attached map)" (Padgett 2001). 0.2 mile south of SR 1122 at the head of a stream [directions from former subpopulation 2 of EO 010].

SURVEY INFORMATION

EO Rank AB - Excellent or good estimated viability **EO Rank Date** 2001-03-27

EO Rank Comment EO rank is based on EO rank specs for this species and current EO data (Wichmann 2005).

EO Data This suboccurrence is included in the determination of total extrapolated acreage for USFWS Flex Fund Monitoring Site 2, although it was not surveyed.
2012: Padgett remapped this population in the spring of 2012 as part of the USFWS Flex Fund status survey; individual plants were not counted (Padgett 2012).
2005: 500-750 estimated plants seen on May 2005 (Padgett 2005).
2001: Estimated 700 clumps plus single and double leaves present from the head of the stream to 120-150 yards downstream, plants in leaf and flower on 27 March (Padgett 2001).

Murrays Mill/Upper Balls Creek Natural Area

Survey Site
Catawba River: Murrays Mill/Upper Balls Creek Natural Area (Sub EO of EO 096)
NCDOT B-2119
NCDOT TIP: R-2824

Directions Catawba River: Murrays Mill/Upper Balls Creek Natural Area. Former sub EO 022. This is a sub EO of Parent EO 096 (Wichmann 2005). Near Bridge crossing (B-2119) at Murrays Mill over Balls Creek (SR 1003). Downstream of bridge on slope along east side of stream (Savidge 1994).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2010-09-30

EO Rank Comment

EO Data **2013**: 11,860 plants counted on 29-30 October by NCDOT biologists (NCDOT 2013).
2011: 14,488 plants counted on 5-6 &12-13 December by NCDOT biologists (NCDOT 2011).
2010: Total of 13,062 plants counted by NCDOT biologists on 29 and 30 September 2010 on the Bowman tract and the "original NCDOT site" [see documentation for map] (Herman 2010).
2009: 13,062 plants counted on 29-30 September by NCDOT biologists (NCDOT 2009)
More than 9,000 plants are within construction project area (DOT TIP: B-2119); 356 plants are expected to be impacted by construction activites in 1995; however, 9,000 plants are to be protected on-site in a 25 acre area (Wells 2006).
2004: Approximately 9,000 plants counted in the late fall or early winter 2004 using line transects; this includes the Bowman Tract and Murrays Mill (Wichmann per. com. Jared Gray 2005).
1995-1996: Over 1000 plants observed by Newberry in 1995-1996. Found on both sides of the creek. Extensive population with many large plants. The density is low making estimates of size difficult (Newberry 1996).
1994: Estimated 100-1000 plants in leaf and flower on 11 May, no counts made; multiple-aged stand; widespread throughout slope; widely scattered throughout area (Savidge 1994).

DESCRIPTION

General Description Mesic Oak-Hickory Forest on slope grading into Balls Creek; relatively undisturbed; moist, mid to lower slope, filtered light/shaded with Goodyera pubescens, Kalmia latifolia, and Chimaphila maculata (Savidge 1994).

Min. Elevation 850 **feet** **Max. Elevation** 900 **feet**

EO Observed Area 6.00 **acres**

Rep Accuracy Medium

Separation Comments Located within 2.0 kilometers of sub EOs 038 and 039 and not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: The overall threat from invasive species is low on both Tract 1 and 2. The following invasive species were found throughout Murray's Mill Conservation Area: Elaeagnus umbellata, Ligustrum sinense, Lonicera japonica, Albizia julibrissin, Rosa multiflora (NCDOT 2013).

OWNERSHIP

Managed Areas Murrays Mill Conservation Site
NC Department of Transportation Mitigation Site

Owner Type	Owner Name	Notes
State government	NC DOT	
Private individual		

Owner Comments

Management Comments A conservation/managment plan has been developed (Herman 2010).

Protection Comments NCDOT purchased 24.74 acres on May 1, 1996 and an additional 8.61 acres (Bowman Tract) on March 13, 2006 as a permanent conservation site for the species (Herman 2010). Murrays Mill and Bowman Tract (contiguous) are "going through purchase" by NC DOT - property boundaries will be sent to NHP after survey (Wichmann per. com. with Jared Gray on 6 December 2005). Land in or near this area was purchased as mitigation by NC DOT, details unknown (Wichmann 2005). Land purchased by NC DOT around Murrays Mill to be turned over to the Catawba County Historic Preservation Society (1994).

Additional Topics EO is associated with NC DOT project B-2119. Part of Parent EO 096 having 37,800 plants prior to NCDOT impacts of which 356 plants are to be impacted and 6,000 are to be preserved on-site, as mitigation (HDR personnel 2005). Will be impacted by Bridge replacement (DOT 1994). This bridge project was subject to consultation with USFWS (ASNC log no. 4-2-95-102). The 1995 Biological Opinion (of non-jeopardy) issued by the Service was contingent upon purchase of approximately 29 acres at Murrays Mill for perpetual protection of the species. As of early 2006, NCDOT is working to acquire an additional parcel (the Bowman Tract) which will bring the total to approximately 34 acres in protective ownership (D. Herman, NCDOT, personal communication with C.Wells, USFWS, 8/2006) [C.Wells, 8/2006].

Additional Topics "Site 4 [EO 190] sits within industrial land use zones. Neither indirect effects due to induced development nor cumulative effects are predicted for this site because it is situated in a narrow (400 ft wide) strip of land between the footprint of the proposed US 74 Bypass and CSX rail line. Access into this piece of land will be limited due to the proposed Bypass and existing rail line. However, because this site is situated within 400 ft of the mechanized clearing line, under worst case scenario this entire site may have indirect effects due to competition from invasive species" (Bassette 2003).

SURVEY INFORMATION

EO Rank D - Poor estimated viability **EO Rank Date** 2000-10-27

EO Rank Comment EO rank is based on EO Rank Specs for this species (Wichmann 2005).

EO Data 2014:NCDOT biologists observed plants (no specific population data given) (NCDOT 2015).
2013: The number of plants totaled 283 within the entire site prior to project construction. Of this total, the portion of the site west of the stream contains 193 plants, while the remaining 90 plants are found on the part of the site east of the stream. (Bassette 2015).
2000: Approximately 157 clumps over 0.4 acres counted by Bassette et al. on 27 October 2000 (Bassette 2003).

Source Feature Identifier 29595

Owner Type	Owner Name	Notes
State government	NC Department of Transportation	

Owner Comments

Management Comments As part of its conservation measures to offset the loss of Hexastylis naniflora plants in occupied habitat along TIP No. R-2707 (US 74 Shelby Bypass), the NC Department of Transportation acquired right-of-way to preserve in perpetuity H. naniflora specimens at Site 7 that will remain intact after incurring adverse direct and/or indirect (drainage) effects associated with construction of the Bypass project. This right-of-way that is protected in perpetuity also contains a protective buffer around the limits of the preserved occupied habitat of H. naniflora in order to minimize the potential adverse effects that may otherwise harm the protected site in the future.

Protection Comments Pending NCDOT purchase for right-of-way protection, as of May 2009 (Bassette 2009).

Additional Topics "Site 5: Indirect effects from invasive species, under a worst-case scenario, may impact this site in its entirety. However, whatever portion of this site is not ultimately impacted by indirects effects fall under cumulative effects as a result of the Wal-Mart facility proposed just east of the site south of the proposed Shelby Bypass" (Bassette 2003). Sites 6 and 7:...All 0.0001 ac of Site 6 fall under the projects; construction limits, resulting in a loss of five DFHL plants. Road construction activities will also impact 0.03 ac and 11 DFHL plants at the 0.4 ac Site 7" (Bassette 2003).

General Comments:

OWNERSHIP

Managed Areas NC Department of Transportation Mitigation Site

Owner Type	Owner Name	Notes

Owner Comments

Management Comments Management needs and opportunities include eliminating existing exotic, invasive plant species in and around the site (ROW associated with the Shelby Bypass) and managing the growth and spread of such species in the future. The vine, shrub, and understory vegetative layers may need to be maintained in an open state to reduce the risk that other plant species will outcompete with Hexastylis naniflora plants (Bain in NCDOT 2016).

Protection Comments "NCDOT proposes to protect Site 8 [EO 192] through a conservation easement" (Bassette 2003).

Additional Topics As part of its conservation measures to offset the loss of Hexastylis naniflora plants in occupied habitat along TIP No. R-2707 (US 74 Shelby Bypass), the NC Department of Transportation acquired right-of-way to preserve in perpetuity H. naniflora specimens at Site 8 that will remain intact after construction of the Bypass project. This right-of-way that is protected in perpetuity also contains a protective buffer around the limits of the preserved occupied habitat of H. naniflora in order to minimize the potential adverse effects that may otherwise harm the protected site in the future (Bain in NCDOT 2016). "NCDOT proposes to protect Site 8 [EO 192] through a conservation easement. However, if it is not possible to obtain a conservarion easement, development as a result of the interchange is assumed to impact this site. The entire site falls under an indirect effect because of its close proximity to the proposed Shelby Bypass interchage with NC 226 (Polkville Road)" (Bassette 2003).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 22200

EO Number 193 **Parent EO Number** 217

Additional Topics "NC DOT proposes to protect Site 9 through a conservation easement. However, if it is not possible to obtain a conservation easement, development as a result of the interchange is assumed to imact this site. The entire site falls under and indirect effect because of its close proximity to the proposed Shelby Bypass interchange with NC 226 (Polkville Road)" (Bassette 2003).

Management Comments

Protection Comments Pending NCDOT purchase for right-of-way protection, as of May 2009 (Bassette 2009). "NCDOT proposes to obtain a conservation easment to protect Site 12 [EO 194]" (Bassette et al. 2003).

Additional Topics "The City of Shelby's existing land use plan dipicts this site as part of an undeveloped tract of land. The city's land development plan calls for commercial development at Site 12 [EO 194]. Consequently, the remaining portion of Site 12 [EO 194] will have cumulative impacts associated with the proposed Shelby Bypass. Shelby's future planned growth is assumed to cumulatively impact the rest of Site 12 [EO 194] not already impacted by indirect impacts. However, NCDOT proposes to obtain a conservation easement to protect Site 12 [EO 194]. Also note that portions of Site 10 [EO 194] and Site 11 [EO 194] not impacted by direct construction activities are presumed to be protected by interrelated and interdependent on-site conservation actions" (Bassette 2003). "...Road construction activities will impact 55 DFHL plants and 0.09 ac of the 365 DFHL plants found at the 0.6 ac Site 10. Site 11 will lose 3 plants and 0.01 ac from direct contruction activities" (Bassette 2003).

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes

Owner Comments
Management Comments
Protection Comments NC DOT plans "NCDOT proposes to protect Site 13 [EO 197] trough a conservation easement; if not; presumed to fall entirely under indirect effects of the proposed Shelby Bypass" (Bassette et al. 2003).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 22204

EO Number 197 **Parent EO Number** 216

Additional Topics "NCDOT proposes to protect Site 13 [EO 197] trough a conservation easement. However, if it is not possible to obtain a conservation easement, development as a result of the interchange is assumed to impact the site. Because Site 13 [EO 197] sits within approximately 1,200 ft from the proposed Shelby Bypass's interchange with NC 180 and NC 150 (Cherryville Road), this site is presumed to fall entirely under indirect effects" (Bassette 2003).

DESCRIPTION

General Description Stream banks of an intermittent tributary to Kings Mountain Reservior; partially to completely cleared of hardwood trees; partially covered by downed vegetation from clearing activities (Bassette 2003).

Min. Elevation 850 **feet** **Max. Elevation** 900 **feet**

EO Observed Area 0.12 **acres**

Rep Accuracy Medium

Separation Comments All sub EOs area located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

Directions Buffalo Creek: Potts Creek, tributaries north of I-74, Proposed Shelby Bypass Sites 32, 33, 34, 35. [Note: this occurrence originally had site 36 mapped; this site was subsequently identified as being H. minor. Therefore, source feature corresponding to site 36 was deleted].

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2007-04-27
EO Rank Comment
EO Data J. Wagner et al. observed 50-100 plants on 15 March 2012. Plants in two subpopulations about 100 m apart. Heavily impacted by invasives on southeast facing slope. Hexastylis minor also present (Wagner 2012). 3,572 plants counted at 4 locations by NCDOT biologists on 27 April 2007 (site 34) and 10 April 2007 (sites 32, 33, and 35) (Bassette 2009). 3,522 in 5 groups (sites) over 5.8 acres (Bassette 2003, NCDOT 2008).

Additional Inventory Needed N **Comments**

DESCRIPTION

General Description EO is bisected by a powerline (Wichmann 2005). "Site 32 [EO 208, in part] sits along the hardwood forest stream bank and slopes of three extremely incised intermittent tributaries to Potts Creek...Site 34 [EO 208, in part] is a high quality site with no invasive species, Site 36 [EO 208, in part] is a hgih quality site despites size, lots of invasive kudzu located adjacent to (but not in or ajoining) site (Bassette 2003)."

Min. Elevation 700 **feet** **Max. Elevation** 810 **feet**

EO Observed Area 5.76 **acres**

Rep Accuracy Medium

Separation Comments This EO was not linked with EO 207 (less than 2km away) because the two are separated by a major highway (Robinson 2015).

State government	NC Department of Transportation	

Owner Comments

Management Comments Site to be affected by proposed Shelby bypass. Site will be part of an extended DOT right of way.

Protection Comments Pending NCDOT purchase for right-of-way protection, as of May 2009 (Bassette 2009).

Additional Topics "Construction activities will bisect the site [EO 213], thereby impacting 158 DFHL plants over 0.59 ac situated witin the contruction limits...The remaining part of these sites not impacted by direct construction activities will be protected by interrelated and interdependent on-site conservation actions. Indirect effects from induced development will not occur because the proposed Bypass/SR 2047 (Borders Road) interchage is at a grade. Cumulative effects are not assumed to occur because the existing land use (single family residential) and proposed land development (low density residential) will, in effect, remain the same around Sites 24 and 25 [EO 213, in part] (Bassette 2003).

EO Observed Area acres
Rep Accuracy Medium **Separation Comments** Parent EO 214 consists of sub occurrences along an unnamed tributary to Buffalo Creek below Kings Mountain Lake. Parent EOs 214, 216, and 232 occur in an arc along Kings Mountain Lake and its tributaries, and are located within 2 km of each other in a landscape dissected by roads and scattered development (Amoroso 2015). All sub EOs area located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

DESCRIPTION

General Description Banks of old roadbed cutting through wooded slopes; Associated species include: Rhododendron maximum, Lecothoe fontanesiana, Calycanthus floridus, Pinus strobus, Pyrularia pubera, Trillium catesbaei and Gaultheria procumbens (Franklin and Wichmann 2005).
Min. Elevation 1,160 **feet** **Max. Elevation** 1,190 **feet**
EO Observed Area **acres**
Rep Accuracy High
Separation Comments EO 303 is within 2.0 kilometers of this EO, but is separated by unsuitable habitat (Padgett 2015). EO 303 also has characteristics of both H. naniflora and H.heterophylla. This area may be a hybridization zone, and is therefore kept as a separate EO.

DESCRIPTION

General Description Dense white pine stand, approximately 30 years old. Habitat in this location is severely degraded with very dense shade from the young pines and very suppressed understory. Associated species include Pinus strobus, Cornus florida, Liriodendron tulipifera, Liquidambar styraciflua, Kalmia latifolia, Galax urceolata, Ilex opaca, Polystichum acrostichoides, Quercus alba, Goodyera sp., Sassafras albidum, Mitchella repens, and Cypripedium acaule (Franklin 2006).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 22281

EO Number 222 **Parent EO Number** 226

Min. Elevation 1,150 **feet** **Max. Elevation** 1,210 **feet**

EO Observed Area 5.00 **acres**

Rep Accuracy High

Separation Comments All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: A small portion of this population may have been negatively affected by siltation from a nearby large-scale soil moving project. This problem was quickly discovered by Duke Energy staff, soil deposits were removed, and silt-fencing was installed to prevent further siltation. Likely fewer than 10 plants Hexastylis naniflora plants were affected by this incident (Franklin 2006).

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes
Corporation	Duke Energy	Contact James McCracken, consultant, for access to occurrence.

Owner Comments James McCracken, Devine Tarbell & Associates, Inc., 704.342.7373, James.McRacken@DevineTarbell.com.

Management Comments This population would benefit from thinning of the white pine stand and allowing the natural community to regenerate. The pines are obviously suppressing the population as well as the natural community (Franklin 2006).

Protection Comments Duke Energy has protected this population by placing a conservation buffer surrounding the areas inhabited by Hexastylis naniflora (McCracken pers. comm. to Franklin 2006). It is unknown whether this is a permanently binding agreement and who will hold the easement in the long term.

Survey Site
Lake James, Linville Dam (sub EO of EO 226)

Directions Lake James, north side of Linville River, located south of the Linville Dam and north of powerhouse. This is a sub EO of Parent EO 226.

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2006-10-04

EO Rank Comment EO Rank based on EO Rank Specs for this species and most recent EO data.

EO Data **2005:** 370 plants counted in quick survey by Franklin & Mason on 4 October 2006, at least 500 plants probably present (Franklin 2006).
2002-2003: Approximately 300 plants (Wolfe 2003).

Source Feature Identifier 29799

Source Feature Locator Lake James, north side of Linville River, located south of the Linville Dam and north of powerhouse

Source Feature Descriptor 2006; NCNHP

Peaked Top Rare Plant Site: Catawba River Watershed - Foothills Landfill

Directions Catawba River Watershed: along drainiages to unnamed tributary to Abingdon Creek, approximately 0.5 miles north of Abbington Road (SR 1310), between Grassy knob and Peaked Top at Foothils Landfill (based on shapefiles provided by J. Gay, ESI).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2014-04-19
EO Rank Comment
EO Data Golder Associates collected data between 14-19 April 2014, from 15-0.1 acre monitoring plots during 2014. Plants were decreased to estimated 505 plants per acre, and approximately 16,463 plants within the entire tract (Golder 2014). Numerous plants occurring throughout the site in maturing forest. Vegetative plants were observed on 7-27-2006. (Padgett). Wells reported 30,780 plants were observed by Golder Associates Inc. staff in 2006. Of these, 6,150 were estimated to be impacted by construction activities; 30,780 plants are to be protected on-site in a 260 acre conservation area (Wells 2006). Approximately 28,712 individuals over 32.55 acres, determined by multiplying the average plant desity in plots (822 plants/acre) by the total area occupied (32.55 acres): 1,323 individual plants counted in fifteen 0.1 acre monitoring plots established over 32.55 acres in June 2005 (Golder Associates 2005). 16,000-19,000 clumps in about 33 acres reported by J. Gay et al. in April 2003. Plants in flower; some flowers sent to experts to confirm identification. H. heterophylla may be co-habitating at the same drainages (Gay 2003).

Monitoring Needs Comments Permanent monitoring plots and baseline data established to allow continued monitoring of Hexastylis naniflora (Golder Associates 2005).
Research Needs Comments
Research Needs Comments
Additional Inventory Needed N **Comments**

DESCRIPTION

General Description Young sucessional pine stands at the southern portion of the watershed and a more exposed mixed hardwood sucessional forest at the northern end, invasive exotic species encrouchment not significant (Golder Associates 2005). Twenty of the 33 acres is considered atypical habitat (Gay 2003).
Min. Elevation **feet** **Max. Elevation** **feet**
EO Observed Area 32.55 **acres**
Rep Accuracy High **Separation Comments** EO is more than 2.0 Kilometers from another EO of the same species (Wichmann 2005).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 22306

EO Number 227

General Comments: Specimens collected by Moye in 2007 were sent to L. L. Gaddy for confirmation (Moye & Gaddy correspondence 2007). Specimens sent to and confirmed by both Gaddy and Padgett in 2004 (Padgett 2008).

OWNERSHIP

Managed Areas Foothills Conservancy of North Carolina Easement

Owner Type	Owner Name	Notes
Local government	Caldwell County	Caldwell County Landfill site.

Owner Comments

Management Comments Non-native species will be removed from the property as part of the management plan (Gay 2003).

Protection Comments Foothills Conservancy of North Carolina currently monitors an established easement (Padgett 2008). Area will be placed under a conseravation easement in 2005. No public access to the property (Gay 2003).

Additional Topics Population decline from 2009 to 2014 is believed to be a response to the severe drought that occurred in this region during 2007 and 2008. Predation on the plants, presumably by woodland voles, was also noticed as a continuing phenomenon during this monitoring effort; it is now judged an observable part of the reduction in the population. Four of the plots were impacted by a wildfire during the winter of 2009 and not sampled at that time. Results from the current survey indicate that the fire has reduced growth and vigor for the plants located within these plots. An unusually cold winter and prolonged cool spring has also contributed to lower leaf and flower counts (Golder Associates 2014).

"Republic Services of NC, LLC (Republic) obtained Permit 200231111 from the U. S. Army Corps of Engineers under Section 404 of the Clean Water Act in December 2004 for discharge of fill into wetlands and streams in order to expand the Foothills Solid Waste Landfill in Caldwell County, NC. The expansion will impact sub-populations of Hexastylis naniflora...Republic proposed to mitigate the impacts to H. naniflora by preserving other sub-populations within 260 acres conservation easement on property owned by Caldwell County adjacent to the Foothills Landfill expansion (Golder Associates 2005).

Second Broad River: Hogpen Branch
Hogpen Branch transplant area

Directions Second Broad River: Hogpen Branch. Southern Rutherford County, 1 mile southwest of Henrietta and 3.75 miles east of Harris, NC. EO is located south of Hogpen Branch and north of Ferry Road (SR 2117), along an unnamed tributary (Padgett 2005).

SURVEY INFORMATION

EO Rank C? - Possibly fair estimated viability **EO Rank Date** 2007

EO Rank Comment Part of the population was transplanted from within the impact area of an asphalt and gravel plant to the larger population prior to construction (USFWS 2007). This population is thought to have been moved to a small area on the tract prior to development, but details are unknown (Robinson 2015). EO rank based on EO rank specs written for this species (Padgett 2005).

EO Data Approximately 10% of the plants that were to be impacted from the asphalt plant, and were moved within the larger part of the population (USFWS 2007). Wells reported 500-550 plants in 2006, all of which are expected to be impacted by construction activities. Off-site mitigation is to occur [i.e. the plants are to be moved to a protected area off-site] (Wells 2006 [G06WEL01NCUS]). Estimate 300-400 plants over 0.13 mile along small unnamed tributary of Hogpen Branch (Padgett 2005).

DESCRIPTION

General Description Immediately adjacent to new gravel and aphalt quarry, based on aerial imagery observations (Robinson 2015). Dry-Mesic Oak-Hickory Forest encrouched by invasive species to the south and improved quality to the north. Quercus alba, Lirisdendron tulipifera, Carya tomentosa, and Acer rubrum dominant in the canopy. The understory/shrub layer is sparse with Oxydendrum aboreum, Cornus florida, Nyssa sylvatica, Viburnum nudiflorum, Ilex opaca, and Smilax glauca. The herb layer is sparse throughout with Hypericum sp., sanicula canadense, Passiflora lutea, Desmodium sp., Helianthus sp., Aristolochia serpentaria, Polystichum acrostichoides. Invasive species inlcude: Rosa multiflora, Ligusicum sinense, and Hedera helix. The landscape around this site varies greatly with a cutover to the north and west, a home and numerous invasives to the south (Padgett 2005).

Min. Elevation 787 **feet** **Max. Elevation** 853 **feet**
EO Observed Area 1.32 **acres**

Rep Accuracy High

Separation Comments EO is not located within 2.0 kilometers of another known EO of the same species (Wichmann 2005).

Broad River: Jolly Branch (Sub EO of EO 100).
NCDOT TIP: R-2824
NCDOT TIP: R-2707 US 74 Shelby Bypass

Directions Broad River: Jolly Branch. NC DOT Broad River Tract Sites: Q,R,S,T,U,W,X, and Z. James Padgett's 2001 Sites: R,S,T,U,V,W,X,Y, and Z. This is a sub EO of Parent EO 100 (Wichmann 2005).

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2012-04-01

EO Rank Comment

EO Data **2012:** 2326 plants counted in populations Q, R, S, T, U, W, X, Y, and Z by NCDOT biologists 28, 29 March to 1 April 2012 (Bassette 2015).**2012**: Wagner et al. counted 40 plants on 3 March 2012. Few scattered small plants. Almost no larger plants. None in full bloom. Nice site except for moderate erosion and ice storm damage. (Wagner 2012).**2008:** 1,758 plants counted by NCDOT biologists in April 2008 (Bassette 2009).**2001:** 1,698 plants observed by NC DOT in 2001 (Bassette 2003).

DESCRIPTION

General Description Population EE is dominated by a Mesic Mixed Hardwood Forest (Piedmont Subtype) community on eastern side of Sandy Run Creek. A small steep sided drainage bisects the population area. Plants are located on southwest facing aspects. This low/mid
slope area is well stratified. Kalmia latifolia and Fagus grandiflora are the two dominant plants in this population. Medium quality habitat is present at this location.

DESCRIPTION

General Description Floodplain and Oak-hickory Forest communities along small unnamed tributary of Sandy Run Creeknear the conflunce. Carpinus caroliniana, Smilax ssp., Mitchella reppens, Polysticihium Acrostichoices, Quercus alba, Liriodendron tulipifera, Acer rubrum, and Oxydendrum arboreum (Padgett 2001).

Min. Elevation 680 **feet** **Max. Elevation** 680 **feet**

EO Observed Area **acres**

Rep Accuracy High

Separation Comments All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments:

Site Name

Survey Site
Catawba River: Hoyle Crk-Micol Crk, E bank of Hoyle Creek, East Burke High School Transplant Area (Sub EO of EO 178)

Directions Catawba River: Hoyle Crk-Micol Crk, east bank of Hoyle Creek located just south of Catawba River. This is the "upland" relocation site referred to by Boaze (2008). This is a sub EO of Parent EO 178.

SURVEY INFORMATION

EO Rank D? - Possibly poor estimated viability **EO Rank Date** 2010-05-26

EO Rank Comment Appears area surrounding occurrence was disturbed in the past, based on 1998 aerial photos. This assumption was used in assigning the rank. Because a description of habitat was not reported, the rank should be refined as additional information becomes available. Rank specs followed: less than 200 clumps occurring in less than one acre of high quality forest or on land impacted by human disturbance such as logging, grazing, mowing, etc. (Mason 2006).

EO Data **Monitoring data - 2010:** Total of 168+ plants: 44 resident (37 alive with leaves + 7 alive without leaves) and 124 relocated (87 alive + 37 alive without leaves) plants observed at this site by Boaze on 26 May 2010. Many unflagged plants were also present (Boaze 2010).

2009: Total of 173+ plants: 48 resident (42 alive with leaves + 6 alive without leaves) and 125 relocated (97 alive + 28 alive without leaves) plants observed at this site by Boaze on 01 June 2009. Eight of the relocated plants appeared to have reproduced with rhizomes; many unflagged plants were also present (Boaze 2009).

2008: Total of 174 plants: 49 resident (44 alive + 5 alive without leaves) and 125 relocated (108 alive + 17 alive without leaves) plants observed at this site by Boaze in May 2008. No flowers present (Boaze 2008).

2007: 52 resident plants observed at this site by Boaze in May 2007 [no report on the number of relocated plants still alive] (Boaze 2008).

2006: Total of 190 plants: 59 resident and 131 relocated plants observed at this site by Boaze in July 2006. No flowers present (Boaze 2008). A total of 515 plants, scattered between EOs 254, 255, 256 [all located at the Burke County School Site] were located in the construction project area and were expected to be impacted by improvement activities. Of these, 286 were moved to a 6.1 acre protected area on-site in 2006 (Wells 2006 in G06WEL01NCUS). 186 plants observed by Boaze in June 2006 (Boaze, 2006) [C. Wells, FWS copy of Management Plan.]

SURVEY INFORMATION

EO Rank C? - Possibly fair estimated viability **EO Rank Date** 2010-05-26

EO Rank Comment Appears area surrounding occurrence was disturbed in the past, based on 1998 aerial photos. This assumption was used in assigning the rank. Because a description of habitat was not reported, the rank should be refined as additional information becomes available. Rank specs followed: 200- 500 clumps occurring in less than one acre of high quality forest or on land impacted by human disturbance such as logging, grazing, mowing, etc. (Mason 2006).

EO Data **Monitoring data - 2010:** Total of 376 flagged plants: 227 resident (193 alive + 34 alive without leaves) and 149 relocated (116 alive + 33 alive without leaves) plants observed at this site by Boaze on 26 May 2010. A considerable number of unflagged/not monitored plants are present in this area (Boaze 2010).
2009: Monitoring data - Total of 341 plants: 191 resident (161 alive + 30 alive without leaves) and 150 relocated (126 alive + 24 alive without leaves) plants observed at this site by Boaze on 01 June 2009. A considerable number of unflagged/not monitored plants are present in this area (Boaze 2009). **2008:** Monitoring data - Total of 379 plants: 229 resident (207 alive + 22 alive without leaves) and 150 relocated (128 alive + 22 alive without leaves) plants observed at this site by Boaze in May 2008. No flowers present (Boaze 2008).
2006: Total of 415 plants: 265 resident and 150 relocated plants observed at this site by Boaze in July 2006. No flowers present (Boaze 2008). A total of 515 plants, scattered between EOs 254, 255, 256 [all located at the Burke County School Site] were located in the construction project area and were expected to be impacted by improvement activities. Of these, 286 were moved to a 6.1 acre protected area on-site in 2006 (Wells 2006 in G06WEL01NCUS). 210 plants observed in June 2006 (Boaze, 2006) [C. Wells, FWS copy of Management Plan].

Source Feature Identifier 30548

Source Feature Locator Hoyle Crk-Micol Crk, tributary just east of Hoyle Creek, riparian relocation site

Source Feature Descriptor 2005; USFWS

Surveyors Pam Boaze, Fish and Wildlife Associates, Inc. **Survey Type**

Survey Date 2010-05-26 **First Observation Date** 2006-06 **Last Observation Date** 2010-05-26

Data Sensitive Element N **Comments**

Monitoring Needs Comments Site is subject to permanent protection agreement with Burke County and Burke County Public Schools System. Fish and Wildlife Associates are to monitor first two of five years, and train representative from School System to monitor consistent with their methods in years 3-5. [C. Wells, USFWS, notes from files. Impacts discussed further in FWS consultation files, reference log number 4-2-06-020.]

DESCRIPTION

General Description

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 22493

EO Number 256 **Parent EO Number** 178

Min. Elevation feet **Max. Elevation** feet

EO Observed Area acres

Rep Accuracy High

Separation Comments Located east of Sub EO 254 and Sub EO 255; All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.

General Comments: There seem to be two species of Hexastylis present at this site, based on leaf appearance; however, positive identification has not been possible because the plants have not flowered during the monitoring years (Boaze 2008).

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes

Owner Comments Owned by the County (Burke County School System).

Management Comments Site is subject to permanent protection agreement with Burke County and Burke County Public Schools System, which is the entity charged with future management requirements at this site. Fish and Wildlife Associates Has produced a management plan for this site, persuant to the USFWS consultation which authorized impacts in this area. NC NHP was to receive a copy of this management plan [C. Wells, USFWS, notes from files. Impacts discussed further in FWS consultation files, reference log number 4-2-06-020.]

Protection Comments Plants are located within a permanent conservation easement (Boaze 2008).

Lincoln-Lincoln County Airport and Leepers Creek, Airport Runway 05 (Sub EO of EO 261)

Directions Lincolnton-Lincoln County Airport: Sub EO of Parent EO 261. Near displaced threshold area of Runway 05 (southwest end of runway). The occurrence is to the west of the end of Runway 05 and west of Airport Road (SR 1750), in a wooded area approximately 0.10 miles from end of the runway pavement and extends west. The occurrences are in 'Study Area 2' of Figure 1 on page 12 of the 2006 Biological Opinion (Cole, 2006; Wells, 2006).

SURVEY INFORMATION

EO Rank B - Good estimated viability **EO Rank Date** 2006-06-15

EO Rank Comment Rank specs followed: more than 500 clumps occurring in less than one acre of high quality forest or on land impacted by human disturbance such as logging, grazing, mowing, etc. (Mason 2006).

EO Data **2006:** Daves reported that on 18 and 19 October 2006 the 675 plants to be impacted were moved to the Rhyne Conservation Preserve [see EO 260] (Daves 2006). Wells observed the groups of plants in the Action Area on 15 June 2006; no data reported (Wells 2006). 1,246 individual plants, in 7 groups [Group A: 20 plants, Group B: 50 plants, Group C: 61 plants, Group D: 126 plants, Group E: 243 plants, Group F: 343 plants, Group G: 403 plants], were observed in March and April 2006 by S&ME staff within the "Action Area", also referred to as "Study Area 2". Of these, 675 plants are within the footprint of proposed the clearing and grubbing activities, which include all of groups A, B, and C and a portion of groups D, E, and F [see map in Wells (2006) G06WEL02NCUS]. These plants are expected to be moved to Rhyne Conservation area (Wells 2006 in G06WEL02NCUS, Daves 2006).

2005: Daves, McRae, and Beckstrom first observed the occurrence in October and November 2005 (Cole 2006, Wells 2006).

General Comments:

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes
Private organization	Lincolnton-Lincoln County Airport	

Owner Comments

Management Comments Following the removal of the trees and shrubs, the ceared areas are to be maintained ans grassed fields, rendering the habitat unsuitable for Hexastylis naniflora (Wells 2006).

Protection Comments These plants do not occur in an area that is currently protected. The Airport is proposing to relocation the affected plants only to an off-site conservation area (Rhyne Conservation Area; 15 miles to the southwest of the Airport), where a conservation easement is currently held by Catawba Lands Conservancy (Wells 2006).

Additional Topics Indirect effects to the remaining plants include increased sunlight to the plants in areas adjacent to areas that are cleared and grubbed. This is expected to result in altered habitat conditions at the immediate edge of the tree line, making the area less hospitable to this species. Construction and maintenance of the existing Airport approach has also resulted in an influx of invasive species, which will likely result in additional loss of plants (Wells 2006).

Rhyne Conservation Preserve

Survey Site
South Fork Catawba River, Rhyne Conservation Preserve (Sub EO of EO 302)
Rhyne Preserve Transplants
USFWS Flex Fund Monitoring Site 1

Directions South Fork Catawba River, Rhyne Conservation Preserve: Five locations along the South Fork Catawba River and surrounding Southside N.C., on north-facing slope just south of an unnamed tributary of the South Fork Catawba River.
Location 1: North of a sharp right angle curve in the South Fork Catawba River and north of South Fork Road (SR 1248), within drainages approximately 0.1 mile north of the River.
Location 2: West of the South Fork Catawba River, along north facing slopes immediately south of South Fork Road (SR 1248).
Location 3: Small patch immediately northeast of the bridge of South Fork Road, east of the South Fork Catawba River.
Location 4: East of South Fork Catawba River and along drainages immediately east of South Fork Road (SR 1248).
Location 5: "South of abandoned mill, just south of Charlottes Lane; park at gate walk on paved road toward old mill (right fork). Then turn down old unpaved road bed (RR tracks on topo map). Cross stream on old bridge, plant occur on north facing slope east of bridge and west of the dam" (Franklin and Wichmann 2005), and extending upstream along the south side of the unnamed tributary approximatly 0.35 miles.

SURVEY INFORMATION

EO Rank A - Excellent estimated viability **EO Rank Date** 2016-05-05

EO Rank Comment Rank is based on all known locations (2016). >10,000 plants estimated to occur across all locations (2016). Rank specs followed: more than 500 clumps (rosettes) occurring in greater than one acre of high quality forest such as Dry-Mesic Oak Hickory Forest or Mesic Mixed Hardwood Forest. The high rank of this EO is based on the transplanted population (Mason 2006).

EO Data **2016**: 1,329 plants counted by Bloom on 5 May 2016 in 1.5 acres of monitoring plots. Estimated 19,873 total plants across 22.43 acres (Bloom 2016).

2015: 1,543 plants counted by Padgett and Feldman on 19 May 2015 in 1.5 acres of monitoring plots. Estimated 22,847 total plants covering the entire 22.21 acres (all 5 locations) (Padgett and Feldman 2015).

2014: 1,690 plants counted on 29 May 2014 in 1.5 acres of monitoring plots. Estimated 25,000 total plants covering the entire 22.21 acres (all 5 locations) (Padgett 2014).

2013: 1,492 plants counted from three permanent monitoring plots with the population. Population mapped to be 22.21 acres total with an estimated 22,000+ plants on the site on 19 July 2013 (Padgett 2013).

2012: 1,378 plants counted from three permanent plots for estimate of 20,404 plants scattered across 22.21 acres within the whole site on 18 July 2012 (Padgett 2012). Site remapped in May of 2012 (Padgett 2013).

2006: Daves reported that 675 plants were moved from the Lincolnton-Lincoln County Airport to a plot within the Rhyne Preserve on 18 and 19 October 2006 (Daves 2006). Reintroduction plot is a separate source feature within Location 5, south of the unnamed Tributary, east of the South Fork River (Robinson 2014).

2005: Estimate 70-100; 59 plants counted, 5 flowering 11 May 2005, along north facing slopes, south of an unnamed tributary to South Fork Catawba River (Location 5) (Franklin and Wichmann 2005).

2002: Present on 5 April 2000 (Matthews et al 2002).

DESCRIPTION

General Description Chestnut Oak Forest (Dry Heath Subtype) and Piedmont Monadnock Forest (Typic Subtype) (Bloom 2016).

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 24218

EO Number 262 **Parent EO Number** 302

Min. Elevation feet **Max. Elevation** feet

EO Observed Area 19.31 **acres**

Rep Accuracy High

Separation Comments Sub EOs are within 2km of each other and are not separated by 1km of unsuitable habitat. The principal EO is greater than 3km from other conspecific principal EOs (Mason 2006).

General Comments: Observed threats: Public Access Trail (South Fork Rail Trail) allows the public access to a small population (Plot #2). Threat: High / Scope: Low / Immediacy: High (Bloom 2016).
In 2006 plants were transplanted to Location 5 from the Lincoln County airport population (see parent EO 261). Transplanted to a north-facing slope in natural habitat. Daves noted that the transplanted plants were moved to an area distinct from the naturally occurring population and could be monitored separately (pers. comm. to S. Mason, 10 October 2006). The transplant plot is indicated with a separate source feature within the EO.

DESCRIPTION

General Description Mature forests. There are lots of Liriodendron tulipifera coming up in the mix, with Quercus alba, Q. rubra, Q. coccinea, Carya alba, and Carya glabra. Acer rubrum and Oxydendrum arboreum are common. Shrubs are abundent along the steep slopes of the streams with Kalmia latifolia very common. Herbs are sparse due to the thick regrowth of canopy species. Galax, Chimaphilia maculata and Hypoxis hirsuta are common (Padgett 2008).

Northern Catawba County - Catawba River: Unnanmed tributary to Falling Creek (Sub EO of EO 316)

Directions Catawba River: Unnanmed tributary to Falling Creek: Unnamed tributary to Falling Creek, north of Hickory, Catawba County. On the property owner, Mr. Raymond von Drehle. Four patches occur on the south side of the UT on the north-facing slopes and the other two patches are on the north side of the UT in a small forested area adjacent to maintained lawn (Cole 2007).

SURVEY INFORMATION

EO Rank C - Fair estimated viability **EO Rank Date** 2006-09

EO Rank Comment

EO Data 2006: 530 plants total found in six discrete patches on the property by E'nV biologists in September 2006; the Biological Assessment concluded the the impoundment would impact 130 plants (24% of the plants on the property) by construction of the pond and subsequent inundation; about 362 plants in 2.1 acres are expected to remain after the project is completed; a portion of the plants at the four patches on the south side of the tributary will be impacted by the project and none of the plants at the two patches on the north side will be impacted (Cole 2007).

Scientific Name *Hexastylis naniflora* **EO ID** 25718

EO Number 273 **Parent EO Number** 316

Protection Comments The property owner proposed to preserve the remaining dwarf-flowered heartleafby placing a deed restriction on the site. The deed restriction will result in the preservation of 2.1 acres of dwarf-flowered heartleafhabitat and will protect about 362 individual dwarf-flowered heartleaf plants (Cole 2007).

SURVEY INFORMATION

EO Rank A? - Possibly excellent estimated viability **EO Rank Date** 2008-03-24
EO Rank Comment The rank may be lowered or raised once the plants have been censused. 2012 data not counted towards EO rank because entire population may not have been censused (Robinson 2015).
EO Data Wagner et. al. counted 100 plants on 3 March 2012; there were a lot of buds but no plants in full bloom; many small H. naniflora plants (1-3 leaves) and few larger plants (Wagner 2012). Plants observed by Jones in January, April, and June 2009; no count made (Jones 2009). Several hundred plants (may be upwards of 750-1000 plants) along stream corridors of unnamed stream and adjacent north-facing slopes. In flower and bud on 17 March 2008 (Padgett 2008).

DESCRIPTION

General Description Dry-Mesic Oak-Hickory Forest and Mesic Mixed Hardwoods. Canopy species are Quercus alba, Q. coccinea, Q. falcata, Carya glabra, C. alba, Liriodendron tulipifera, and Fagus grandifolia. The understory consists of Acer rubrum, Cornus florida, Oxydendrum, and Ilex opaca. Shrubs are common and thick in palces with Kalmia latifolia and Rhododendron maximum present. Other shrubs include Vaccinium spp., and Euoynmus maericanus. Vines are present as Smilax spp., and Begnonia caprolata. Herbs include Hexastylis naniflora, Chimaphilia maculata, Galax urecolata, Hepatica maculata, and Mitchella repens.

Min. Elevation 640 **feet** **Max. Elevation** 710 **feet**
EO Observed Area 7.30 **acres**
Rep Accuracy High **Separation Comments**
General Comments: NCPCP issued permit ID #139 to Matthew Jones (Garner-Webb University) to allow for activities proposed in his pollination study proposal including covering flowers and collecting flowers and seeds from this occurrence. Permit expires 31 December 2009 [permit attached to EO 100] (NCPCP 2009).

DESCRIPTION

General Description Majority of site occurs in a Piedmont/Coastal Plain Heath Bluff (high quality); some of the site occurs in a Mesic Mixed Hardwood Forest (Piedmont subtype) (high quality). Soils on most of the site are mapped as LuF (Louisburg and Louisa soils, 25-55% slopes); very southern and eastern fringes are mapped as CsE2 (Cecil soils, 15-25% slopes, eroded).
Associated species*:* Fagus grandifolia, Quercus alba, Quercus rubra, Quercus falcate, Liquidambar styraciflua, Acer rubrum,
Oxydendrum arboretum, Carpinus caroliniana, Cornus florida, Hammamelis virginiana, Kalmia latifolia, Halesia Carolina,

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 26004

EO Number 275

Leucothoe fontanesiana, Viburnum acerifolium, Smilax spp., Vaccinium vacillans, Vitis rotundifolia, Hexastylis arifolia, Polystichum acrostichoides, Tipularia discolor, Asplenium platyneuron (Renninger 2010).
High quality Piedmont/Coastal Plain Heath Bluff and high quality Mesic Mixed Hardwood Forest (Piedmont subtype). Associated NC watch list species include: Trillium catesbaei and Nestronia umbellula. Population extends from top of stream bank to near crest with most individuals occuring on the midslope. Moisture regime is well-drained, moist, to mesic. Canopy cover is approximately 50% with a prevalence of understory trees and shrubs (Bassette 2007).

Min. Elevation 700 **feet** **Max. Elevation** 900 **feet**

EO Observed Area 0.35 **acres**

Rep Accuracy High

Separation Comments EO is not located within 2.0 kilometers of another known EO of the same species

EO Rank Comment

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 26982

EO Number 276

EO Data **2016**: Bloom counted 2,458 plants on June 9 and 20, 2016 in 1.9 acres of monitoring plots (the southern-most plot was not counted in 2016). Estimated 39,535 total plants covering the entire 30.5 acre population (Bloom 2016).
2015: Padgett counted 2943 plants on 27 May 2015 in 2.86 acres of monitoring plots. Estimated 33,559 total plants covering the entire 30.56 acres (Padgett 2015).
2014 : 2866 plants observed in permanent monitoring plots by Padgett on 6 and 11 June 2014, estimated 32681 total plants covering 30.56 acres (Padgett 2014).
2013: 2909 plants observed in permanent monitoring plots by Padgett and Israel on 8 May 2013, estimated 33,171 total plants covering 30.56 acres (Padgett 2013).
2012: Padgett counted 2287 plants in permenant monitoring plots. Total population estimate is 26000+ plants (Padgett 2012).
Pre 2012: Based on surveys conducted between 2005-2008, Siler estimates that there are at least 5,500 plants spread throughout the property. This number includes those east of Suck Creek, in the ash pond project area (Siler 2009).
McCombs Road/Broad River:
2009: USFWS and Environmental Resources observed 3,150+ plants in this action area in 2009: 3000+ in the area west of the proposed switching station on the west side of McCombs Road and about 150 plants east of the transmission line corridor on the Broad River. Four plants near the switching station site will be impacted by its construction; these are to be relocated to a site elsewhere within the population (USFWS 2009).
East of Suck Creek:
2011: 65 plants total (plot A=15 plants; C=18 plants; D=27 plants; F=5 plants) observed by Siler in the four circular plots on 28 September 2011. Comparing October 2010 numbers to September 2011 numbers, the data indicates 115% survival in plot A; 86% survival in plot B; 73% in plot C; and 71% in plot F (Siler 2011).
2010: 78 plants total (plot A=13 plants; C=21 plants; D=37 plants; F=7 plants) observed by Siler in the four circular plots on 01 October 2010. Comparing October 2009 numbers to October 2010 numbers, the data indicates 62% survival in plot A; 110% survival in plot B; 69% in plot C; and 100% in plot F (Siler 2010).
2009: On 04 April 2009, four 3 sqm circular plots were established by Environmental Resources staff in order to monitor the relocated plants. A total of 101 plants (plot A=21 plants; C=19 plants; D=54 plants; F=7 plants) were observed by Siler in the plots on 07 October 2009; a total of 79 plants (plot A=18 plants; C=19 plants; D=30 plants; F=12 plants) were observed by Siler in the plots on 04 April 2009 (Siler 2009).
2008: On 06 June 2008, Siler observed 136 plants from those moved in September 2007 survived - 81% survival with some resprouting from previously reported dead plants. On 04 June 2008, Siler observed 772 plants of the 908 plants moved in December 2007 survived - 90% survival; many plants flowering (Siler 2011). Environmental Resources staff observed in the spring of 2008 that 189 of the transplants did not survive. Therefore, the total number of plants now protected in the "action area" was estimated to be 1,111 (USFWS 2008).
2007: Siler observed on 03 November 2007 that 121 of the 168 plants moved in September 2007 survived - 72% survival (Siler 2011). 1,097 plants were relocated to 5+ feet upslope from the historic full-pool elevation: 168 plants on 06 & 07 September 2007, 21 plants on 03 November 2007, and 908 plants on 03 & 07 December 2007 (USFWS 2008). Approximately 1,300 plants were observed in the "action area" by Environmental Resources staff sometime before 10 August 2007 (USFWS 2008).

General Comments:

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes
Corporation	Duke Energy	2012, 2015, 2016 permission granted

Owner Comments Duke Energy contact is Steve Hodges and James Padgett spoke with him on 2016-03-17.
Management Comments
Protection Comments Duke Energy proposed posting signs in the area where the plants were relocated. However, this is not permanent protection because Duke Energy is conducting extensive planning for the installation of scrubbers, expansion of generation, and retirement of older units; therefore, Duke Energy requires the option of using the land where the plants are located for these purposes (USFWS 2008).
Additional Topics Plants were impacted by the raising of the ash pond water levels. The plants were not discovered until after temporary innundation but most did not survive this event. Additionally, about 17% of the plants did not survive the relocation, which done to avoid innundating them. The population may still be impacted by expansion activities at this facility (2008).

The property is located on the north side of SR-1465 (11 Avenue SE) just east of Hickory; two subpopulations are located in the ravine located near the middle of the property: East subpopulation is located just east of the powerline corridor and downslope of the Temporary Access Road, near [redacted] West subpopulation is located on the west side of the powerline corridor, immedately downslope of where the Access Road comes off the corridor, near [redacted] (Matthews 2009).

SURVEY INFORMATION

EO Rank D - Poor estimated viability **EO Rank Date** 2011-11-04
EO Rank Comment
EO Data 132 plants dug by HARP [from the west occurrence] on 04 November 2011 and relocated to EO 294 (Bud Geitner Park); relocation occurred to permit expansion at the quarry [see 'Additonal Topics']; Matthews reported that, as far as any plants remaining at this location, "I am satisfied we got what was there"; if the quarry is developed, any remaining plants will be extirpated (HARP 2011, Matthews 2012). Total of 82 plants observed at two locations by Matthews and Gaffney on 03 April 2009: East subpopulation - 18 plants in an area of 50x40 feet; West subpopulation - 64 plants in flower over 100 square feet (Matthews 2009).

Additional Topics Relocation of plants from this occurrence occurred to permit expansion at the quary. At the request of Martin Marietta, negotiations were held with USFWS regarding the potential for transplanting the population. This action was approved verbally by USFWS on 23 May 2011 (HARP 2011). "The proposed location of CMP #1 and Basins #7 and #8 can impact [the west subpopulation] of plants...There is no proposed developmental impact for [the east subpopulation] of plants" (Matthews 2009).

DESCRIPTION

General Description Roadside embankment, telephone utility line easement, and inside adjacent tree line. Maintained/disturbed and Mesic Mixed Hardwood Forest community types (Bassette 2009).
Min. Elevation feet **Max. Elevation** feet
EO Observed Area acres
Rep Accuracy High **Separation Comments** Sub EO 161 is located 0.03 km to the southeast; All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide. Parent EO178 is approximately 1.5 air kilometers from EO 029, however the occurrences are separated by unsuitable habitat (ridge and town) greater than 1 kilometer wide and are therefore separate records (Wichmann and Franklin 2005). See map for details.

General Comments: Dennis Herman (NCDOT) and Heather Renninger (NCDOT) visted this site on 07 April 2009 to confirm the identity of the Hexastylis individuals. Flower morphology was examined in over 50 randomly selected plants and all were consistent H. naniflora characteristics. No evidence of other Hexastylis species was found at this site (Bassette 2009).

Management Comments

Protection Comments Protection of NCDOT ROW is occurring through fee simple acquision; this is currently in progress as of May 2009 (Bassette 2009).

Additional Topics Project let date is 15 June 2010. NCDOT is working to secure a conservation easement on the portion of this site that remains intact after the construction; as of 20 January 2010, the easement had not been secured. If the easement cannot be secured, NCDOT biologists will remove the 67 plants and hold them until it can or hold until another suitable site is acquired (Bassette 2010). NCDOT project construction (R-2824) will incur adverse effects (direct and indirect impacts) to 0.1275 acre of the 0.16 acre population, cause an anticipated loss of 73 of 126 plants. Prior to construction, NCDOT biologists will remove the 67 plants that will be directly impacted to areas within the same site that will not be impacted [the easement area]. Monitoring will take place every two years of a six year period after construction activities area completed (Bassette 2009).

Additional Topics "Plants from each EO were placed into circular plots. Plots were chosen by locating areas near but not including resident [plants]. EO's were not mixed within a plot. The location of each plot was GPS'ed and plot size, EO, and total number of plants in the plot was recorded. A metal stake with metal label was installed in the center of each plot. Average planting density was about 4 plants per meter. We [NCDOT] required 23 plots to accomodate all the plants. Plenty of room for additional plots at this site. Approximately 96 person-hours were spent in the transplant effort" (Fontaine 2010).

DESCRIPTION

General Description Moist, NE-facing bluff and streamside seepy areas in Mesic Mixed Hardwood Forest. Abundance is highest on the edges of small depressions (microtopography) and on relatively flat but well-drained areas next to the small stream channel. Abundance decreases with distance from the stream channel. The species is generally absent from a patch of Piedmont Heath Bluff dominated by Kalmia latifolia that occurs along the stream between the two mapped polygons. The forest is recovering from previous cutting, as evidenced by abundance of Liriodendron tulipifera in the canopy and average canopy tree diameter of approximately 10-12 inches. Habitat quality is excellent (Tuttle 2016).
This area is characteristic of a Dry-Mesic Oak-Hickory Forest, and consists of a maturing canopy and a lush understory of trees, shrubs, and herbaceous plants. This area also contains two tributaries to White Oak Creek. The first tributary flows north/northwest through the Property for approximately 2,506 feet; an approximately four acre lake is formed by this tributary. The second tributary flows north/northwest along the northeastern property line for approximately 1,337 feet...There is an approximately 15 acre Open Field within this area that is mostly grassy area and occasionally mowed. There are several trails, maintained by the Foothills Equestrian Trails Association, that traverse this area." See Torlina (2009) for a partial species list from the property.

DESCRIPTION

General Description **Supopulation A:** North-facing slope; plants mid-slope, some stream bank; moist, well drained site. Mesic Mixed Hardwood Forest (Piendmont subtype) - medim quality; Pacolet soils.Associated species: Fraxinus americana, spotted wintergreen, Polystichum acrostichoides, Asplenium platyneuron, Quercus falcata, Smilax rotundifolia, Liriodendron tulipifera, Quercus alba, Pinus strobus, Carpinus caroliniana, Ilex opaca, Cornus florida, Rhododendron maximum, Prunus serotina, cranefly orchid, Viola spp., Rubus argutus, Acer rubrum, Oxydendrum arboreum, Pinus virginiana, Tsuga canadensis (Bassette 2007).**Subpopulation B:** Mid-slope, dry, closed canopy. Mesic Mixed Hardwood Forest (Piendmont subtype) - disturbed, medim quality; Pacolet soils. Associate species: Quercus alba, Quercus rubra, Carya tomentosa, Fagus grandifolia, Pinus strobus, Rhododendron maximum, Ilex opaca, Lycopodium sp., Polystichum acrostichoides, Chimaphila maculata (Renninger 2010).**Subpopulation C:** North-facing slope in sewer easement next to unnamed tributary of Gunpowder Creek. Steep slope adjacent to stream. Pacolet soils. Associated species primarily tulip poplar with a mix of white pine, red maple, American holley, privet, poison ivy, and Japanese honeysuckle (Renninger 2010).**Sites 22A, 24:** Wooded areas with the NC 143 study area are fragmented by heavy human alteration and are best described as Mesic mixed Hardwood Forests, occurring on Congaree fine sandy loam soils. Associated species: Liriodendron tulipifera, Pinus virginiana, Carpinus caroliniana, Lonicera japonica, Ligustrum sinense, Smilax rotundifolia, Ilex opaca, Polystichum acrostichoides, Viola sp. (Dustin field form in NCDOT 2018).**Site 26:** This site is contained within a utility easement and would be classified as disturbed maintained. The soils are classified as Cecil-Urban land complex. Associated species: Liriodendron tulipifera (saplings), Pinus virginiana (saplings), Carpinus caroliniana, Lonicera japonica, Ligustrum sinense, Smilax rotundifolia, Ilex opaca, Polystichum acrostichoides, Rubus argutus

Data Sensitive Element N **Comments**
Monitoring Needs Comments
Research Needs Comments
Research Needs Comments
Additional Inventory Needed N **Comments** This occurrence has some charactistics of both Hexastylis naniflora and Hexastylis heterophylla. This area may be a hybridization zone. All know occurrences in the region have all been mapped as H. naniflora (Padgett 2015).

DESCRIPTION

General Description Oak hickory forest with a high percentage of pines (mostly white pines) present. The plants occur on north-facing slopes and along both sides of the river. Plants occur in both areas with mountain laurel present and in more open understory with a rich and diverse herbaceous layer present.
Min. Elevation 1,090 **feet** **Max. Elevation** 1,300 **feet**
EO Observed Area 9.20 **acres**
Rep Accuracy High **Separation Comments** This occurrence is a separate EO from 219, located approximately 1100 meters to the south west due to some unsuitable habitat (Padgett 2015). This population is also a possible hybrid and EO 219 is not documented to show evidence of hybridization, therefore kept as a separate EO (Robinson 2015).

Additional Topics A PCP permit was submitted during summer 2015 to rescue and move plants to the Broad River Greenway, many miles away. A solution was found to tranplant plants within the property, near an existing Hexastylis naniflora population, which precluded the need for a state permit (Mara Alexander 2015).

Site Name

Survey Site
Glade Creek, Alexander County
NCDOT TIP No. B-5391

Directions Alexander County, along Glade Creek, near the DOT Bridge #139 on County Home Road (SR 1609), approximately 0.8 miles northeast of Millersville, NC in south-central Alexander County (Smith 2014).

SURVEY INFORMATION

EO Rank C - Fair estimated viability **EO Rank Date** 2017-03-07

EO Rank Comment Rank specs followed: "Populations in disturbed habitat are considered at risk, with relatively poor viability (C or D)." C-rank given due to high number of individuals (Mason 2017).

EO Data See Additional Topics for information regarding impacts to this occurrence due to bridge replacement. **2017:** Estimated 2,456 H. naniflora individuals counted over 2.57 acres at 7 locations (sites 5 and 6 have been combined) on 27 February and 01 and 07 March 2017 by Axiom Environmental biologists: Site 1: 81 individuals in 0.4 acres; Site 2: 154 individuals in 0.16 acres; Site 3: 76 individuals in 0.07 acres; Site 4: 55 individuals in 0.04 acres; Site 5/6: 1,973 individuals in 2.17 acres; Site 7: 41 indivuals in 0.03 acres; Site 8: 76 indivuals in 0.06 acres. Note that a total of 4,912 individuals of Hexastylis species were counted and 50% assumed to be H. nanilfora (NCDOT 2017 Biological Assessment). **2015:** In May 2015, Axiom Environmental biologists did not observe any indiviudals within the disturbed portion of Site 5 (NCDOT 2017 Biological Assessement). Axiom Environmental biologists observed significant damage and disturbance to Site 5 (the large central part of the population) on 27 March 2015. Approximately 75-95% of plants in site 5 appear to be covered by debris or destroyed by clearing and construction of an access road to the floodplain of Glade Creek (Axiom Environmental 2015). **2014:** Estimated 1,366 H. naniflora plants counted over 2.45 acres by Smith, Davis, Jernigan, and Perkinson on 04 August 2014 in 8 separate locations: Site 1: 77 individuals in 0.4 acres; Site 2: 128 individuals in 0.16 acres; Site 3: 74 individuals in 0.07 acres; Site 4: 50 individuals in 0.04 acres; Site 5: 947 individuals in 2.08 acres; Site 6: No information provided; Site 7: 38 indivuals in 0.02 acres; Site 8: 49 indivuals in 0.04 acres. Note that a total of 2,732 individuals of Hexastylis species counted and 50% assumed to be H. nanilfora (Smith 2014, NCDOT 2017 Biological Assessment). **2013:** Plants observed [no count reported] by Axiom Environmental biologists at 8 locations occupying 1.81 acres on 10 April 2013 (NCDOT 2017 Biological Assessment).

DESCRIPTION

General Description Site 1: Soils are mapped Fairview sandy loam, 15 to 25 percent slopes. Natural Communities occupied by this site include Mesic Mixed Hardwood Forest: Piedmont Subtype and disturbed/maintained land - most Hexastylis plants occur within 30 feet of the roadside wood-line. The Mesic Mixed Hardwood Forest provides medium quality habitat (generally appropriate vegetation, though of somewhat low diversity, some soils are disturbed from road installation), and maintained/disturbed land provides excessive sunlight and disturbed soils, providing low quality habitat. Associated species: Forest- Canopy: Fagus grandifolia, Quercus alba; Sub-canopy: Oxydendron arboreum, Carpinus caroliniana, Kalmia latifolia, Acer rubrum; Shrub: C. caroliniana, O. arboreum. Herb/vine: Smilax rotundifolia, Toxicodendron radicans, Viola hastate, Hexastylis heterophylla; Roadside- O. arboreum, C. caroliniana, S. rotundifolia (Smith 2014).

Min. Elevation 3,232 **feet** **Max. Elevation** **feet**
EO Observed Area 6.70 **acres**
Rep Accuracy High **Separation Comments**
General Comments: Hexastylis heterophylla co-occurs with H. naniflora at this location.

OWNERSHIP

Managed Areas

Owner Type	Owner Name	Notes
Private individual	J.B Cox & T.M. Cox, 1886 County Home Road, Taylorsville, NC	

Owner Comments Plants fall partially on DOT right-of-way and private ownership (Cox property).
Management Comments
Protection Comments This population was significantly damaged in early 2015 or late 2014 by the construction of an access road going through the largest part of the population (Axiom Environmental 2015).
Protection / management needs and opportunities: A narrow stretch of natural forest is bounded to each side by maintained road shoulder/utility line right-of-way and a residential yard.

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 36541

EO Number 308

Additional Topics Total adverse effects expected to occur to this occurrence in association with NCDOT TIP No. B-5391 along Alternative 1 are: 131 plants and 0.129 acre of occupied habitat: 2 individuals and 0.001 acre of habitat at Site 1; 10 individuals and 0.005 acre of habitat due to construction equipment access at Site 1; and 119 individuals and 0.123 acre of habitat at Site 2. Twenty-four individuals will be transplanted to a protected area onsite (NCDOT 2017 - Project Commitments "Green Sheet", NCDOT 2017 Biological Assessment). NCDOT has applied for a permit from NCPCP to relocate individuals to a protected area onsite (NCPCP 2017 - see H naniflora>Permits in NHP files).

DESCRIPTION

General Description North-facing seepy drainage area that flows into Hughes Creek and adjacent moist slopes as well as flats, slopes, and small drainage cuts scattered along Hughes Creek (Tuttle 2016). Dry-mesic Acidic Heath Bluff community type adjacent to Hughes Creek. Upper slopes display good quality examples of mature Virginia Pine with Mountain Laurel, Sourwood, and Dwarf Pawpaw. A seepage area contains a sizeable population of Dwarf-flowered Heartleaf, with Virginia Sweetspires and Small Green Wood Orchid. Lower slopes have many small areas of seepage with patches of Sphagnum, Netted Chain Fern, and American Royal Fern. During a site visit, female Diana Fritillaries were observed ovipositing on Tall White Violet. (D. Cambell from Torlina 2016).

Data Sensitive Element N **Comments**
Monitoring Needs Comments
Research Needs Comments
Research Needs Comments
Additional Inventory Needed N **Comments** The population extends northeast from the northeast boundary of the property in the drainage network, so the area of suitable habitat here may be another 1-2 acres, depending on current land use and microtopography on the adjacent property (Tuttle 2016).

DESCRIPTION

General Description Moist confluence of a network of intermittent/underground, small drainage areas within Dry-Mesic Oak-Hickory Forest (Piedmont Subtype). The focal area where the population occurs consists of numerous narrow, relatively shallow drainage channels with associated drainage depressions/pits and more open surrounding "slopes". Clumps are most frequent along the edges of the drainage depressions and immediately adjacent but also extent onto the surrounding open slopes. Habitat quality is excellent. Adjacent upland areas on the property are more disturbed, with more abundant pine and smaller average tree diameter. Overall average tree diameter is 12-18", and many large trees are present, primarily Quercus alba (maximum 36-40" and many 24") but other species as well. Note: Pam Torlina's description includes Fagus grandifolia as a significant component of the forest; my survey was casual and this species was most likely present, but I did not observe it as abundant or co-dominant.(Tuttle 2016) Mesic Mixed Hardwood Forest. Major associated tree species include Liriodendron tulipifera, Quercus spp., Fagus grandiflolia, and Acer rubrum with an understory of Ilex opaca and Cornus florida, with shrubs including Vaccinium sp., and herbs including Viola spp., Hexastylis spp., and more (Torlina 2016).

Min. Elevation feet **Max. Elevation** feet
EO Observed Area acres

Element Occurrence Report

Scientific Name *Hexastylis naniflora* **EO ID** 36696

EO Number 312

Rep Accuracy High **Separation Comments** EO is located within 2.0 kilometers of another known EO of the same species, however it is separated by unsuitable habitat.

General Comments: Invasive species observed: Ligustrum sinense (rare), Microstegium vimineum (abundant in places but not dominant), Rosa multiflora (1 individual), Lonicera japonica (not abundant), and Magnolia grandiflora (1 individual) (Tuttle 2016).

DESCRIPTION

General Description A northeast-facing mixed hardwood slope on the south side of an unnamed tributary to Hickory Creek. The hardwood ridge supporting this small population of dwarf-flowered heartleaf contains several invasive exotic plant taxa. These non-native plants are well-established and seem to be densest to the west and east of the dwarf-flowered heartleaf population. The invasive exotic plants on this slope are an immediate threat to the prolonged presence of this heartleaf population (Three Oaks via NCDOT 2018).

44.000*^	AB	Little Gunpowder Creek Rare Plant Site 1	617	2015	2011	Cald	Y	The DOT purchased a combined 2.68 acers as a perpetual CE for the species. The two easements are the Wallace and Church Conservation Easements. Has management plan been developed? 2011 survey included only an estimate of plants in CE (1,054)? Do we know the number of plants in the CE now? Last monitoring report indicates that 321 will be widened. Does CE prevent impacts to plants from widening? YES (TB 9/21/2017). Tim will send updated monitoring report with 2015 counts. 390 under protection? Presences noted in 2015. 617 plants counted at sites 38, 39, 43, and 44 in 2012.
48.000	D	Catawba River: Lippard Creek tributary	> 40	1999	1999	Linc	N

77.000*	CD	Little Gunpowder Creek Rare Plant Site 2	699	2013	2007	Cald	Y	DOT monitors. Three subpops - B is entirely in ROW, A and C are partially in ROW. Per the Amended Biological Opinion, NCDOT agreed to protect 90 plants within Subpopulation C by acquiring additional right-of-way. No other plants were agreed to be protected. However, additional right-of-way was acquired on the west side of Deal Mill Road for a stream mitigation project. In so doing, additional plants were thereby protected. (After conducting monitoring in 2013, it was determined that 37 plants from Subpopulation B and 52 plants from Subpopulation A are also under protection. In addition, 201 plants in Subpopulation C now exist within the expanded right-of-way, and therefore are also under protection.) Plants in ROW as of 2013 total 617. Per 2015 Draft monitoring report, there are now 699 plants. ROW acquired for formal protection.
85.000	D	Buffalo Creek: northeast of SR 1903	267	2005	2005	Clev	N	EO is associated with NC DOT project B-3828. No impact planned. No formal protection.

2	**29.000^**	A	Island Creek Heath Bluff	50,541	>1000	2016	2016		Burk	N	Extrapolated estimate. NHP Comp Review and Mont Report.
3	**31.000*^**	C?	NCDOT TIP: R-2824	1,062	>1000	2010	2001		Cata	N	No formal protection throughout all sites that comprise this occurrence. Small portions of sites NW, SW1 and SW2 are found as a roadside population in right-of-way. DOT monitors. 1,202 plants in 2011. Per 2015 draft report, there are now 1,062 plants.
4	**32.000***	D	NCDOT TIP R-2824	457	100-500	2013	2011		Cata	N	The northern subpopulation of the occurrence (76 plants) is situated within the existing DOT ROW of I-40. This portion of the occurrence is a roadside population that is not under formal protection from a binding agreement. Other plants in population are outside of the ROW. DOT monitors. Per draft 2015 report, there are 72 plants in the ROW. 457 plants counted in 2015 DOT survey.
5	**44.000*^**	AB	Little Gunpowder Creek Rare Plant Site 1	617	500-1000	2015	2011		Cald	Y	The DOT purchased a combined 2.68 acers as a perpetual CE for the species. The two easements are the Wallace and Church Conservation Easements. Has management plan been developed? 2011 survey included only an estimate of plants in CE (1,054)? Do we know the number of plants in the CE now? Last monitoring report indicates that 321 will be widened. Does CE prevent impacts to plants from widening? YES (TB 9/21/2017). Tim will send updated monitoring report with 2015 counts. 390 under protection? Presences noted in 2015. 617 plants counted at sites 38, 39, 43, and 44 in 2012.
6	**77.000***	CD	Little Gunpowder Creek Rare Plant Site 2	699	500-1000	2013	2007		Cald	Y	DOT monitors. Three subpops - B is entirely in ROW, A and C are partially in ROW. Per the Amended Biological Opinion, NCDOT agreed to protect 90 plants within Subpopulation C by acquiring additional right-of-way. No other plants were agreed to be protected. However, additional right-of-way was acquired on the west side of Deal Mill Road for a stream mitigation project. In so doing, additional plants were thereby protected. (After conducting monitoring in 2013, it was determined that 37 plants from Subpopulation B and 52 plants from Subpopulation A are also under protection. In addition, 201 plants in Subpopulation C now exist within the expanded right-of-way, and therefore are also under protection.) Plants in ROW as of 2013 total 617. Per 2015 Draft monitoring report, there are now 699 plants. ROW acquired for formal protection.
7	**87.000**	D	Catawba River: Lower Creek: Miller Creek	0	<100	2011	2011		Cald	N	55 plants dug by HARP on 04 November 2011 and relocated to EO 294 (Bud Geitner Park), few plants left, likely extirpated by Quarry expansion

EO Rank Specifications Version Used

Description

EO Type
General Description Moist confluence of a network of intermittent/underground, small drainage areas within Dry-Mesic Oak-Hickory Forest (Piedmont Subtype). The focal area where the population occurs consists of numerous narrow, relatively shallow drainage channels with associated drainage depressions/pits and more open surrounding "slopes". Clumps are most frequent along the edges of the drainage depressions and immediately adjacent but also extent onto the surrounding open slopes. Habitat quality is excellent. Adjacent upland areas on the property are more disturbed, with more abundant pine and smaller average tree diameter. Overall average tree diameter is 12-18", and many large trees are present, primarily Quercus alba (maximum 36-40" and many 24") but other species as well. Note: Pam Torlina's description includes Fagus grandifolia as a significant component of the forest; my survey was casual and this species was most likely present, but I did not observe it as abundant or co-dominant.(Tuttle 2016) Mesic Mixed Hardwood Forest. Major associated tree species include Liriodendron tulipifera, Quercus spp., Fagus grandiflolia, and Acer rubrum with an understory of Ilex opaca and Cornus florida, with shrubs including Vaccinium sp., and herbs including Viola spp., Hexastylis spp., and more (Torlina 2016).

Description

EO Type
General Description North-facing seepy drainage area that flows into Hughes Creek and adjacent moist slopes as well as flats, slopes, and small drainage cuts scattered along Hughes Creek (Tuttle 2016). Dry-mesic Acidic Heath Bluff community type adjacent to Hughes Creek. Upper slopes display good quality examples of mature Virginia Pine with Mountain Laurel, Sourwood, and Dwarf Pawpaw. A seepage area contains a sizeable population of Dwarf-flowered Heartleaf, with Virginia Sweetspires and Small Green Wood Orchid. Lower slopes have many small areas of seepage with patches of Sphagnum, Netted Chain Fern, and American Royal Fern. During a site visit, female Diana Fritillaries were observed ovipositing on Tall White Violet. (D. Cambell from Torlina 2016).

Survey Date 2015-03

Last Observation Date 2015-03 **First Observation Date** 2014-08-14

EO Data Axiom Environmental biologists observed significant damage and disturbance to site 5 (the large central part of the population). Approximately 75-95% of plants in site 5 appear to be covered by debris or destroyed by clearing and construction of an access road to the floodplain of Glade Creek (Axiom Environmental 2015).
Smith, Davis, Jernigan, and Perkinson observed a total of 1363 plants on 14 August 2014 in 8 separate sites. Site 1: 77 individuals in 0.4 acres; Site 2: 128 individuals in 0.16 acres; Site 3: 74 individuals in 0.07 acres; Site 4: 50 individuals in 0.04 acres; Site 5: 947 individuals in 2.08 acres; Site 6: No information provided; Site 7: 38 indivuals in 0.02 acres; Site 8: 49 indivuals in 0.04 acres (Smith 2014).

Description

EO Type

General Description Site 1: Soils are mapped Fairview sandy loam, 15 to 25 percent slopes. Natural Communities occupied by this site include Mesic Mixed Hardwood Forest: Piedmont Subtype and disturbed/maintained land - most Hexastylis plants occur within 30 feet of the roadside wood-line. The Mesic Mixed Hardwood Forest provides medium quality habitat (generally appropriate vegetation, though of somewhat low diversity, some soils are disturbed from road installation), and maintained/disturbed land provides excessive sunlight and disturbed soils, providing low quality habitat. Associated species: Forest- Canopy: Fagus grandifolia, Quercus alba; Sub-canopy: Oxydendron arboreum, Carpinus caroliniana, Kalmia latifolia, Acer rubrum; Shrub: C. caroliniana, O. arboreum
Herb/vine: Smilax rotundifolia, Toxicodendron radicans, Viola hastate, Hexastylis heterophylla; Roadside- O. arboreum, C. caroliniana, S. rotundifolia (Smith 2014).

Protection Comments This population was significantly damaged in early 2015 or late 2014 by the construction of an access road going through the largest part of the population (Axiom Environmental 2015).
Protection / management needs and opportunities: A narrow stretch of natural forest is bounded to each side by maintained road shoulder/utility line right-of-way and a residential yard.

Washburn Switch Business Park

Directions

Cleveland County, Approximately 0.8 miles north of the community of Ora. The Washburn Switch tract is on the south side of Farmville Road (SR 1342), and east of Washburn Switch Road (SR 1313) and the railroad tracks. Plants occur along tributaries to Brushy Creek. Plants were dug up and rescued from three locations (A, B, C) along the tributaries and moved to a wooded transplant site in the southeast corner of the property (see source features). One location, approximately 375 feet southeast of Jordan Drive, was left undisturbed (Riddle 2015).

Additional Topics

General Comments
Additonal Topics A PCP permit was submitted during summer 2015 to rescue and move plants to the Broad River Greenway, many miles away. A solution was found to tranplant plants within the property, near an existing Hexastylis naniflora population, which precluded the need for a state permit (Mara Alexander 2015).

Representation Accuracy

Represenstation Accuracy High

Rpresentation Accuracy Comments

GPS data points and field observations were used to map this occurence (Padgett 2015).

EO Development Details

Separation Distance Used 500 Meters **Separation Distance Type** Custom

Separation Comments

This occurrence is a separate EO from 219, located approximately 1100 meters to the south west due to some unsuitable habitat (Padgett 2015). This population is also a possible hybrid and EO 219 is not documented to show evidence of hybridization, therefore kept as a separate EO (Robinson 2015).

Representation Extent

Confidence Extent ? - Uncertain whether full extent of EO is known

Additional Inventory Needed

Additional Inventory Needed N

Additional Inventory Needed Comments

This occurrence has some charactistics of both Hexastylis naniflora and Hexastylis heterophylla. This area may be a hybridization zone. All know occurrences in the region have all been mapped as H. naniflora (Padgett 2015).

Element Occurrence Report

EO ID 30019 **Subnational Scientific Name** *Hexastylis naniflora* **Shape_ID** 119741

EO Data 2016: 153 plants total observed on 20 March 2016 by Campbell; 104 plants (99%) survived from the Hickory site (EO 277) and 37 plants had flowers; 49 plants (100%) survived from the Lenoir site (EO 087) and 19 plants had flowers; all plants exhibited vigorous growth (HARP 2016).
2015: 154 plants total observed on 12 April 2015 by Campbell; 107 plants (98%) survived from the Hickory site (EO 277) and 46 plants had flowers; 49 plants (89%) survived from the Lenoir site (EO 087) and 21 plants had flowers; all plants exhibited vigorous growth (HARP 2015).
2014: 156 plants total observed on 09 April 2014 by Campbell; 107 plants survived from the Hickory site (EO 277) and 63 plants had flowers; 49 plants survived from the Lenoir site (EO 087) and 21 plants had flowers; all plants exhibited vigorous vegetative growth (HARP 2014).
2013: 158 plants total observed on 11 May 2013 by Campbell; 109 plants survived from the Hickory site (EO 277) and 92 plants had flowers; 49 plants survived from the Lenoir site (EO 087) and 37 plants had flowers; all plants exhibited vigorous vegetative growth (HARP 2013).
2012: 160 plants total observed on 09 April 2012 by Campbell and Matthews; 111 plants (84%) survived from the Hickory site (EO 277) and 72 plants had flowers; 49 plants (89%) survived from the Lenoir site (EO 087) and 49 plants had flowers; all plants exhibited vigorous growth (HARP 2012).
2011: Total of 187 plants relocated to this site into two plots by HARP biologists on 05, 06, and 11 November 2011 from EOs 087 and 277 (Martin Marietta quarry sites) [no indication a native population was present in this area]. 132 plants from the Hickory site (EO 277) were planted in an area delineated with red painted steel spikes and 55 plants from the Lenoir site (EO 087) were planted in an area delineated with glow orange painted steel spikes (HARP 2011).

Gunpowder Creek
NCDOT TIP #R-3437

Directions

Gunpowder Creek, Caldwell County. Occurrence consists of three subpopulations located approximately 1km north of the community of Hudson, to the east of US-321A, to the west of Gunpowder Creek, and north of SR-1160 (Mt. Herman Road) - all three are no farther than 0.5 mile north of SR-1160; subpopulation A is located just north of Optimist Ave; subpopulation B is located just south of Optimist Ave; subpopulation C is located just north of the Mt. Herman Road/Mulberry Street intersection in sewer easement.

EO Data Subpopulation A: 317 individuals over 0.53 acres counted by Bassette, Herman, Medlin, Dilday, and Gray on 28 March 2007. Plants mostly single stem with some small clumps; buds and flowers present (Bassette 2007). Subpopulation B: 15 individuals (10 vegetative, 5 in flower) over 0.04 acres observed by Renninger and Herman on 07 April 2010. Plants small or single stems; seedlings present (Renninger 2010).
Subpopulation C: 41 individuals over 0.42 acres observed by Renninger, Frazer, and Burroughs on 21 April 2010. About 25% vegetative, 75% in flower; seedlings present (Renninger 2010).

EO Rank

EO Rank Factor Survey Data

Condition of EO Subpop A: Low threat of invasives; however, Lonicer japonica, Ligustrum sinense, and Microstegium present in surrounding landscape; well-used dirt path traversing some of subpopulation (2007). Subpop B: Habitat adequate; thick duff all over slope and heavily shaded (2010). Subpop C: Dense growth of Japenese honeysuckle and some privet. Saplings of tree-of-heaven present. Site highly disturbed with trash present (2010).

Condition Rating

Size of EO Subpopulation A: 317 individuals over 0.53 acres (2007).
Subpopulation B: 15 individuals over 0.04 acres (2010).
Subpopulation C: 41 individuals over 0.42 acres (2010).

Landscape Context Between two major US highways, near urban area; in corridor of proposed new road [TIP No. U-3437] (2010).

EO Rank C - Fair estimated viability **EO Origin Subrank**

EO Rank Date 2010-04-21

EO Rank Comments 200- 500 clumps occurring in less than one acre of high quality forest or on land impacted by human disturbance such as logging, grazing, mowing, etc.

EO Rank Specifications Version Used

Description

EO Type

General Description Supopulation A: North-facing slope; plants mid-slope, some stream bank; moist, well drained site. Mesic Mixed Hardwood Forest (Piendmont subtype) - medim quality; Pacolet soils.Associated species: Fraxinus americana, spotted wintergreen, Polystichum acrostichoides, Asplenium platyneuron, Quercus falcata, Smilax rotundifolia, Liriodendron tulipifera, Quercus alba, Pinus strobus, Carpinus caroliniana, Ilex opaca, Cornus florida, Rhododendron maximum, Prunus serotina, cranefly orchid, Viola spp., Rubus argutus, Acer rubrum, Oxydendrum arboreum, Pinus virginiana, Tsuga canadensis (Bassette 2007). Subpopulation B: Mid-slope, dry, closed canopy. Mesic Mixed Hardwood Forest (Piendmont subtype) - disturbed, medim quality; Pacolet soils. Associate species: Quercus alba, Quercus rubra, Carya tomentosa, Fagus grandifolia, Pinus strobus, Rhododendron maximum, Ilex opaca, Lycopodium sp., Polystichum acrostichoides, Chimaphila maculata (Renninger 2010). Subpopulation C: North-facing slope in sewer easement next to unnamed tributary of Gunpowder Creek. Steep slope adjacent to stream. Pacolet soils. Associated species primarily tulip poplar with a mix of white pine, red maple, American holley, privet, poison ivy, and Japanese honeysuckle (Renninger 2010).

EO Rank Factor Survey Data

Condition of EO Plants and habitat are in excellent condition

Condition Rating
Size of EO Several hundred clumps estimated in 2016.
Landscape Context Forest is recovering from previous cutting as evidenced by abundance of Liriodendron tulipifera in the canopy and average canopy tree diameter of approximately 10-12 inches, but otherwise in excellent condition with no invasive plant species noted (Tuttle 2016).

EO Rank AB - Excellent or good estimated viability **EO Origin Subrank**

EO Rank Date 2016-08-04
EO Rank Comments

EO Rank Specifications Version Used

Description

EO Type
General Description Moist, NE-facing bluff and streamside seepy areas in Mesic Mixed Hardwood Forest. Abundance is highest on the edges of small depressions (microtopography) and on relatively flat but well-drained areas next to the small stream channel. Abundance decreases with distance from the stream channel. The species is generally absent from a patch of Piedmont Heath Bluff dominated by Kalmia latifolia that occurs along the stream between the two mapped polygons. The forest is recovering from previous cutting, as evidenced by abundance of Liriodendron tulipifera in the canopy and average canopy tree diameter of approximately 10-12 inches. Habitat quality is excellent (Tuttle 2016).
This area is characteristic of a Dry-Mesic Oak-Hickory Forest, and consists of a maturing canopy and a lush understory of trees, shrubs, and herbaceous plants. This area also contains two tributaries to White Oak Creek. The first tributary flows north/northwest through the Property for approximately 2,506 feet; an approximately four acre lake is formed by this tributary. The second tributary flows north/northwest along the northeastern property line for approximately 1,337 feet...There is an approximately 15 acre Open Field within this area that is mostly grassy area and occasionally mowed. There are several trails, maintained by the Foothills Equestrian Trails Association, that traverse this area." See Torlina (2009) for a partial species list from the property.

Additional Topics

General Comments

Additonal Topics "Plants from each EO were placed into circular plots. Plots were chosen by locating areas near but not including resident [plants]. EO's were not mixed within a plot. The location of each plot was GPS'ed and plot size, EO, and total number of plants in the plot was recorded. A metal stake with metal label was installed in the center of each plot. Average planting density was about 4 plants per meter. We [NCDOT] required 23 plots to accomodate all the plants. Plenty of room for additional plots at this site. Approximately 96 person-hours were spent in the transplant effort" (Fontaine 2010).

EO Development Details

Separation Distance Used 1 Kilometers **Separation Distance Type** Unsuitable Habitat

Separation Comments

Sub EO281 is located 0.7km to the east; sub EO283 is located 0.3km to the south ; All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide. Parent EO 178 is approximately 1.5 air kilometers from Parent EO 029, however the occurrences are separated by unsuitable habitat (ridge and town) greater than 1 kilometer wide and are therefore separate records (Wichmann and Franklin 2005). See msp for details.

Separation Comments

Sub EO 161 is located 0.03 km to the southeast; All sub EOs are located within 2.0 Kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide. Parent EO178 is approximately 1.5 air kilometers from EO 029, however the occurrences are separated by unsuitable habitat (ridge and town) greater than 1 kilometer wide and are therefore separate records (Wichmann and Franklin 2005). See map for details.

Additional Topics

General Comments Dennis Herman (NCDOT) and Heather Renninger (NCDOT) visted this site on 07 April 2009 to confirm the identity of the Hexastylis individuals. Flower morphology was examined in over 50 randomly selected plants and all were consistent H. naniflora characteristics. No evidence of other Hexastylis species was found at this site (Bassette 2009).

Element Occurrence Report

EO ID 28343 **Subnational Scientific Name** *Hexastylis naniflora* **Shape_ID** 106198

Additonal Topics Project let date is 15 June 2010. NCDOT is working to secure a conservation easement on the portion of this site that remains intact after the construction; as of 20 January 2010, the easement had not been secured. If the easement cannot be secured, NCDOT biologists will remove the 67 plants and hold them until it can or hold until another suitable site is acquired (Bassette 2010). NCDOT project construction (R-2824) will incur adverse effects (direct and indirect impacts) to 0.1275 acre of the 0.16 acre population, cause an anticipated loss of 73 of 126 plants. Prior to construction, NCDOT biologists will remove the 67 plants that will be directly impacted to areas within the same site that will not be impacted [the easement area]. Monitoring will take place every two years of a six year period after construction activities area completed (Bassette 2009).

Survey Date 2011-11-04
Last Observation Date 2011-11-04 **First Observation Date** 2009-04-03
EO Data 132 plants dug by HARP [from the west occurrence] on 04 November 2011 and relocated to EO 294 (Bud Geitner Park); relocation occurred to permit expansion at the quarry [see 'Additonal Topics']; Matthews reported that, as far as any plants remaining at this location, "I am satisfied we got what was there"; if the quarry is developed, any remaining plants will be extirpated (HARP 2011, Matthews 2012). Total of 82 plants observed at two locations by Matthews and Gaffney on 03 April 2009: East subpopulation - 18 plants in an area of 50x40 feet; West subpopulation - 64 plants in flower over 100 square feet (Matthews 2009).

EO ID 27352 **Subnational Scientific Name** *Hexastylis naniflora* **Shape_ID** 98886

Additonal Topics Relocation of plants from this occurrence occurred to permit expansion at the quary. At the request of Martin Marietta, negotiations were held with USFWS regarding the potential for transplanting the population. This action was approved verbally by USFWS on 23 May 2011 (HARP 2011). "The proposed location of CMP #1 and Basins #7 and #8 can impact [the west subpopulation] of plants...There is no proposed developmental impact for [the east subpopulation] of plants" (Matthews 2009).

Cliffside Steam Station
USFWS Flex Fund Monitoring Site 7
South Shore Cliffside Steam Station Ash Basin Transplant

Directions

Cliffside Steam Station. Scattered on the Steam Station Property. There are two areas where impacts from various projects occur: 1) East of Suck Creek: Adjacent to the ash pond, on its east and southeast sides. Plants also found elsewhere on the property [data was not reported, only that plants are present] (USFWS 2008). 2) McCombs Road: In the area west of McCombs road and between the transmission lines that cross the McCombs Road 0.25 road mile and 0.55 road mile south of Matheny Road (SR-1190); also on the south bank of the Broad River, just east of the transmission line (USFWS 2009).

Survey Date 2016-06-20

Last Observation Date 2016-06-20 **First Observation Date** 2007-08-10-Pre

EO Data <u>2016:</u> Bloom counted 2,458 plants on June 9 and 20, 2016 in 1.9 acres of monitoring plots (the southern-most plot was not counted in 2016). Estimated 39,535 total plants covering the entire 30.5 acre population (Bloom 2016).
<u>2015</u>: Padgett counted 2943 plants on 27 May 2015 in 2.86 acres of monitoring plots. Estimated 33,559 total plants covering the entire 30.56 acres (Padgett 2015).
<u>2014 </u>: 2866 plants observed in permanent monitoring plots by Padgett on 6 and 11 June 2014, estimated 32681 total plants covering 30.56 acres (Padgett 2014).
<u>2013:</u> 2909 plants observed in permanent monitoring plots by Padgett and Israel on 8 May 2013, estimated 33,171 total plants covering 30.56 acres (Padgett 2013).
<u>2012</u>: Padgett counted 2287 plants in permenant monitoring plots. Total population estimate is 26000+ plants (Padgett 2012).
<u>Pre 2012</u>: Based on surveys conducted between 2005-2008, Siler estimates that there are at least 5,500 plants spread throughout the property. This number includes those east of Suck Creek, in the ash pond project area (Siler 2009).
McCombs Road/Broad River:
<u>2009: </u>USFWS and Environmental Resources observed 3,150+ plants in this action area in 2009: 3000+ in the area west of the proposed switching station on the west side of McCombs Road and about 150 plants east of the transmission line corridor on the Broad River. Four plants near the switching station site will be impacted by its construction; these are to be relocated to a site elsewhere within the population (USFWS 2009).
East of Suck Creek:
<u>2011: </u>65 plants total (plot A=15 plants; C=18 plants; D=27 plants; F=5 plants) observed by Siler in the four circular plots on 28 September 2011. Comparing October 2010 numbers to September 2011 numbers, the data indicates 115% survival in plot A; 86% survival in plot B; 73% in plot C; and 71% in plot F (Siler 2011).
2010: 78 plants total (plot A=13 plants; C=21 plants; D=37 plants; F=7 plants) observed by Siler in the four circular plots on 01 October 2010. Comparing October 2009 numbers to October 2010 numbers, the data indicates 62% survival in plot A; 110% survival in plot B; 69% in plot C; and 100% in plot F (Siler 2010).
<u>2009</u>:On 04 April 2009, four 3 sqm circular plots were established by Environmental Resources staff in order to monitor the relocated plants. A total of 101 plants (plot A=21 plants; C=19 plants; D=54 plants; F=7 plants) were observed by Siler in the plots on 07 October 2009; a total of 79 plants (plot A=18 plants; C=19 plants; D=30 plants; F=12 plants) were observed by Siler in the plots on 04 April 2009 (Siler 2009).
<u>2008: </u>On 06 June 2008, Siler observed 136 plants from those moved in September 2007 survived - 81% survival with some resprouting from previously reported dead plants. On 04 June 2008, Siler observed 772 plants of the 908 plants moved in December 2007 survived - 90% survival; many plants flowering (Siler 2011). Environmental Resources staff observed in the spring of 2008 that 189 of the transplants did not survive. Therefore, the total number of plants now protected in the "action area" was estimated to be 1,111 (USFWS 2008).
<u>2007</u>: Siler observed on 03 November 2007 that 121 of the 168 plants moved in September 2007 survived - 72% survival (Siler 2011). 1,097 plants were relocated to 5+ feet upslope from the historic full-pool elevation: 168 plants on 06 & 07 September 2007, 21 plants on 03 November 2007, and 908 plants on 03 & 07 December 2007 (USFWS 2008). Approximately 1,300 plants were observed in the "action area" by Environmental Resources staff sometime before 10 August 2007 (USFWS 2008).

Protection Comments Duke Energy proposed posting signs in the area where the plants were relocated. However, this is not permanent protection because Duke Energy is conducting extensive planning for the installation of scrubbers, expansion of generation, and retirement of older units; therefore, Duke Energy requires the option of using the land where the plants are located for these purposes (USFWS 2008).

Additional Topics

General Comments
Additonal Topics Plants were impacted by the raising of the ash pond water levels. The plants were not discovered until after temporary innundation but most did not survive this event. Additionally, about 17% of the plants did not survive the relocation, which done to avoid innundating them. The population may still be impacted by expansion activities at this facility (2008).

Monitoring Needs Comments NCDOT is monitoring this population as part of a commitment to USFWS (Renninger 2010).

Research Needs Comments

EO Rank

EO Rank Factor Survey Data

Condition of EO Small amounts of Japanese honeysuckle (Lonicera japonica) growing along periphery of population. Small amount of Japanese grass (Microstegium vimineum), sericea lespedeza (Lespedeza cuneata), and mimosa (Albizia julibrissin) observed within the NCDOT right-of-way but outside the limits of the H. naniflora population (Renninger 2010).
Healthy looking plants, including numberous large clumps of leaves (Bassette 2008).

Condition Rating

Size of EO 230 individuals (2010). At least 192 individual clumps (2008).

Landscape Context More than 1 acre of suitable habitat on the southwest quadrant, and more than 0.1 acre in the southeast quadrant (Renninger 2010).

EO Rank C - Fair estimated viability **EO Origin Subrank**

EO Rank Date 2014-05-21

EO Rank Comments EO rank based on EO Rank Specs for this species (Wichmann 2008).

EO Rank Specifications Version Used

Description

EO Type

General Description Majority of site occurs in a Piedmont/Coastal Plain Heath Bluff (high quality); some of the site occurs in a Mesic Mixed Hardwood Forest (Piedmont subtype) (high quality). Soils on most of the site are mapped as LuF (Louisburg and Louisa soils, 25-55% slopes); very southern and eastern fringes are mapped as CsE2 (Cecil soils, 15-25% slopes, eroded). Associated species: Fagus grandifolia, Quercus alba, Quercus rubra, Quercus falcate, Liquidambar styraciflua, Acer rubrum,
Oxydendrum arboretum, Carpinus caroliniana, Cornus florida, Hammamelis virginiana, Kalmia latifolia, Halesia Carolina, Leucothoe fontanesiana, Viburnum acerifolium, Smilax spp., Vaccinium vacillans, Vitis rotundifolia, Hexastylis arifolia, Polystichum acrostichoides, Tipularia discolor, Asplenium platyneuron (Renninger 2010).
High quality Piedmont/Coastal Plain Heath Bluff and high quality Mesic Mixed Hardwood Forest (Piedmont subtype). Associated NC watch list species include: Trillium catesbaei and Nestronia umbellula. Population extends from top of stream bank to near crest with most individuals occuring on the midslope. Moisture regime is well-drained, moist, to mesic. Canopy cover is approximately 50% with a prevalence of understory trees and shrubs (Bassette 2007).

Additional Topics

General Comments

Additonal Topics Invasive species pose a low threat overall, a small amount of Microstegium vimineum and Lespedeza cuneata are located outside the population but along nearby roadside. Albizia julibrissin occur along the edges of the site [population?] (Bassette 2007).

EO ID 25900 **Subnational Scientific Name** *Hexastylis naniflora* **Shape_ID** 90335

Survey Date 2012-03-03
Last Observation Date 2012-03-03 **First Observation Date** 2008-03-17
EO Data Wagner et. al. counted 100 plants on 3 March 2012; there were a lot of buds but no plants in full bloom; many small H. naniflora plants (1-3 leaves) and few larger plants (Wagner 2012). Plants observed by Jones in January, April, and June 2009; no count made (Jones 2009). Several hundred plants (may be upwards of 750-1000 plants) along stream corridors of unnamed stream and adjacent north-facing slopes. In flower and bud on 17 March 2008 (Padgett 2008).

EO Rank

EO Rank Factor Survey Data

Condition of EO Good to very good condition. Some past logging, and one access road.

Condition Rating
Size of EO Very large.
Landscape Context Very good along stream corridor, poor to the north where there is a cutover.

EO Rank A? - Possibly excellent estimated viability **EO Origin Subrank**

EO Rank Date 2008-03-24
EO Rank Comments The rank may be lowered or raised once the plants have been censused. 2012 data not counted towards EO rank because entire population may not have been censused (Robinson 2015).
EO Rank Specifications Version Used

Description

EO Type
General Description Dry-Mesic Oak-Hickory Forest and Mesic Mixed Hardwoods. Canopy species are Quercus alba, Q. coccinea, Q. falcata, Carya glabra, C. alba, Liriodendron tulipifera, and Fagus grandifolia. The understory consists of Acer rubrum, Cornus florida, Oxydendrum, and Ilex opaca. Shrubs are common and thick in palces with Kalmia latifolia and Rhododendron maximum present. Other shrubs include Vaccinium spp., and Euoynmus maericanus. Vines are present as Smilax spp., and Begnonia caprolata. Herbs include Hexastylis naniflora, Chimaphilia maculata, Galax urecolata, Hepatica maculata, and Mitchella repens.

Protection Comments The property owner proposed to preserve the remaining dwarf-flowered heartleafby placing a deed restriction on the site. The deed restriction will result in the preservation of 2.1 acres of dwarf-flowered heartleafhabitat and will protect about 362 individual dwarf-flowered heartleaf plants (Cole 2007).

EO Rank

EO Rank Factor Survey Data

Condition of EO Possibly reduced viability in in 2012 (Robinson 2013). Good condition (2008)

Condition Rating

Size of EO Only 5-6 plants observed in 2012, but part of population may not have been seen (2012). Large population (2008).

Landscape Context Poor to fair. The forests it occurs in is immature (10-15 years old).

EO Rank C? - Possibly fair estimated viability **EO Origin Subrank**

EO Rank Date 2012-03-16

EO Rank Comments Rank not give as an A due to condition of the natural community(Padgett 2008).

EO Rank Specifications Version Used

Description

EO Type

General Description Mature forests. There are lots of Liriodendron tulipifera coming up in the mix, with Quercus alba, Q. rubra, Q. coccinea, Carya alba, and Carya glabra. Acer rubrum and Oxydendrum arboreum are common. Shrubs are abundent along the steep slopes of the streams with Kalmia latifolia very common. Herbs are sparse due to the thick regrowth of canopy species. Galax, Chimaphilia maculata and Hypoxis hirsuta are common (Padgett 2008).

Min. Elevation	970.00	**feet**	295.66	**meters**
Max. Elevation	1,000.00	**feet**	304.80	**meters**
Observed Area	8.99	**acres**	3.64	**hectares**

EO Rank

EO Rank Factor Survey Data

Condition of EO Fair to good condition. Some ATV usage across stream.

Condition Rating
Size of EO Approximately 0.35 acres.
Landscape Context Good landscape context along the small stream and coves. Poor once you move away from stream corridor.

EO Rank CD - Fair or poor estimated viability **EO Origin Subrank**

EO Rank Date 2008-03-20
EO Rank Comments

EO Rank Specifications Version Used

Description

EO Type
General Description Dry-Mesic Oak-Hickory Forest. Dominating canopy species are Quercus alba, Q. coccinea, Liriodendron tulipifera, and Acer rubrum. Understory of Cornus florida and Oxydendrum arboreum. Some Kalima latifolia in the shrub layer. Herbs are common with Hexastylis naniflora, Carex spp., Polystichum acrostichoides, Medeola virginana, Prenanthes serpentaria, and Coreopsis major present.

Survey Site

Survey Site Name
South Fork Catawba River, Rhyne Conservation Preserve (Sub EO of EO 302)
Rhyne Preserve Transplants
USFWS Flex Fund Monitoring Site 1

Directions

South Fork Catawba River, Rhyne Conservation Preserve: Five locations along the South Fork Catawba River and surrounding Southside N.C., on north-facing slope just south of an unnamed tributary of the South Fork Catawba River.
Location 1: North of a sharp right angle curve in the South Fork Catawba River and north of South Fork Road (SR 1248), within drainages approximately 0.1 mile north of the River.
Location 2: West of the South Fork Catawba River, along north facing slopes immediately south of South Fork Road (SR 1248).
Location 3: Small patch immediately northeast of the bridge of South Fork Road, east of the South Fork Catawba River.
Location 4: East of South Fork Catawba River and along drainages immediately east of South Fork Road (SR 1248).
Location 5: "South of abandoned mill, just south of Charlottes Lane; park at gate walk on paved road toward old mill (right fork). Then turn down old unpaved road bed (RR tracks on topo map). Cross stream on old bridge, plant occur on north facing slope east of bridge and west of the dam" (Franklin and Wichmann 2005), and extending upstream along the south side of the unnamed tributary approximatly 0.35 miles.

Survey Date 2016-05-05

Last Observation Date 2016-05-05 **First Observation Date** 2000-04-05

EO Data 2016: 1,329 plants counted by Bloom on 5 May 2016 in 1.5 acres of monitoring plots. Estimated 19,873 total plants across 22.43 acres (Bloom 2016).
2015: 1,543 plants counted by Padgett and Feldman on 19 May 2015 in 1.5 acres of monitoring plots. Estimated 22,847 total plants covering the entire 22.21 acres (all 5 locations) (Padgett and Feldman 2015).
2014: 1,690 plants counted on 29 May 2014 in 1.5 acres of monitoring plots. Estimated 25,000 total plants covering the entire 22.21 acres (all 5 locations) (Padgett 2014).
2013: 1,492 plants counted from three permanent monitoring plots with the population. Population mapped to be 22.21 acres total with an estimated 22,000+ plants on the site on 19 July 2013 (Padgett 2013).
2012: 1,378 plants counted from three permanent plots for estimate of 20,404 plants scattered across 22.21 acres within the whole site on 18 July 2012 (Padgett 2012). Site remapped in May of 2012 (Padgett 2013).
2006: Daves reported that 675 plants were moved from the Lincolnton-Lincoln County Airport to a plot within the Rhyne Preserve on 18 and 19 October 2006 (Daves 2006). Reintroduction plot is a separate source feature within Location 5, south of the unnamed Tributary, east of the South Fork River (Robinson 2014).
2005: Estimate 70-100; 59 plants counted, 5 flowering 11 May 2005, along north facing slopes, south of an unnamed tributary to South Fork Catawba River (Location 5) (Franklin and Wichmann 2005).
2002: Present on 5 April 2000 (Matthews et al 2002).

Element Occurrence Report

EO ID 24218 **Subnational Scientific Name** *Hexastylis naniflora* **Shape_ID** 73383

Condition of EO	Areas of Hexastylis naniflora scattered along predominantly north-facing slopes in scattered and concentrated localities throughout the site. The condition of theses sites is good to very good with well established mature to maturing Oak-Hickory Forest (mostly Dry-Mesic Oak --Hickory Forest) present (Padgett 2012).
Condition Rating	
Size of EO	
Landscape Context	

EO Rank A - Excellent estimated viability **EO Origin Subrank** r - Reintroduced/restored

EO Rank Date 2016-05-05

EO Rank Comments Rank is based on all known locations (2016). >10,000 plants estimated to occur across all locations (2016). Rank specs followed: more than 500 clumps (rosettes) occurring in greater than one acre of high quality forest such as Dry-Mesic Oak Hickory Forest or Mesic Mixed Hardwood Forest. The high rank of this EO is based on the transplanted population (Mason 2006).

Additional Topics

General Comments Observed threats: Public Access Trail (South Fork Rail Trail) allows the public access to a small population (Plot #2). Threat: High / Scope: Low / Immediacy: High (Bloom 2016).
In 2006 plants were transplanted to Location 5 from the Lincoln County airport population (see parent EO 261). Transplanted to a north-facing slope in natural habitat. Daves noted that the transplanted plants were moved to an area distinct from the naturally occurring population and could be monitored separately (pers. comm. to S. Mason, 10 October 2006). The transplant plot is indicated with a separate source feature within the EO.

Last Observation Date 2006-06-15 **First Observation Date** 2005-10

EO Data 2006: Daves reported that on 18 and 19 October 2006 the 675 plants to be impacted were moved to the Rhyne Conservation Preserve [see EO 260] (Daves 2006). Wells observed the groups of plants in the Action Area on 15 June 2006; no data reported (Wells 2006). 1,246 individual plants, in 7 groups [Group A: 20 plants, Group B: 50 plants, Group C: 61 plants, Group D: 126 plants, Group E: 243 plants, Group F: 343 plants, Group G: 403 plants], were observed in March and April 2006 by S&ME staff within the "Action Area", also referred to as "Study Area 2". Of these, 675 plants are within the footprint of proposed the clearing and grubbing activities, which include all of groups A, B, and C and a portion of groups D, E, and F [see map in Wells (2006) G06WEL02NCUS]. These plants are expected to be moved to Rhyne Conservation area (Wells 2006 in G06WEL02NCUS, Daves 2006).
2005: Daves, McRae, and Beckstrom first observed the occurrence in October and November 2005 (Cole 2006, Wells 2006).

Private organization	Lincolnton-Lincoln County Airport	

Owner Comments

OwnerInfo_BCD N

Additional Topics

General Comments

Additonal Topics Indirect effects to the remaining plants include increased sunlight to the plants in areas adjacent to areas that are cleared and grubbed. This is expected to result in altered habitat conditions at the immediate edge of the tree line, making the area less hospitable to this species. Construction and maintenance of the existing Airport approach has also resulted in an influx of invasive species, which will likely result in additional loss of plants (Wells 2006).

Catawba River: Hoyle Crk-Micol Crk, tributary E of Hoyle Crk, East Burke High School transplant area (Sub EO of EO 178)

Directions

Catawba River: Hoyle Crk-Micol Crk, tributary east to Catawba River located just east of Hoyle Creek. This is a sub EO of Parent EO 178. This is the riparian relocation area referred to by Boaze (2008) [Note: it is unclear in Boaze (2008) whether EO 255 is considered part of the riparian relocation area. NHP assumed it was not when these occurrences were mapped because a separate plant count for that area was provided with the shapefiles].

EO ID 22493 **Subnational Scientific Name** *Hexastylis naniflora* **Shape_ID** 63945

EO Data Monitoring data - 2010: Total of 376 flagged plants: 227 resident (193 alive + 34 alive without leaves) and 149 relocated (116 alive + 33 alive without leaves) plants observed at this site by Boaze on 26 May 2010. A considerable number of unflagged/not monitored plants are present in this area (Boaze 2010).
2009: Monitoring data - Total of 341 plants: 191 resident (161 alive + 30 alive without leaves) and 150 relocated (126 alive + 24 alive without leaves) plants observed at this site by Boaze on 01 June 2009. A considerable number of unflagged/not monitored plants are present in this area (Boaze 2009). 2008: Monitoring data - Total of 379 plants: 229 resident (207 alive + 22 alive without leaves) and 150 relocated (128 alive + 22 alive without leaves) plants observed at this site by Boaze in May 2008. No flowers present (Boaze 2008).
2006: Total of 415 plants: 265 resident and 150 relocated plants observed at this site by Boaze in July 2006. No flowers present (Boaze 2008). A total of 515 plants, scattered between EOs 254, 255, 256 [all located at the Burke County School Site] were located in the construction project area and were expected to be impacted by improvement activities. Of these, 286 were moved to a 6.1 acre protected area on-site in 2006 (Wells 2006 in G06WEL01NCUS). 210 plants observed in June 2006 (Boaze, 2006) [C. Wells, FWS copy of Management Plan].

Contacts

Contact ID	Individual Name	Institution Name	EO Contact Note

Monitoring Needs Comments Site is subject to permanent protection agreement with Burke County and Burke County Public Schools System. Fish and Wildlife Associates are to monitor first two of five years, and train representative from School System to monitor consistent with their methods in years 3-5. [C. Wells, USFWS, notes from files. Impacts discussed further in FWS consultation files, reference log number 4-2-06-020.]

Research Needs Comments

EO Rank

EO Rank Factor Survey Data

Condition of EO

Condition Rating

Size of EO 376 plants plus a "considerable" number that were not counted/monitored (2009). 341 plants plus a "considerable" number that were not counted/monitored (2009). 379 plants (2008). 210 plants (2006)

Landscape Context

EO Rank C? - Possibly fair estimated viability **EO Origin Subrank** r - Reintroduced/restored

EO Rank Date 2010-05-26

EO Rank Comments Appears area surrounding occurrence was disturbed in the past, based on 1998 aerial photos. This assumption was used in assigning the rank. Because a description of habitat was not reported, the rank should be refined as additional information becomes available. Rank specs followed: 200- 500 clumps occurring in less than one acre of high quality forest or on land impacted by human disturbance such as logging, grazing, mowing, etc. (Mason 2006).

Survey Site

Survey Site Name
Catawba River: Hoyle Crk-Micol Crk, ravine E of Hoyle Crk, East Burke High School (Sub EO of EO 178)

Directions

Catawba River: Hoyle Crk-Micol Crk, ravine east of Hoyle Creek, drains into a tributary to the Catawba River. This is a sub EO of Parent EO 178. [Note: it is unclear in Boaze (2008) whether this is considered part of the riparian relocation area represented by EO 256. NHP assumed it was not when these occurrences were mapped because a separate plant count was provided with the shapefiles].

EO Data 2006: A total of 515 plants, scattered between EOs 254, 255, 256 [all located at the Burke County School Site] were located in the construction project area and were expected to be impacted by improvement activities. Of these, 286 were moved to a 6.1 acre protected area on-site in 2006 (Wells 2006 in G06WEL01NCUS). 155 plants observed in June 2006 (Boaze, 2006) [C. Wells, FWS copy of Management Plan.]

Contacts

Contact ID	Individual Name	Institution Name	EO Contact Note

Monitoring Needs Comments Site is subject to permanent protection agreement with Burke County and Burke County Public Schools System. Fish and Wildlife Associates are to monitor first two of five years, and train representative from School System to monitor consistent with their methods in years 3-5. [C. Wells, USFWS, notes from files. Impacts discussed further in FWS consultation files, reference log number 4-2-06-020.]

Condition Rating

Size of EO 155 plants (2006)

Landscape Context

EO Rank D - Poor estimated viability **EO Origin Subrank**

EO Rank Date 2006-06

EO Rank Comments Appears area surrounding occurrence was disturbed in the past, based on 1998 aerial photos. This assumption was used in assigning the rank. Because a description of habitat was not reported, the rank should be refined as additional information becomes available. Rank specs followed: less than 200 clumps occurring in less than one acre of high quality forest or on land impacted by human disturbance such as logging, grazing, mowing, etc. (Mason 2006).

EO Data Monitoring data - 2010: Total of 168+ plants: 44 resident (37 alive with leaves + 7 alive without leaves) and 124 relocated (87 alive + 37 alive without leaves) plants observed at this site by Boaze on 26 May 2010. Many unflagged plants were also present (Boaze 2010).
2009: Total of 173+ plants: 48 resident (42 alive with leaves + 6 alive without leaves) and 125 relocated (97 alive + 28 alive without leaves) plants observed at this site by Boaze on 01 June 2009. Eight of the relocated plants appeared to have reproduced with rhizomes; many unflagged plants were also present (Boaze 2009).
2008: Total of 174 plants: 49 resident (44 alive + 5 alive without leaves) and 125 relocated (108 alive + 17 alive without leaves) plants observed at this site by Boaze in May 2008. No flowers present (Boaze 2008).
2007: 52 resident plants observed at this site by Boaze in May 2007 [no report on the number of relocated plants still alive] (Boaze 2008).
2006: Total of 190 plants: 59 resident and 131 relocated plants observed at this site by Boaze in July 2006. No flowers present (Boaze 2008). A total of 515 plants, scattered between EOs 254, 255, 256 [all located at the Burke County School Site] were located in the construction project area and were expected to be impacted by improvement activities. Of these, 286 were moved to a 6.1 acre protected area on-site in 2006 (Wells 2006 in G06WEL01NCUS). 186 plants observed by Boaze in June 2006 (Boaze, 2006) [C. Wells, FWS copy of Management Plan.]

Condition of EO

Condition Rating
Size of EO 012: Gate locked (2005); Over 1,000 plants (Gaddy 1981)
242: 04 plants (2005).
269:200+ clumps occurring over a .73 acre area (2007).
270: 75-100+ clumps area just over and acre (2007).
Landscape Context 269: Good condition along the stream and adjacent slope with poor to fair conditions up along the ridge.
270: Poor to fair. Immature forests with nearby pastures and some residental development.

EO Rank AB - Excellent or good estimated viability **EO Origin Subrank**

EO Rank Date 2007
EO Rank Comments Possibly not more than 500 plants in entire site based on dated information in subEO 012 (Robinson 2016)

Description

EO Type
General Description Population EE is dominated by a Mesic Mixed Hardwood Forest (Piedmont Subtype) community on eastern side of Sandy Run Creek. A small steep sided drainage bisects the population area. Plants are located on southwest facing aspects. This low/mid
slope area is well stratified. Kalmia latifolia and Fagus grandiflora are the two dominant plants in this population. Medium quality habitat is present at this location.

Min. Elevation	650.00	**feet**	198.12	**meters**

Survey Date 2012-03-15
Last Observation Date 2012-03-15 **First Observation Date** 1981-05
EO Data 2012: This site was visited in March 2012 as part of a site visit with NCDOT, USFWS, and ASU. Estiamated 200+ plants along slopes (Padgett 2015).
-- No information, GIS data submitted by Padgett in November 2005 (Wichmann 2005).
1995: Data for this EO and EO 014 lumped together by Newberry; 20 clumps observed at both EOs in 1995 but heavy tree fall had made the area hard to survey (Newberry 1996).
1981: This occurrence and EO 014 observed by Gaddy in May 1981. This occurrence and EO 014 observed by Gaddy in May 1981. Data for this EO and EO 014 lumped together by Gaddy; nearly 200 clumps observed at both EOs (Gaddy 1981).

Survey Date 2012-04-01

Last Observation Date 2012-04-01 **First Observation Date** 2001

EO Data 2012: 2326 plants counted in populations Q, R, S, T, U, W, X, Y, and Z by NCDOT biologists 28, 29 March to 1 April 2012 (Bassette 2015).
2012: Wagner et al. counted 40 plants on 3 March 2012. Few scattered small plants. Almost no larger plants. None in full bloom. Nice site except for moderate erosion and ice storm damage. (Wagner 2012).
2008: 1,758 plants counted by NCDOT biologists in April 2008 (Bassette 2009).
2001: 1,698 plants observed by NC DOT in 2001 (Bassette 2003).

Separation Comments

Parent EO 232 consists of sub occurrences along Buffalo Creek above Kings Mountain Lake. Parent EOs 214, 216, and 232 occur in an arc along Kings Mountain Lake and its tributaries, and are located within 2 km of each other in a landscape dissected by roads and scattered development. EO 85 occurs 2.1 km to the north; sub EO28 of Parent EO 216 occurs along Long Creek and is separated by 2.6 km as measured along suitable riparian habitat and by 1.6 km straight line across unsuitable habitat (Amoroso 2015).

Element Occurrence Report

EO ID 22324 **Subnational Scientific Name** *Hexastylis naniflora* **Shape_ID** 62320

EO Data Approximately 10% of the plants that were to be impacted from the asphalt plant, and were moved within the larger part of the population (USFWS 2007). Wells reported 500-550 plants in 2006, all of which are expected to be impacted by construction activities. Off-site mitigation is to occur [i.e. the plants are to be moved to a protected area off-site] (Wells 2006 [G06WEL01NCUS]). Estimate 300-400 plants over 0.13 mile along small unnamed tributary of Hogpen Branch (Padgett 2005).

EO Rank Factor Survey Data

Condition of EO

Condition Rating

Size of EO Unknown (2015). Estimate 300-400 plants over 0.13 mile (Padgett 2005)

Landscape Context Surrounding habitat has been destroyed by commercial development, indirect impacts unknown (Robinson 2015). The landscape around this site varies greatly with a cutover to the north and west, a home and numerous invasives to the south (Padgett 2005).

EO Rank C? - Possibly fair estimated viability **EO Origin Subrank** r - Reintroduced/restored

EO Rank Date 2007

EO Rank Comments Part of the population was transplanted from within the impact area of an asphalt and gravel plant to the larger population prior to construction (USFWS 2007). This population is thought to have been moved to a small area on the tract prior to development, but details are unknown (Robinson 2015). EO rank based on EO rank specs written for this species (Padgett 2005).

EO Rank Specifications Version Used

Description

EO Type

General Description Immediately adjacent to new gravel and aphalt quarry, based on aerial imagery observations (Robinson 2015).
Dry-Mesic Oak-Hickory Forest encrouched by invasive species to the south and improved quality to the north. Quercus alba, Lirisdendron tulipifera, Carya tomentosa, and Acer rubrum dominant in the canopy. The understory/shrub layer is sparse with Oxydendrum aboreum, Cornus florida, Nyssa sylvatica, Viburnum nudiflorum, Ilex opaca, and Smilax glauca. The herb layer is sparse throughout with Hypericum sp., sanicula canadense, Passiflora lutea, Desmodium sp., Helianthus sp., Aristolochia serpentaria, Polystichum acrostichoides. Invasive species inlcude: Rosa multiflora, Ligusicum sinense, and Hedera helix. The landscape around this site varies greatly with a cutover to the north and west, a home and numerous invasives to the south (Padgett 2005).

Element Occurrence Report

EO ID 22306 **Subnational Scientific Name** *Hexastylis naniflora* **Shape_ID** 62112

Survey Date 2014-04-19
Last Observation Date 2014-04-19 **First Observation Date** 2003-04
EO Data Golder Associates collected data between 14-19 April 2014, from 15-0.1 acre monitoring plots during 2014. Plants were decreased to estimated 505 plants per acre, and approximately 16,463 plants within the entire tract (Golder 2014). Numerous plants occurring throughout the site in maturing forest. Vegetative plants were observed on 7-27-2006. (Padgett). Wells reported 30,780 plants were observed by Golder Associates Inc. staff in 2006. Of these, 6,150 were estimated to be impacted by construction activities; 30,780 plants are to be protected on-site in a 260 acre conservation area (Wells 2006). Approximately 28,712 individuals over 32.55 acres, determined by multiplying the average plant desity in plots (822 plants/acre) by the total area occupied (32.55 acres): 1,323 individual plants counted in fifteen 0.1 acre monitoring plots established over 32.55 acres in June 2005 (Golder Associates 2005). 16,000-19,000 clumps in about 33 acres reported by J. Gay et al. in April 2003. Plants in flower; some flowers sent to experts to confirm identification. H. heterophylla may be co-habitating at the same drainages (Gay 2003).

Additional Topics

General Comments Specimens collected by Moye in 2007 were sent to L. L. Gaddy for confirmation (Moye & Gaddy correspondence 2007). Specimens sent to and confirmed by both Gaddy and Padgett in 2004 (Padgett 2008).

Additonal Topics Population decline from 2009 to 2014 is believed to be a response to the severe drought that occurred in this region during 2007 and 2008. Predation on the plants, presumably by woodland voles, was also noticed as a continuing phenomenon during this monitoring effort; it is now judged an observable part of the reduction in the population. Four of the plots were impacted by a wildfire during the winter of 2009 and not sampled at that time. Results from the current survey indicate that the fire has reduced growth and vigor for the plants located within these plots. An unusually cold winter and prolonged cool spring has also contributed to lower leaf and flower counts (Golder Associates 2014).

"Republic Services of NC, LLC (Republic) obtained Permit 200231111 from the U. S. Army Corps of Engineers under Section 404 of the Clean Water Act in December 2004 for discharge of fill into wetlands and streams in order to expand the Foothills Solid Waste Landfill in Caldwell County, NC. The expansion will impact sub-populations of Hexastylis naniflora...Republic proposed to mitigate the impacts to H. naniflora by preserving other sub-populations within 260 acres conservation easement on property owned by Caldwell County adjacent to the Foothills Landfill expansion (Golder Associates 2005).

EO Rank Date 2006-10-25

EO Rank Comments

EO Rank Specifications Version Used

Description

EO Type

General Description Dense white pine stand, approximately 20-30 years old. Habitat in this location is severely degraded with very dense shade from the young pines and very suppressed understory. Associated species include Pinus strobus, Fagus grandifolia, Cornus florida, Hamamelis virginiana, Toxicodendron radicans, Galax urceolata, Ilex opaca, and a small amount of Ligustrum sinense around the edges of the population (Franklin 2006).

Min. Elevation	1,160.00	**feet**	353.57	**meters**
Max. Elevation	1,210.00	**feet**	368.81	**meters**
Observed Area	5.00	**acres**	2.02	**hectares**

Protection

COSEWIC Status

More Land N - No **More Protection** Y - Yes **TNC involvement**

Protection Comments Duke Energy has protected this population by placing a conservation buffer surrounding the areas inhabited by Hexastylis naniflora (McCracken pers. comm. to Franklin 2006). It is unknown whether this is a permanently binding agreement and who will hold the easement in the long term.

EO Data 2006: 156 clumps counted during casual survey (more plants surely present) on 25 October 2006 by Franklin & McCracken; most plants seen were very depauperate, probably due to dense shade from young pines (Franklin 2006).
2003: Approximately 300 plants seen during late March-early April (Wolf 2003).

Contacts

Contact ID	Individual Name	Institution Name	EO Contact Note

Monitoring Needs Comments McCracken (Devine Tarbell & Associates, Inc.) established 3 permanent monitoring plots in this area to monitor survivability over time. Plot centroid coordinates taken by Franklin (2006): Not processed per agreement with Plaintiff/Requester (all NC State Plane, NAD 1983).

EO Rank Specifications Version Used

Description

EO Type

General Description Dense white pine stand, approximately 30 years old. Habitat in this location is severely degraded with very dense shade from the young pines and very suppressed understory. Associated species include Pinus strobus, Cornus florida, Liriodendron tulipifera, Liquidambar styraciflua, Kalmia latifolia, Galax urceolata, Ilex opaca, Polystichum acrostichoides, Quercus alba, Goodyera sp., Sassafras albidum, Mitchella repens, and Cypripedium acaule (Franklin 2006).

Protection Comments Duke Energy has protected this population by placing a conservation buffer surrounding the areas inhabited by Hexastylis naniflora (McCracken pers. comm. to Franklin 2006). It is unknown whether this is a permanently binding agreement and who will hold the easement in the long term.

MA/Ownership

More Management Y - Yes

Element Occurrence Report

EO ID 22281 **Subnational Scientific Name** *Hexastylis naniflora* **Shape_ID** 61973

Management Comments This population would benefit from thinning of the white pine stand and allowing the natural community to regenerate. The pines are obviously suppressing the population as well as the natural community (Franklin 2006).

Ownership

Owner Type	Owner Name	Owner Note
Corporation	Duke Energy	Contact James McCracken, consultant, for access to occurrence.

OwnerInfo_BCD N

Additional Topics

General Comments A small portion of this population may have been negatively affected by siltation from a nearby large-scale soil moving project. This problem was quickly discovered by Duke Energy staff, soil deposits were removed, and silt-fencing was installed to prevent further siltation. Likely fewer than 10 plants Hexastylis naniflora plants were affected by this incident (Franklin 2006).

Parent EO 216 consists of sub occurrences along tributaries to Kings Mountain Lake. Parent EOs 214, 216, and 232 occur in an arc along Kings Mountain Lake and its tributaries, and are located within 2 km of each other in a landscape dissected by roads and scattered development (Amoroso 2015). All sub EOs are located within 2.0 kilometers of one another and are not separated by an area of persistently unsuitable habitat greater than 1.0 kilometer wide (Wichmann 2005). See map for details.
