**This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.**

All of the information resulting from trapping by NPPD contractors is true yet it is also false because false enticement was used to indicate derivative information proclaimed to be facts.

It may be true to show derived results but in reality beetles from miles around came to the traps. Results convey only a partial unreal perspective.

Beetles thrive because they are spread about. Consider it to be beetle distancing.

To force them into a constricted and so-called mitigation site will diminish species survival and vitality.

And, when a federal judge issues a legal finding that is the law that needs to be followed. Anything otherwise is a violation of the law and the perps need to be charged and dealt with in proper accordance?

Beetles are a public resource and now really deserve public attention and consideration especially as their lives are being disrupted, once again, by minions

trapping them at their home land.

This needs to stop, NOW.
