Did you want to respond as an office for this? Here are my thoughts of things to include in case you do.

The 5-year status review for the grizzly bear in the lower-48 States, and the accompanying species status assessment, will be available on our website by the end of March to meet a settlement agreement deadline. CBD has given notice that they intend to appeal our win in the recovery plan litigation. We continue to assist in several other litigation cases and respond to FOIAs. We will update the SSA with 2020 data and post a new version later this year so that it is a living document of the best available science. We are preparing for the upcoming field season. This year's field season will include a pilot project of DNA surveys in southwest Montana to detect grizzly bears in areas between the Bitterroot and the current distributions in the GYE and NCDE.

I'm not sure about including other small items, I don't want them to think we aren't doing anything! Other small items include research projects, such as the army cutworm moth I'm currently working on and the larger stable isotope project we're putting in funding for, revisions to the GYE Conservation Strategy, transitioning to ArcGIS Pro, updating our website and ECOS, and implementing use of Zotero.

Happy March!

Please send me any info you'd like to share with the group this month! I'll compile it and send out prior to the All-Staff Meeting on Wednesday.

Knowledge Sharing

- Did you solve a problem whose resolution you want to share with folks?
- Do you need help on an issue or project?
- Just want to share?
