Absolutely. We have been coordinating and planning all winter and have various options we will take depending on where she goes, what she does, and whether the family group stays in tact or splits up. Bottom line is we will continue to manage 399 as we have in the past but believe we should not grant that same level of management to her 4 yearlings. In other words, we would treat them like any other grizzly bear.

See below....I will find some time on your schedule in the next week or two to brief you on our plans for management to make sure you are good with our approach.

Just heard from GTNP that is 399 and family awake. Collar data indicates localized movements around the den site yesterday.
