

## Coachella Valley MSHCP

## **Balancing Economic Development and Wildlife Conservation**

The Coachella Valley Multiple Species Habitat Conservation Plan (CVMSHCP) is the most recent regional HCP completed in southern California. It represents a successful partnership among public and private landowners, and the Service to establish a **permanent habitat reserve and perpetual land management program** while accommodating for urban development and recreational use in central Riverside County. In the planning stages for more than a decade, this regional HCP includes large tracts of adjoining lands owned by the Bureau of Land Management, Forest Service, National Park Service, and the California Department of Parks and Recreation.

## The benefits provided by this MSHCP are:

- 1) Provide streamlined environmental reviews;
- 2) Provide long-term conservation of native species and their habitats;
- 3) Lands conserved through implementation of the plan may provide for additional public recreation opportunities;
- 4) Newly designated conservation lands will now complement over 550,000 acres of already existing, conserved or publicly-owned lands and be monitored and managed together, in perpetuity, by permittees under the same guidelines and processes outlined within this plan; and
- 5) Enhanced predictability about future Federal, state, and local regulations.

## Just the Plan Facts:

- Plan was approved in 2008 75 year permit
- Participating jurisdictions: 8 cities, County of Riverside, and several local agencies and organizations
- Planning area covers 1.1 million acres
- Plan creates 125,000 acres of new conservation lands for the preserve system bringing the total sum of conservation lands to over 680,000 acres
- 27 different species are covered, of which 10 are federally listed

Coachella Valley fringe-toed lizard USFWS/JBuegge

- Additional anticipated conservation lands by partner agencies will bring the grand total to over 720,000 acres
- Lands for the reserve system are to be acquired from willing sellers over the next 30 years
- Habitat and focal species covered under the plan include: sand dune systems, desert scrub communities, chaparral, marsh communities, riparian ecosystems, Coachella Valley fringe-toed lizard, Coachella Valley milk-vetch, desert tortoise, Peninsular bighorn sheep, burrowing owl, least Bells vireo, and southwestern willow flycatcher.
