Yes the less than or equal sign. Just a heads up that this is important issue. See the note concerning what was in Dan Ashe's September 15 letter under both Table 1 and Table 2 in the proposed rule. The agreement summarized in that letter was that if the population was less than 674, that independent female and dependent young mortality would be less than 7.6%.

c

Are you referring to the less than or equal to sign? I believe it was a revision of the table that had 674 column singled out where the rate would be 7.6%. This is something we could address during public comment period.
