Comments: HI; just read the article in the Seattle Times (4-21-16)about the removal of federal protection of grizzlies in Yellowstone.This is a mistake; Yellowstone is an island of protection for them and is one of the few places that provides protected and adequate habitat. To sustain the species and continue to increase their numbers up to their original population additional protection is needed in Yellowstone and the adjacent states. As a big-game hunter for over 30 years, I realize how special and unique they really are in our western ecosystems. Thank You. Joe Simmler
