The goal of Recovery Criterion 1 is supposed to be centered around maintaining population size above 500 for genetic viability reproduction etcetera. Why wouldn't we just have a figure demonstrating that the population has been above 500 for multiple years??

I apologize that I had to jump to another call. Attached is the proposed new Figure 3 for Chapter 2. Please let me know if you have any suggested edits to it.

Subject: FW: Population management sub-group assignment

I would like to have a conference call for 30 minutes to discuss what, if any, of the proposed changes should be forwarded to the steering committee. Please let me know what time you are available to discuss the attached FCOY proposed changes-please list your available time blocks on the following 2 days.

July 20-Wednesday morning
July 27-Wednesday afternoon

Subject: Population management sub-group assignment

Population Sub-Group Members;

The YES Steering Committee met on May 31st and reviewed our Sub-Group report and recommendations. Our Population Sub-Group asked for additional time to make clarifying edits to portions of Chapter 2 and Appendix C to clear up confusion based on mixed language relating to females with coy, cubs-of-the-year, and young (pages 6, 22, 33-35, 37-40, and 50). Sub-Group members Dan Thompson (Wyoming) and Jennifer Fortin-Noreus (USFWS) worked together with Frank VanManen (IGBST) to provide these attached edits that should improve consistency. The reviewers also substituted a different figure that represents “model averaged” number of females with cubs-of-the-year on pages 37-38. This is more representative of what is being stated in Recovery Criterion 1.
Please review and provide me with your feedback by the end of this week, it should go

quickly-changes are noted with track changes in both word documents. If you need additional time, just let me know, thanks for your review in advance, Jeff.
