Kathy Ake responded and they also only track single points although they do have polygons for some of their developed sites.

Jennifer, no we do not have footprints. This has always been a conundrum with developed sites - they have always been represented as a mere point. It may be a simple patrol cabin in the back country, or a major developed site (which may include multiple buildings) - they are all portrayed as points. In fact, when I inherited this database, there wasn't even a geometry point for many of the sites. The most complete record of developed sites exists in an Excel spreadsheet. I believe the entire concept of developed sites need to be revisited for the next review of the CS.

Do we have an accurate measurement of the footprint of developed sites for the 1998 baseline? Thanks!
