The report I received from NPS was that the states were unwilling to revise the Conservation Strategy to require that in the event that a new population estimating methodology is developed, discretionary mortality will still be determined based on the Chao2 estimated population. Is that how FWS interpreted yesterday's discussion as well? Thanks and best wishes.

Subject:	RE: Yesterday's YES meeting

I don't think that's completely accurate. I got the impression that the states intend to implement the proposed mortality limits table independent of the population estimate method. If they intend to continue implementing the mortality limits based on Chao2 estimate even if a new method is available this wouldn't be such a big issue but that isn't that their intent.
