Hi Jennifer,

Just to be clear on our task, I assume FWS wants us to address all relevant issues brought up in the comments and have those reflected in the texts of the PR and CS? To properly address these comments will require quite a bit of added language. Not a problem from our end but I know there is a balance between detail and clarity so I guess I'm just trying to gauge the level of detail that you guys are looking for.....

Frank

I have attached the first issue identified along with the relevant text from the proposed rule and the conservation strategy. Feel free to separate this issue into more than one issue depending on your recommendations for summary, potential edits, and responses. Please let me know if you have any questions.
