Good question; the answer is no though. This number reflects the ratio of M:F for **mortalities**, not of the general population. Mark and I discussed that we should probably update/verify this ratio though....we'll let you know if this number has changed.

hey Frank!

In the application protocol, for criterion #3, step #7 says the ratio of independent males to females is .59:41. Should this be 1:1 to reflect the new demographic analyses?

Chris,

Attached are my comments on both documents. Let me know if we need to follow up with a call, I'll be around all week.

Cheers,

Frank

Subject: protocol review

Hi Guys,

If you could get your review of the protocol back to us today that would be very helpful as our times are getting short due to Christmas.

Thanks,

Chris
