Subject: report availability

Hi Mary,

Are you going to send out a note to all YES members and the YES mailing list on the availability of this report on the IGBST website? I ask because several NGOs know this report was in preparation and I would suggest that YES is a good source for public notification that this report is complete and available on the IGBST website.

Thanks,
Chris

Hi Mary,

We just finished a report summarizing the findings of 3 IGBST workshops held in 2011 and 2012, providing the detailed scientific background for topics discussed at the spring YES meeting: 1) proposed changes to methods to estimate grizzly bear population size, 2) proposed revision of mortality limits based on demographic analyses for the 2002-2011 period, and 3) proposed revision of boundary within which mortalities are counted. Would you mind notifying the YES subcommittee of the availability of this report?

The report can be found at: <http://www.nrmssc.usgs.gov/files/norock/IGBST/GYEGBMonMortWksRpt2012.pdf>

Please let me know if you have any questions regarding the report. I look forward to seeing you at the YES meeting in November.

Best regards,

Frank
