

Subcommittee Proposal (9/12/16)

Proposed revisit of Habitat Standards and the 1998 Baseline

Since 1998, visitor use in National Park lands and surrounding ~~federal public~~ ~~National Forest~~ lands has increased significantly. During this time we ~~have witnessed~~ ~~there was~~ a significant increase in grizzly bear numbers and occupied range such that ~~we have~~ ~~there are~~ more bears in more places. Adherence to the habitat standards and its associated sideboards to human activities has contributed to the successful recovery of the GYE grizzly bear population. However, the habitat standards associated with the 1998 baseline and the administrative mandates to manage for increased visitation have not kept pace with the recent changes in a manner that allows ~~the stewards of these lands~~ ~~land managers~~ to responsibly accommodate the current, and likely future, increase in visitor use. ~~while still ensuring bear habitat and bears are protected. For example, lack of additional managed capacity for visitors leads to increased dispersed and less regulated activity in bear habitat, which can lead to increased bear human conflicts.~~ – For example, the steady increase in visitor numbers may necessitate more administrative infrastructure to strategically manage the impacts of more people on the landscape while ensuring the continued protection of grizzly bears and their habitat. ~~In light of such recent changes~~ ~~Therefore~~, it is necessary to reconsider ~~the our~~ role and responsibility for stewardship and resource management of public lands ~~inside the PCA and~~ throughout the GYE, ~~and more importantly inside the PCA. It is reasonable at this time to consider~~ ~~Specifically~~, how ~~could~~ future modifications to the 1998 baseline standards ~~could~~ be designed ~~in such a manner so~~ that increased ~~pressures on the landscape~~ ~~visitation~~ can be addressed without threatening the habitat and population gains ~~we have~~ ~~that have been~~ secured. ~~–?~~ As such, it is proposed that a multi-agency effort be conducted to determine the best long-term solutions for alleviating administrative pressures associated with increased visitation. Any future management changes proposed in this effort will be evaluated in a cooperative and meaningful manner with full consideration to long-term consequences. Proposed modifications will minimize deviations to the 1998 baseline. A multi-agency planning group will be established to carry out this re-evaluation effort on or before the end of calendar year 2018. Production of a draft document enumerating proposed revisions to the 1998 habitat standards will be released for public comment and approved by the YGCC. The final revision document must be agreeable to each of the affected federal land management agencies represented on the YES, including the National

Comment [LLA-1]: Yes.

Comment [LLA-2]: Ken, I appreciate your intention, but I'm not sure this addresses the real problem. The likelihood that an increase in visitors leads to more dispersed sites is not really a problem inside the Parks. Instead, it is more problematic with FS land; and this has already been addressed in the 2016 Developed Sites Application Rules for dispersed sites. The primary problem that needs to be resolved in the future is 1) the need for more Park infrastructure to accommodate more visitors (i.e. new parking lots at the entrance stations in the eventuality that the number of vehicles is restricted in the future and people are encouraged to take Park Transit); and 2) perhaps more housing/admin buildings to accommodate more staff to manage increased visitors.

Park Service, U.S. Forest Service, Bureau of Land Management, ~~as well as~~ the U.S. Fish and Wildlife Service.

Comment [LLA-3]: Yes.

Timeline of Habitat Standard revisions to be completed on or before the end of calendar year 2018

January 2017	<p>Establish the planning group to review and propose revisions to the Habitat Standards. Participants should include representatives from the National Park Service (Kerry Gunther), Forest Service (Dan Tyers and Lisa Landenburger), Fish and Wildlife Service (Jennifer Fortin-Noreus), Bureau of Land Management, and the states of Idaho, Wyoming, and Montana.</p> <p>Assign a contact from each administrative unit to assist in a timely manner with GIS tasks associated with creating a new developed sites database.</p>
Spring/Summer 2017	<p>Workshops to discuss the issues:</p> <p>Definition of major versus minor developed site?</p> <p>How will the footprint of developed sites be measured?</p> <p>What level of change is acceptable? (i.e., buffer around developed site)</p> <p>How will mitigation be defined? (i.e., increased law enforcement, habitat quality of area impacted, etc.)</p>
Winter 2017	<p>Agencies compile and deliver necessary data documenting footprint and human-use capacity of developed sites to Lisa Landenburger for construction of new baseline database</p>
Spring 2018	<p>Production of draft 1998 revisions for public comment</p>
July 2018	<p>30 day public comment period</p>
August-October 2018	<p>Summarize and respond to public comments</p>
