Lisa,

That assumption is correct. I will keep you updated if I hear of any updates to the language in these proposals.

Have a great weekend!
Jennifer

Subject: Appendix C Alternatives - need quick clarification

Jennifer,

Dave Schmid (USFS Region 1, Deputy Regional Forester) has requested that Dan & I craft a summary of the various alternatives proposed by the population subcommittee in time for a call next week between regional & Washington FS leadership. I want to be certain I interpret things correctly, and in light of this I have a question pertaining to the USFWS language in Alternative B:

“ ... The new average population estimate and the lower and upper 95% confidence intervals **that correspond** to the model-averaged Chao2 population estimates would be inserted ...”

I tend to interpret this as saying the new confidence intervals derived from the Chao2 model would be inserted in Table 2. However, I'm assuming the intent is to say that the new confidence intervals *comparable to those derived from* the Chao2 as opposed to those *derived from* the Chao2 estimator ... will be inserted in Table 2. Is this assumption correct?

Thanks as always Jennifer!
