---

Here's an updated version that I hope addresses your request with some extra language at the end. We have qualitative info that supports this point (increasing proportions of mortalities and conflicts outside the DMA) but I don't think it is conducive to get into that for this statement.

I made a few additional (minor) edits.

See what you think...I've copied Mark in case he has additional thoughts.

Thanks!

Frank

Thank you for drafting language on the population status so quickly. Would it be possible to add clarification to the last sentence about range expansion outside the DMA? Something that more directly addresses the concern that the same number of bears are occupying a larger area. Possibly something about the population potentially expanding outside the DMA although it isn't assessed?

Jennifer,

Please delete the previous version, attached is the correct version....

Frank
