Marilyn Kohn	Marilyn	Kohn	mlynn.kohn@yahoo.com	622 Sheldon Ave	Columbus	OH	43207	3/7/2016	<p>I am writing to urge you to abandon delisting of the Yellowstone grizzly bear. The proposal to remove Yellowstone grizzly bears from the endangered species list will reverse the progress made toward bear recovery. The Yellowstone grizzlies cannot hold their own without</p> <p>The Greater Yellowstone grizzly bear is an icon of Americas wild places. It has been held sacred by native communities for thousands of years. Yellowstone National Park is vital to the local economy in large part because visitors enter the park hoping to spot this magnificent would be a loss on many levels and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their the success of their recovery is hardly assured. Grizzly bears occupy less than 2% of their historic range in the lower 48states. They reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the decline since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies vulnerable to destruction. Most Americans fear them and states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks states, which have historically been hostile to bears and other large carnivores. It allows eradication of grizzlies in some areas.</p> <p>Most trophy hunters can't tell the difference between a male and female bear and the indiscriminate killing of female grizzlies would cause a steep, quick decline in the grizzly population. Since the Yellowstone grizzly population is isolated further limiting their range and numbers connecting to other grizzly populations, resulting in a limited gene pool and inbreeding.</p> <p>We should not let bears slide back towards extinction because of misplaced hostility and fear towards these magnificent and powerful creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their continued recovery.</p> <p>Thank you for considering my views about the lives and health of these powerful creatures.</p>

Monique Pamatian	Monique M.	Eisenberg-Pamatian	moniquepamatian@yahoo.com				97103	3/25/2016	<p>I speak on behalf of those who can not speak for themselves. Animals, especially our predators such as wolves, bears and coyotes as well as their prey of course, are a very important part of our ecological system and I am going to be using certain words and phrases repeatedly to make my points perfectly clear.</p> <p>Habitats are being either too regulated or not regulated enough by man and the government, who are not taking the precautions or considerations as to how our natural habitats are being destroyed in the name of economical reasons and unnecessary expansion.</p> <p>These animals would also not be deemed as such a threat if their habitats were protected by stricter laws and regulations. MUCH stricter consequences for breaking these laws are an absolute necessity.</p> <p>These laws are not currently enforced enough or have harsh enough consequences for society to take these rules seriously enough to see the importance of the protection of wildlife. The natural balance that our world depends on humanity to be aware of and made known should be addressed.</p> <p>Without strict laws, regulations and penalties for the financial gain of corporations, commercial and residential industries, who do not seem to know or care about the importance of our natural habitats and the roles they serve in our daily lives, have become out of control and become seriously and rapidly diminished or destroyed all together.</p> <p>Predators as well as prey are being forced into our residential and commercial communities and society is finding this to not only to be a nuisance but as a threat. This is ironic because our society is the actual cause for these behaviors in the first place.</p> <p>When land laws, reserves and wildlife are NOT protected the natural balance of habitats and wildlife are being unnecessarily destroyed. Without strict protection, many species that play important roles in our natural ecological system are being forced into extinction and our natural resources are increasingly and completely out of control. Importantly, too often society has lost the importance of wildlife in general.</p> <p>We, as human beings, need to strictly regulate land laws and the endangerment of species need to be enforced to ensure that natural habitats have enough boundaries to allow what nature has originally intended.</p>

The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p>

Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility toward these magnificent creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger,</p>

Michael & Libby Robold	Michael & Libby	Robold	mrobold000@centurytel.net	3512 Red School Rd	Kingsley	MI	49649	3/4/2016	<p>We are writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would be hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting would be particularly devastating, as they are the only ones to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>

Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Matt Summey	Matt	Summey	msummey@gmail.com	9444 Manorwood Dr	Mechanicsville	VA	23116	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth began in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Please... we need to protect our bears.</p>

Diana Myers	Diana	Myers	myersdgk5@gmail.com				60640	3/25/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Nancy Premier	Nancy	Premier	nancypremier@gmail.com	437 Huntington Rd	Kansas City	MO	64113	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Thank you.</p>

Nancy Reed	Nancy	Reed	nancyreed528@gmail.com	418 Provincetown Ln	Richardson	TX	75080	4/13/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Naomi Scheirich	Naomi	Scheirich	naomischeirich@gmail.com	7823 Wolf Pen Branch Rd	Prospect	KY	40059	4/12/2016	<p>Why is the U.S. Fish and Wildlife even considering delisting Grizzlies?!?! Is it just so Wyoming, Montana and Idaho hunters can go ripping through the parks and other lands killing them all for trophy hunting which is also happening with delisting the wolves. Like they have said, the Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies just like wolves have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, mainly in the form of trophy hunting, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery. This country or should I just say hunters in this country, just cannot realize that killing off the bear population is just despicable. Humans have destroyed the bear habitat for so long!!</p>

Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery. Without protection, I foresee slaughter and this is a short sighted policy for the future of bear population health and sustainability.</p>

The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>
Anne Nielsen	Anne	Nielsen	nielsena57@gmail.com	256 Rocco Ave Apt A	Harrisonburg	VA	22801	3/3/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth began in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery. Remember, they were in Yellowstone first.</p>

Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to o</p> <p>We know that people and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>I urge you to please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Thank you for your time and consideration.</p>
Nancy Smith	Nancy	Smith	nsmith902@yahoo.com	117 Claremont Ave	Buffalo	NY	14223	5/1/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. Anything that we do to remove them from the list, just doesn't make sense.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to o</p> <p>People and bears can coexist. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their recovery. I suggest you get off your lazy white asses & come to the table with the truth. Greedy white developers are stealing too much habitat. You want to kill these large mammals because it's an embarrassment of how piss poor a job you do. Not too many bears.....too many people close to the habitat. Simple solution. Stop greedy building, drilling, fracking. You know once all the animals are dead.....you're all out of a job.....that's how dumb you are.</p>

Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to o</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and e recovery.</p>

Joseph Dennis	Joseph	Dennis	onepixeljump@gmail.com	420 Loudon Pl	Brentwood	TN	37027	3/3/2016	So, who does this one benefit? It isn't the bears, so it must be someone else. Take a good hard look at why you're doing this and be just as honest with yourself as you should be with the public before answering. When it turns out your reasonings are a load of garbage, maybe a terrible idea.
Phillip Raymond	Phillip	Raymond	onfire@mac.com	2505 Avenida De Isidro	Santa Fe	NM	87505	3/3/2016	Respectfully . . . delisting is not an intelligent option ?? The world is crazy enough regarding the intelligent and necessary protections REQUIRED to keep the "KILL IT IF IT MOVES" contingent at moral bay. For god's sake, if you must delist something, make it the SNIPE or "The RARE AND ELUSIVE BLACK ANGUS". That's the only way to protect them before they figure out they've been had. Kind, yet troubled regards . . .
Maria Sammut-Mascaro	Maria	Sammut-MAscaro	otbnmalta@yahoo.com	100 Circle DR	Toms River	NJ	8753	5/1/2016	I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. It is doubly sad that the American Rhino is officially extinct. Stop killing off our Natural treasures The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region to see grizzlies, and grizzlies support local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them. While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies began in the early 2000s, and there was a 6% decline last year. The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave grizzlies and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting with other grizzly populations. People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.

Ormand Tegland	Ormand	Tegland	oteg@mac.com	401 W Rainbow Blvd	Big Bear City	CA	92314	3/4/2016	Please postpone delisting the Yellowstone grizzly bear population.
Mary O'Brien	Mary	O'Brien	otterbridge@att.net	5004 Barnaby Ct	Sacramento	CA	95842	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Pam Conley	Pam	Conley	pam_conley@q.com	POBox 2526	Boise	ID	83701	4/10/2016	<p>Now is not the time to delist the Yellowstone grizzly bear population due to the food problems they are/will experience due to climate change. The Bears are just starting to recover their numbers but the environment is changing in ways that can't guarantee this trend will continue. The bears are still only two percent of its historic range in the contiguous U.S. & reproduces very slowly. It would be tragic to quit protecting them until they are fully recovered. Their numbers declined last year so their population isn't stable enough yet.</p> <p>State management of the Bears would leave us back where we were before they were protected & with the downward trend in the bear's population we need to keep them all for genetic diversity.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Pat Hackbarth	Pat	Hackbarth	pathackbarth@earthlink.net	235 W 71st St	New York	NY	10023	3/6/2016	<p>While the Greater Yellowstone grizzly population may appear to have sufficient numbers at this time to be considered recovered, there are particular concerns about this population that make this a poor time to remove any protections from them.</p> <p>The Greater Yellowstone grizzly, having no access to the salmon that make up such a large part of the coastal grizzly's diet, are unusually dependent on such food sources as the whitebark pine, which as you know has been devastated in many areas by blister rust and the pine beetle. The grizzly has reduced this crop this crop in the bear's diet, but has forced them in many cases to scavenge more in human-inhabited areas, bringing them into deadly situations where they are so often the losers. With the many threats to our forests that have been intensified by climate change, the grizzly's unpredictable effects that may well further deplete this resource and its usefulness to species that depend on it.</p> <p>This is likely to result in more female bears who are unable to gain sufficient weight before denning and therefore cannot successfully carry a pregnancy, which further reduces the already low number of cubs likely to be born in any given year.</p> <p>And the state plans waiting in the wings will greatly endanger every bear who roams outside park boundaries, which will not only have a steep impact on bear numbers directly, but over time causes the population to become a genetic bottleneck, further reducing its viability.</p> <p>There are many reasons not to delist the grizzly at this time, and together their weight is far greater than that of the misinformation and misdirected hostility of those who are unwilling to consider better bear management plans as a way for humans and grizzlies to share space.</p> <p>I strongly urge you to scrap any plans to delist the Greater Yellowstone grizzly at this time. A poor idea with a lot of political support is still a poor idea.</p>

The loss of female grizzlies to trophy hunting, the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their survival.</p> <p>Thank you for your consideration.</p>
Patricia Stiller	Patricia	Stiller	patricia_stiller@yahoo.com				81212	4/1/2016	<p>Americans have worked too hard to protect this species from extinction to now reverse all that and potentially cause its extinction. Natural wildlife should come before human needs. I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the grizzly population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting, the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their survival.</p>

Patricia Collins	Patricia	Collins	patriciacollins@valornet.com	PO Box 282	Sanford	TX	79078	4/12/2016	<p>If you delist Grizzly bears and the states start killing them off a lot of work and time and taxpayer money will be wasted. It is fairly obvious that the states cannot be trusted with the future of these animals.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>I concur with all of the above! And, just to reiterate, it's premature to remove ESA protections for these magnificent icons, the Greater Yellowstone Grizzlies.</p>

Patricia Volland	Patricia	Volland	pawvolland@gmail.com	16421 Laurel Hill Road	Glenford	OH	43739	5/1/2016	<p>Yellowstone National Park is a true treasure for the American people. when visiting, we are always hoping to see a grizzly bear or wolf. Why, because they are so rare in this country. Yellowstone is their only hope of survival & now you want to remove them from the enda incomprehensible to me. Why do anything to change their status? they need protection.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

J Pence	J	Pence	pence@ufl.edu	318 SE 71st St	Gainesville	FL	32641	4/12/2016	<p>I saw my first grizzly bear in Yellowstone National Park on vacation with my parents in 1959. The image has stuck with me for my whole life. I was conservationist before I had heard the word. YOU and I know that WE ARE RESPONSIBLE for the mass extinction we are witnessing this life time.</p> <p>I have been researching endangered butterflies and bees for 20 years. YES, all things are connected. What's good for bees and butterflies is good for bears. WE know that changing weather patterns is making it difficult for bears to gain enough weight to hibernate. One exam mountains are not reproducing enough and grizzly bears can't find enough to fatten up for the winter. Climate change is taking a toll and the bears must have time to adjust. This could take generations! Take the long view. They were hear long before we were imagined. They can survive us IF WE protect them NOW.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery. My family and I most strongly oppose the Grizzly Bear population's planned removal from its 'endangered species' status. Wrong direction to follow. Foolhardy, human arrogance once again at work. Do not follow that irresponsible direction!!! Simply and unbelievably ignorant, i.e. stupid.Do not delist the iconic Grizzly Bears!</p>
Sue Compton	Sue	Compton	pettech@live.com				95033	3/25/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery-In fact, it will reverse that hardwon progress.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies- to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, leaving them hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p>

Michael Ciocchi	Michael	Ciocchi	pilsungforme@gmail.com				6074	3/27/2016	<p>I would like you to do your job. A government entity works for the people and I think if you surveyed " the people" you would see an overwhelming response to do whatever you can to save our nations Grizzlies. What benefit would there be to change their designation? Not change their designation. The Red Wolf situation shows me that the people making the decisions are not too competent. 50 wolves left out of how many? It's disgusting! Maybe it's time that the powers that be are demoted, or better yet, relieved of their Gov't duties. They occupy positions they are in. It's time for a change with the animals longevity being priority one! I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the r local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. Do everything you can to protect them. I loved seeing them at Yellowstone.</p>
Phil Knight	Phil	Knight	pknight@q.com	PO Box 6151	Bozeman	MT	59771	4/14/2016	<p>I am writing to demand that you postpone delisting of the Yellowstone grizzly bear population. This is not the time to take away the meager protections that grizzly bears enjoy in Greater Yellowstone.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. I make my living partly from showing people and Grand Teton national parks, and elsewhere. There is nothing like watching someone experience their first grizzly bear sighting. It is truly a lifetime experience, and Greater Yellowstone is one of the best places to see and learn about these magnificent animals.</p> <p>The loss of the grizzly would be a loss for the entire world, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>I personally have worked for 30 years to help keep the grizzly bear secure and to assure their small numbers continue to grow. We are on the brink now with this population and cannot afford to start letting them disappear again. Two of the crucial food sources for grizzlies are cutthroat trout, which is functionally extinct, and cutthroat trout are in deep decline. In addition, hundreds of bison are killed and exported from the ecosystem every year, essentially strip mining protein which could feed hundreds of bears. This forces bears to eat more elk and probably more livestock, increasing the risk of conflict with armed humans.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. A breeding female may take ten years to produce breeding offspring. In the Yellowstone region, the growth of the grizzly population has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The thought of people blasting away at grizzlies in some kind of sick sport hunt just makes me ill. Each bear killed is one less that people can enjoy over and over again, and one less to contribute to the recovery of the population.</p> <p>The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. This is inexcusable and smacks of poor, short sighted management.</p> <p>The loss of female grizzlies to trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations, which is supposed to be one of the goals of federal recovery.</p>

Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p> <p>Please stop trying to take animals off the protected list! They all need our help, in my eyes, because humans have taken over the earth. Once on the list think most animals should just stay there. In-humans should NEVER be allowed to hunt predators and then there would be no more predators. What a vicious cycle.</p>

Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery, also support the grey wolf and TNR for feral cats. Your agency has been a disappointment to animal lovers across America!</p>
Elizabeth Armenta	Elizabeth	Armenta	qtfishfly@aol.com	1737 E Forrest Ln	San Bernardino	CA	92404	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>We were in Yellowstone last fall and enjoyed the bears; the best part was the glee on the face of my little grandson (5 yrs old) seeing the bears & buffalos in close proximity. We just can't meddle with the equilibrium which nature has succeeded in maintaining. Protect the bears for future generations!!</p>
Rolanda (randi) Hoffmann	Rolanda (Randi)	Hoffmann	randi.hoffmann@yahoo.com	95 Rubina Ln Apt 12	Fond Du Lac	WI	54935	3/9/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. Rose Cook	Rose	Cook	rcook@biomonitoringrca.org	528 Spruce Street	Riverside	CA	92507	3/4/2016	<p>I am strongly opposed to your proposal to delist the Yellowstone grizzly bear population at this time and urge you to postpone any action in this regard at this time.</p> <p>After decades of recovery efforts, Grizzlies still occupy less than 2% of their former range in the lower 48 states. I do not believe this can even be considered a recovery yet. Grizzly bears still face numerous risks from habitat loss and climate change, and now, the hostile int their presence.</p> <p>I believe that delisting The Yellowstone Grizzly now would be harmful to its population. As you know, Grizzlies reproduce very slowly, with the population stable or declining since 2000. The current proposal would allow states to exceed maximum bear deaths for years be Grizzlies to a trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. These risks are real and pose a serious risk to the loss of genetic diversity, and the ability of the with other populations of Grizzlies.</p> <p>I strongly oppose the sport hunting of these magnificent animals. The states of Montana and Wyoming are extremely hostile to large carnivores, and I have no doubt that they would pursue a policy of radical population reduction as they have with the Gray wolf. Grizzly pop wolves, and this kind of persecution will set back conservation efforts dramatically.</p> <p>I believe the Grizzly bear is deserving of our respect and should not be the subject of cruel trophy hunts. I stand with the Native Americans of the Greater Yellowstone region in opposing such wanton carnage which I feel would not only harm bear populations but the reputat with a strong conservation ethic. How can we hope to encourage other nations to protect their carnivore populations if we treat ours with such loathing and disrespect. Trophy hunting of Yellowstone?s Grizzlies and those of the Greater Yellowstone Ecoregion would be a da of taxpayer dollars, and a slap in the face of every person who has donated money toward their conservation, conducted research, or paid a visit to the parks with the hope in their hearts of simply sighting one of these amazing animals.</p> <p>Our country is great when we do great things. Allowing Grizzly bears to be delisted at this time is a bad idea and shame on us if we do it.</p> <p>We can coexist with bears. We have been. There is no need to reduce their numbers as they are still struggling for recovery. We know the states cannot be trusted to manage them responsibly. I urge you to postpone a delisting. Create a plan that allows for a true recovery as would want.</p>
Bob Reavis	Bob	Reavis	rcreavis@comcast.net	642 E Mountain Sunrise Pl	Tucson	AZ	85704	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Bec Whiting	Bec	Whiting	rebeccajwhiting@gmail.com	14601 North Bybee Lake Court	Portland	OR	97203	4/12/2016	<p>Hi,</p> <p>My name is Rebecca Whiting and I'm a Melbourne zoology graduate with minors in geoscience and ecology. This allows me to urge you with all the benefits of science and knowledge NOT to remove ESA protection of the Grizzly bear.</p> <p>Grizzly Bears are top tier predators in Yellowstone National Park. They assist in controlling prey animal populations and also control the numbers of other predators such as wolves and coyotes through competition. They are vital in maintaining a stable, healthy ecosystem w</p> <p>Whilst Grizzly numbers may look good now but I urge you not to remove the protection on these animals until they have maintained these levels for several seasons. Bears are very slow breeding animals, usually only producing two young per season which really only repla the protections would also allow trophy hunters to begin attacking them again and hunters have a tendency to ignore limitations placed on them, legal or otherwise. It is likely that a hunter will not stop to check if the animal in their crosshairs is male or female and killing a fe the population instead of just one.</p> <p>So instead of removing the protections and then replacing them when bear numbers inevitably fall again, why not be proactive and wait until bear numbers are in surplus before altering their status. Don't let the type of people who put them in this situation in the first place ca Yellowstone National Park.</p>

Rebecca Rohrbach	Rebecca	Rohrbach	rerohr@windstream.net	79 Kauffman Rd	Oley	PA	19547	4/12/2016	<p>With Respect,</p> <p>The rescue and re-establishment of the Greater Yellowstone Grizzly is one of the west's greatest wildlife achievements. If proposed plans are put in place, any areas outside Yellowstone and Grand Teton National Parks could become grizzly hunting grounds, even in the J.D. Rockefeller Jr. Parkway connecting the parks. This and other grizzly passageways are critical to allow for different bear populations to create more stable populations.</p> <p>I am suggesting that the environmental and sustainable choice for the future generations of bear, the eco-system, and people who enjoy a diverse wilderness is for the U.S. Fish and Wildlife to stop the plan to remove Endangered Species protection from the Greater Yellowstone region.</p> <p>Thank you for your support, Rebecca Rohrbach rerohr@windstream.net</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery. It would behoove you to reassess your position on this disgusting plan you want to start. This GREAT BEAST is not one you should attack. It is one of our most iconic animals. I am sure the Native Americans and Native Canadians would tell you the same. The Wolves, Grizzly Bear, the bald eagle and the Buffalo should all be untouchable and the areas of their food supply maintained in a non-usable area for logging, land grabbers to do a good enough job on their own. That is why we will always have Forest fires. It is nature's way of replenishing the earth. So new growth can appear to replace old sections of land with new growth. And since we now know that trees and the growths on the ground talk to each other, let's let them be. You could be brought up on murder charges.</p>

Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Frederick Becker	Rick	Becker	rickbecker1946@yahoo.c om	149 Woodleaf	Pittsford	NY	14534	4/12/2016	<p>BTW, let me add that we have a lot of excess anacondas down in Florida if you have any Great White Hunters who need a challenge.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery. Please, remember extinction is forever. We need to preserve the balance of nature. Thank you.</p>
Rebecca Donatelle	Rebecca	Donatelle	rjd42@comcast.net	2795 SW Dearmond Dr	Corvallis	OR	97333	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. This is an absolute RED NECK hunters, who have to SHOOT something to preserve their manhood....We have decimated most defenseless wildlife in the wild today, destroyed their habitat and caused huge imbalances in species....Such DESTRUCTION is the ultimate form of SPECIES-ism. I have a list of over a hundred people on my list, all of whom have great love of these amazing animals...Perhaps some of these TROPHY-welding males should hunt each OTHER for sport....We are currently consuming the resources of nearly 2 planets...Let's hunt the species that finds sport in hunting weapons that don't give animals a chance....all the while thumping their chests....If populations get out of control in the future, issue limited hunting licenses, specifying humane kills.....NOT BLATANT ELIMINATION.....First come the animals.....then, come humans.....</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Robert Hoekstra	Robert	Hoekstra	rlhoekstra@yahoo.com	965 Vassar Ave.	Holland	MI	49423	3/5/2016	<p>The delisting and proposal to remove the Yellowstone grizzly bear population from the endangered species list will reverse the progress made toward their recovery. It's while grizzlies have made a comeback that it appears the growth of the population has stalled since the early 2000s.</p> <p>Occupying less than 2% of their historic range in the lower 48, and reproducing at a rate of only 1-3 cubs every few years, the current delisting proposal would apparently allow states to exceed that rate for years before there's any review to assess the damage. Those who cannot tell the difference between a male and female bear, will reduce the rate to 0 if there's nothing to stop them.</p> <p>As one of the most iconic species in America, the majestic grizzly has become a treasured symbol of a wild heritage that is all our own. It's what visitors the world over will continue to spend millions of dollars every year to see. It's for no other reason that the grizzly needs to be protected.</p>

The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth began in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, leaving them hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. People and bears should coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. In fact, we should stop acting as if all other species are living in opposition to us. If we humans are living so as to effect the extinction of many if not most species, and this may be our undoing. we don't know whether or which species we cavalierly eliminate are the ones we will desperately need for our own survival. It should be for their intrinsic value that we protect them, not for our own benefit.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery, not endanger them.</p>

Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery. Our hearts have to be large enough to embrace the protection of the Grizzly bear now and forever while we walk upon this planet.</p>
Ronald Maxson	Ronald	Maxson	ronaldoroso@gmail.com	2801 Hauser Blvd	Los Angeles	CA	90016	3/4/2016	<p>I strongly urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>

Rachel Sturke	Rachel	Sturke	rsturke@gmail.com	20 montgomery ave	Takoma park	MD	20912	4/12/2016	<p>Do not delist the grizzly bear. Its range is a fraction of what it once was. Its numbers are a fraction of what they once were. They have had protection and that is what has allowed them to recover some small degree and that recovery will be lost if you fail in your duty and example of the federal government managing a species to the brink of extinction and leaving it always wavering in its future.</p> <p>Please follow the science and not the politics. You don't need another wolverine reversal. You need to have the courage to fulfill the public trust put in you to protect God's great creation rather than cower.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery. Thanks for your consideration.</p>

Thelma Allis	Thelma	Allis	rtallis@frontier.com	909 Shotgun Hollow Rd	Ulster	PA	18850	4/13/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region and have a right to life on this planet. They want to raise their families, creating bonds with one another, and go about their bear business. Just because we can doesn't mean we should take their lives away from them. They have their place on this earth just as humans do. It would be inhumane to do otherwise.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Sabrina Hardenbergh	Sabrina	Hardenbergh	sabrina@midwest.net	1 Hardenbergh Road	Carbondale	IL	62902	4/10/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them. In fact, my brothers and I camp and hike at Yellowstone National Park in June to see its wildlife and geysers, as well as camp in nearby mountains.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth has slowed since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region. We have camped and hiked out West each summer, bears are just a feature of the terrain here and there. One uses bear boxes to secure food, and tries not to do anything to provoke them, but just let them be. I've even had a small brown bear within several feet of me once, when we both manhandled a large rock at the edge of a campground at the same time...I just let him turn around and go on. While I wouldn't intentionally try to get this close to a bear, I'm also not radically afraid of their presence to want to eliminate them (although one should have a healthy respect to get and secure your food).</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery. Put more bear boxes in the campgrounds, and encourage the bears' prime food habitat to grow a little away from the more high density people areas. Please protect them to these other areas more.</p>

Shelley Sechrist	Shelley	Sechrist	sacredcowmt@gmail.com	3729 Hamilton Rd	Belgrade	MT	59714	4/12/2016	<p>Please do not delist grizzlies. The blood thirsty Anti predator folks will devimate them. And just like wolves, they have a right to exist in peace in their natural environment. Iam writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>People need to be educated about bear behavior and how to behave when in the bears' province. While hiking in BC, there was evidence of bears everywhere, fresh scat et al. I had my bear bells on and emerged unscathed.</p>
Sandra Pottinger	Sandra	Pottinger	sandrapottinger@gmail.com				21153	3/17/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the reg local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Joan Saunders	Joan	Saunders	scojo4957@gmail.com	708 Camberley Circle	Towson	MD	21204	4/16/2016	<p>I Have Written Before an I Have One Thing to Say! Please Leave Them Alone to Live in Peace. Can't you see there are so many Families of these Beautiful Bears. If You Don't Bother Them, They Won't Bother You...!!!! Simple as That! They were put on this earth just like me and you, to live and thrive everyday and enjoy life. Not to be caged or shot at. You Have No Right to Make their Lives Miserable by chasing them and scaring them. They have feelings and they want to protect their young. Just like you and me...!!!! Please Leave Them be, there are Seven animals including a young bear that are caged and starving to death. Do you know why, because A Billionaire Bought them to Show Off to his Guests. But he moved leaving them behind with No one to care for them. That SOB Had enough Money to set them up somewhere they could be taken care of. No that Selfish BASTARD just Left them to die. Two old people in the area Scrape up Food for them when they can.</p>
Joan Saunders	Joan M	Saunders	scojo4957@gmail.com				21204	4/2/2016	<p>That is so Inhumane and now you want to I agree with everything I just read here. Take the time to make changes before deliberately distinguishing these iconic creatures. They are a vital part of our American History and should remain as such. I am writing to Urge you to Postpone the Distinction of the Yellowstone Grizzly Bear Population. The proposal to remove Yellowstone grizzly bears from the endangered species list FAILS to PRESERVE the Progress made toward bear recovery. Ocean Borden	Ocean	Borden	scotchibear999@gmail.com	2802 south 41 street Apt. #217	Abilene	TX	79605	3/7/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend billions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the grizzly population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the cross hairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery. The grizzly does NOT deserve this. This is MURDER</p>

Scott Slocum	Scott	Slocum	scotts002@gmail.com				55110	3/22/2016	<p>Greater Yellowstone Grizzlies need continued protection under the Endangered Species Act. Without this protection, they would again be endangered by those who fear them and haven't learned yet how to let them live. They are essential. Our younger generations will learn to be needed; but until then, please keep them safe.</p>

Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure</p>
Susan Goodwin	Susan	Goodwin	sgwolfe66@gmail.com	66 Point O Pines Rd	Wolfeboro	NH	3894	3/4/2016	<p>In my opinion, your plan to remove protections from Yellowstone's grizzlies is premature and may in fact totally reverse all the progress that has been made in recent decades.</p> <p>We came close to driving this species to extinction in the lower 48 and now that it is finally making a comeback, why do we want to pull the rug out from under it? With the threat of climate change and loss of habitat that is occurring everywhere, it seems unwise to remove t protections now.</p> <p>Please reconsider your proposal to de-list the Yellowstone grizzlies. We need to be doing everything we can to preserve these amazing animals not allowing them to shot by trophy hunters.</p>

Sharon Bourke	Sharon	Bourke	shabou@optonline.net	32 E Elm St	Central Islip	NY	11722	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the r local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Shelagh Mayhew	Shelagh	Mayhew	shelagh_mayhew@yahoo.com	779 Horn St.	Washington	MO	63090	4/10/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunters (who can't tell the difference between a male and female bear) could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>By the way, whoever chose these positions to kill these animals, we have been protecting for a long time now through the Protected Species Act, should be fired and the person that gave them this job should be fired too !!!</p>

The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep and rapid decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back toward extinction because of misplaced political hostility towards these bears. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Rachael Kennedy	Ra	Kennedy	sigre2000@yahoo.com				24060	4/5/2016	<p>I had the priviledge of working in Montana and seeing these majestic beings. I also saw thousands of nature lovers and regular tourists come, hoping to get a glimpse. My time there forever changed my outlook on life. Today, I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the re, local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies</p> <p>People and bears can coexist. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Susanne DeWitt	Susanne	DeWitt	skdewitt@comcast.net	144 Fairlawn Dr	Berkeley	CA	94708	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Susanne DeWitt</p>

We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>Part of making our park system and country great is the respect of wildlife. Bears should have a large place to live. If you take away that, then the species will die out. There needs to be enough variety of bears to have a viable genetic pool for the species to survive. This is why we need to protect the grizzly bear.</p> <p>Why our "government" chooses to listen to corporations instead of the people who love our parks, I do not know. Nevertheless, I do not want to be a part of the generation that "killed" off the bears at Yellowstone or any animals at any of the parks. Bears deserve a place to live.</p>

Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p>

Sally Magaziner	Sally	Magaziner	smagaz@verizon.net	2160 Swedesford Rd	Malvern	PA	19355	4/14/2016	<p>They're supposed to be protected in a National Park. Please stand by what a park should do for Nature's creatures. I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endang progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. The loss of the grizzly would be a loss for the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The loss of female grizzlies to trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population's range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Sean Mooney	Sean	Mooney	sqmooney@gmail.com	140 Chestnut Cir	West Suffield	CT	6093	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. This decision is just another example of the federal government's failure to protect the Yellowstone grizzly bear.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunters who can't tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>
Nancy Hubbs-Chang	Nancy	Hubbs-Chang	squirebran@earthlink.net	77 Patrician Way Apt 3C	Pasadena	CA	91105	3/9/2016	<p>I am writing to urge you to postpone de-listing of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. As a native-born resident of California, even once endemic grizzly there, I weep for its extinction. Visitors spend millions of dollars in the Yellowstone region every year, a vital part of many local economies, to visit the National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts, which benefit no one but the local politicians whose personal coffers are being filled by corporate interests. Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunters who can't tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population's range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery. That may take quite a bit of time, but the Federal government is nothing if not patient. Help the bears stand strong and last for future generations! :)</p>

In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure</p> <p>Thank you.</p>
Sherri Morningstar	sherri	morningstar	starindy317@gmail.com	26836 oso	mission viejo	CA	92693	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Why don't you people just get a life and stop killing everything that friggin' moves in OUR parks!!</p>

The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. We saw what ha wolves. Are you going to do the same thing so we can all go out and hunt bears from helicopters in the name of protecting cattle or lambs or . . .? Please don't. It will be a waste of all the money and efforts made to help bring these bears back.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Stephen Makovec	Stephen	Makovec	stevemakovec@hotmail.com	6533 Pond Ridge Dr	Dayton	OH	45459	4/12/2016	<p>I am urging you NOT to de-list the Yellowstone grizzly bear population. Removing Yellowstone grizzly bears from the endangered species list will not preserve the progress made toward bear recovery.</p> <p>-- In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage.</p> <p>Visitors spend millions of dollars in the region every year, a vital part of many local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationis fought to save them.</p> <p>Grizzlies have made a comeback, but their recovery is still uncertain. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years.</p> <p>-- In the Yellowstone region, the population has not increased since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies VERY vulnerable. States have made their plans clear -- to reduce the population, including through trophy hunts.</p> <p>Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores.</p> <p>-- The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunters who will not be male and female bear could cause a steep, quick decline before emergency action can be taken.</p> <p>In addition, the Yellowstone grizzly population remains isolated. If we further limit their range and numbers, they may not be able to connect to other grizzly populations.</p>

Kat Brekken	Kat	Brekken	sunnyelk@yahoo.com	312 S. 3rd St.	Kat	MT	59030	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the population in the early 2000s, and there was a 6% decline last year.</p> <p>Park Directors for Yellowstone and Grand Teton, have stated that they do not support the proposal to delist the Grizzly Bear. They based their statements on information they obtained from those who are the real experts on Grizzlies, the Park's Biologists. Science, not politics, is how the various states Game and Fish coffers, is how the ESA is supposed to be followed. There are protocols for delisting a species. And like the Gray Wolf, a circumventing of the Endangered Species Act, in a manner inconsistent with protocols, only points to politics being served. It belongs to all Americans and in the case of Yellowstone, a World Heritage Site, the whole world. It is unfair, for the Bears and the majority of people, to lose the great rewards of being able to view a Grizzly Bear, all because a few trophy hunters could put a few dollars in their pockets. Parks are not Game Farms for Trophy Hunters. They are Parks, for the Benefit and Enjoyment of the People.... doesn't say trophy hunters anywhere.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. I know, because I live in Yellowstone and have the bears out my door. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Or because the States need to protect their Game Departments. Please protect Yellowstone grizzlies until there are adequate plans in place at the Federal and State level to and ensure, not endanger, their true recovery.</p>

Malcolm McGregor	Patricia	Mcgregor	sunrisemt@sti.net	P. o, box 2124	Mariposa	CA	95338	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. These bears wen historical heritage Please do not send them into obligation,</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Keith Collins	Keith	Collins	sunsetrim@hotmail.com	90 Sunset Rim	Cody	WY	82414	4/23/2016	<p>Grizzlies have now traveled on their own to the east side of Cody, Wyoming. That's the prairie side, away from Yellowstone and away from the mountains. The Endangered listing of 1975 worked very well. The Yellowstone area grizzly population has fully recovered, and government agencies they should never be threatened again. Now, it's time to delist them. Please proceed.</p>
Sue D'Onofrio	Sue	D'Onofrio	susabella@wildblue.net	805 Watson Dr	Keysville	VA	23947	3/4/2016	<p>PLEASE postpone the delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list does NOT preserve the progress made toward bear recovery. Instead it will reverse that progress!</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. I know this is true because I have been o grizzlies! It is a well known fact that visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. THIS EARTH DOES NOT BELONG TO JUST US, IT ALSO BELONGS TO THE ANIMALS OF THIS EARTH, GOD GAVE THEM LIFE, A PLACE TO LIVE, WHO DOES MAN THINK HE IS TO GO AROUND DESTROYING THE LIFE OF ANIMALS WHO WERE GIVEN LIFE, AND THEIR OWN NATURAL HABITAT TO LIVE IN, MAN DOES NOT NEED TO DESTROY THIS! IS THIS WHAT WE TEACH OUR CHILDREN ABOUT OUR HISTORY OF OUR WILDLIFE, ENVIRONMENT, CULTURE MATTER, BECAUSE MAN GOES AROUND DESTROYING THEM! WE NEED TO TEACH CHILDREN THAT OUR HERITAGE IS PRECIOUS, AND THAT WE NEED TO DO EVERYTHING IN OUR POWER TO PRESERVE THIS FOR OUR FUTURE GENERATIONS. PLEASE DON'T DESTROY!!!! I BELIEVE BOTH MAN AND ANIMALS CAN CO-EXIST. THAT MAN JUST NEEDS TO MAKE A GREATER EFFORT TO ACHIEVE THIS. AND NOT BE SO GREEDY, SELFISH OVER THE LAND. US HUMANS NEED TO LEARN TO SHARE THE LAND WITH THE ANIMALS.</p>

Jeffrey Swett	Jeffrey	Swett	swettjc@gmail.com	48 Tyler Dr	Goffstown	NH	3045	3/3/2016	<p>I am writing to urge you to delist of the Yellowstone grizzly bear population. Those that knee jerk oppose this will never support delisting since it dampens their fund raising appeals.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. It should be managed for the protection of the bears and people. Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone Nat magnificent grizzly. The loss of the grizzly would be a loss for the entire region, by failing to delist you allow a narrow interest group that will never support delisting, since many of them don't live in bear country and have little interaction with these majestic, but often threa management tools. Caving into to the no change crowd is an insult to the professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>Management of grizzly bears outside of the national parks should be left up to the states but iaw Federal law, both to protect bears and people who live and recreate in bear country. People and bears can coexist however bears need to be managed as much as peoples behavi bad for bears and people and if a short, controlled hunting season is deemed appropriate and doesn't threaten the bear recovery or put them back on the endangered list is should be an option. We should not let bears slide back towards extinction but we should also recogni bear behavior, and that those asking for no delisting won't recognize that biological truth. Please do what right for the Yellowstone grizzlies and the people who live, work and play in these areas to protect the bears as needed but not to the point they become pests</p>

We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and e recovery.</p> <p>I honestly can't believe why the Dept. of US Fish and Forestry is consistently trying to take protections away from wildlife. I would hope the Department would focus more on infrastructure and habitat improvement rather than focus on the killing of wildlife which seems to b hope this is curtailed. Upsetting balance in wildlife happens to be a dangerous endeavor. We see this now with pollinators who are endangered to the point that it is a world-wide situation which may cause huge decline in crops and food production. Please, if you will, allo protected.</p>
Margaret Ellsworth	Margaret	Ellsworth	swimm289now@yahoo.com	17010 NE 100th St	Redmond	WA	98052	3/6/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>You know what this message usually says, but I want to tell you what has happened to Bengal tigers. Scary animals? Absolutely! Gorgeous and necessary? Absolutely! There are now about 1,000 Bengal tigers left in the wild in their native habitats. There are about 10,000 returned to the wild.</p> <p>Is this what we want for Grizzly Bears?</p> <p>Yellowstone is just one Grizzly Bear habitat. But this bear is a vital part of that ecosystem. Early delisting will jeopardize the existence of the bear here and what a sad culmination to the years of effort to restore it. Yes, it's hanging on, but it's not yet thriving. And it remain low numbers in many, if not most of its historic habitats.</p> <p>Give us all a break and don't delist the Grizzly bear in the Greater Yellowstone area yet. It's too soon.</p> <p>Thank you for reconsidering this issue. Margaret Ellsworth</p>

The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Susan Elliott	Susan	Elliott	taitai@astound.net	4485 Deerberry Court	Concord	CA	94521	5/3/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows the people you are supposed to serve. The U.S. Fish and Wildlife Service is NOT a oligarchy.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Andrea Lister	Andrea	Lister	todaysgirlfriday@gmail.com	1221 Harbor Avenue SW #104	Seattle	WA	98116	4/23/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows So just leave them alone.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Todd Crawford	Todd	Crawford	toddataloggerhead@gmail.com	918 N New River Dr # 735	Surf City	NC	28445	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Delisting these bears is a very bad idea. States cannot be trusted to responsibly maintain grizzly populations, as is evident from the ramp-ups to reduce the populations. I can only imagine the destruction of these populations by trophy hunters and others.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Todd Blevins	Todd	Blevins	toddblevins7@gmail.com	421 S Talley Ave Apt #C	Muncie	IN	47303	4/18/2016	<p>Dear USFWS and Director Daniel Ashe,</p> <p>My name is Todd Blevins. I am deeply saddened as I write this message today, for I recently discovered that while the Yellowstone wolf population is perilously close to extinction due to the hunting policies of Idaho, Montana and Wyoming, the USFWS is now considering This would be a deeply tragic policy, one that could endanger the Yellowstone biological system and cause America to lose one of its most cherished species.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery. PLEASE KEEP THEM PROTECTED!!!</p>
Ralph Hagewood	Ralph	Hagewood	trakai@att.net	232 Richmond Hill Dr	Asheville	NC	28806	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the species.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery. I visited Yellowstone with my wife in 2013 and we did see the park overrun with grizzly bears.</p>

Martha Sellers	Martha	Sellers	traveltheworld@inbox.com	213 Flamingo Dr	Austin	TX	78734	4/13/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Paul Cooke	Paul	Cooke	uglyrascal@live.com	PO Box 83	Bryant	AR	72089	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. The Grizzly Bear belongs in the Yellowstone National Park. IT IS NOT A JOGGING TRAIL FOR THE PUBLIC. IT IS NOT INTENDED FOR SAFE PEDESTRIAN TRAFFICK. It is preserved as a wildlife park. Please, keep your hands off the wildlife of the Yellowstone bears. The bear has always been my favorite aggressive animal of the wild. I do not want to see them harmed. Though they are my favorite wild animal doesn't mean that I want to go for a walk in their habitat nor want to pet one of them. I am content on watching them fro Please, protect them. Thank You. P. Cooke</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery. The evidence supports this.</p>
Vivianne Mosca-Clark	Vivianne	Mosca-Clark	vivianneclark@yahoo.com	3565 E Fork Rd	Williams	OR	97544	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Do not rush things. Allow the bears to stabilize. Life does not move in a straight line.</p>

Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the cross-hairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which is hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p>
William Cuddy	William	Cuddy	whcuddy@att.net	204 Dromara Rd	Guilford	CT	6437	4/12/2016	<p>As a long time visitor, hiker and pack horse traveler in the Greater Yellowstone area, I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. In the Yellowstone region, the growth of the population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Joyce Strombeck	Joyce	Strombeck	windwillowwhisper@gmail.com	2237 Grove Ave	Berwyn	IL	60402	3/6/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. The loss of the grizzly would be a loss for the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which is hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
JoAnn Oeser	JoAnn	Oeser	wolves9446@gmail.com	211 Donald	Whitehouse	TN	37188	3/6/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Wanda Fennell	Wanda	Fennell	wsfennell@verizon.net	4513 Club Cart Circle	Fredericksburg	VA	22408	4/12/2016	<p>I oppose the delisting of the Yellowstone grizzly bear population from endangered species status. Delisting will have the effect of putting the bears right back into jeopardy. You surely know the information detailed below. Please do not take this step backward.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>
Yvonne Pawtowski	Yvonne	Pawtowski	ypawtows@gmail.com	7100 187th Pl SW	Lynnwood	WA	98037	3/4/2016	<p>Please,</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>
Christopher Rathbun	Christopher	Rathbun	ypochris@yahoo.com	715 S Peninsula Dr	Daytona Beach	FL	32118	4/10/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>When you remove top predators from an ecosystem, that ecosystem collapses. The states surrounding Yellowstone may not want bears, but they need them. Wiping out American bears is no different than people wiping out lions and cheetahs in Africa. Is this the example we want to set? If we have a good conscience, ask the rest of the world to conserve their charismatic wildlife as we wipe out our own?</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire world, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of the population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Randall Fletcher	Randall	Fletcher	zippy203t@hotmail.com	115 1st St	Sumas	WA	98295	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Don't allow this to happen, the states do NOT have the sense to protect their wildlife, they are only interested in the money that can be made from trophy hunting and ranching! The federal protection of the ESA must remain in place for all our wildlife, the people are watching.</p> <p>Do not listen to the corporate interests and their media stooges, you can do better than that, Mr. Ashe.</p>

Brian Hoover	Brian	Hoover	zwnetwork@gmail.com	43 Campo Rd	Tijeras	NM	87059	4/12/2016	Do not leave our cultural icon the grizzly bear to the mercy of violent minorities that consider eradication of every non-human carnivore a sport. The killing contests are gearing up. Do not abet the cultural vandalism sure to follow delisting.

Suzann Withers	Suzann	Withers	zydecoqt@live.com				84119	3/14/2016	<p>Why must we endure the insanity of listing, de-listing, listing, de-listing? But then, we aren't (yet) the ones who are suffering because of human stupidity. I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population.
