James & Sharon Porter	James & Sharon	Porter	124pl@earthlink.net	2300 Calle Corta	Santa Fe	NM	87507	4/12/2016	<p>Please postpone the delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort, especially with the climate changing as quickly as it is. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of the population has stalled since the early 2000s, there was a 6% decline last year, and a great uncertainty as the region will warm up over the next several years and their natural habitat will shrink.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Laura Horowitz	Laura	Horowitz	12newmoons@gmail.com	6544 Darlington Rd	Pittsburgh	PA	15217	3/3/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. Surely that cannot be the intent.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p>
Andy Gelston	Andy	Gelston	a.gelston@juno.com	PO Box 421	Grantham	NH	3753	3/4/2016	<p>I understand you've recently released a proposal to remove Endangered Species protections from grizzly bears in the Greater Yellowstone region. These bears are an essential piece of the American West, a wildlife icon that has been integral to the Yellowstone region for centuries. Millions of people visit the region each year, millions in the region, hoping to catch a glimpse of a grizzly, this beautiful and powerful symbol of our wild heritage. And as an apex predator, their presence is crucial to the health of wildlife in the Greater Yellowstone region.</p> <p>Thanks to Endangered Species protections, grizzly bears are making a remarkable recovery after being hunted to the brink of extinction, but they're still vulnerable. Your proposal to delist the grizzly fails to preserve this progress and will reverse it. The bears' naturally slow recovery is threatened by many sources to climate change, and state plans to reduce numbers through methods like trophy hunts, all spell disaster. It's too soon to remove ESA protections for Greater Yellowstone grizzlies!</p> <p>Despite making a comeback, the Greater Yellowstone grizzly population still faces significant challenges for true recovery. The population has barely grown since the early 2000s, and fewer cubs are living to adulthood. Grizzlies also naturally reproduce very slowly; a female bear typically has only 1-3 cubs every few years, so the hunting death of even one female is a significant loss.</p> <p>They are also geographically isolated, a serious threat to the long-term health of the population. Although bears will have some measure of protection within Yellowstone and Grand Teton national parks, once they range outside the park boundaries, they will be at the mercy of state and local policies. This could effectively prevent bears from connecting with other grizzly populations, further limiting the bears' potential for true recovery. It's critical that you get this right, and this plan isn't right.</p> <p>Changes in the bears' feeding and foraging habits have increased the incidences of bears dying as a result of conflicts with hunters and ranchers. But bears and people can and have peacefully co-existed for centuries. Education and better management are both more effective ways to protect bears than blanket removal of protections, or a trophy hunt. Please retain ESA protections until grizzly bears are truly recovered, take action to protect our iconic wildlife today!</p> <p>Thanks for all you do for western wildlife,</p>
Marilyn Miller	Marilyn	Miller	a1932mom@aol.com	2820 W Lawrence Ave	Springfield	IL	62704	4/13/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. Bears are an integral part of the Yellowstone ecosystem.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Kegan Palozola	Kegan	Palozola	abyssbass1989@yahoo.com	5201 Lakewood Terrace. Apt. 110	Imperial	MO	63052	3/8/2016	<p>I believe with conservation that humans can only play a basic part with controlling wildlife, predators as my main point. Predators need to thrive just as much any other creature. The impact we play is taking a bigger chunk than we think. I, myself am a hunter and even in Michigan I hunt Whitetail deer, Turkey, Squirrel, Rabbits, etc (game animals). When I was younger, which I'm 26 now. When I would go into the woods, the amount of animals I would see was very drastic in numbers compared to today. Animals as I know you know, live in a survival instinct that to kick in. Why do we feel the need to keep such strict numbers when we clearly cannot keep non-predators in a good balance. Bears, wolves, cougars, coyotes, bobcats, etc all deserve a equal chance. Being shot from a helicopter is not proper conservation. I don't think trophy hunting plays a big role in this, knows really an equal balance. I'm not saying I have the key but turning nature into circus/zoo is not our role to play. I understand conservation but not when it's taking out of the balance made by life. I know, plenty of people want the best for nature. I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>I part of. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Anna Drechsler	Anna	Drechsler	adrechsler2003@yahoo.com				60016	3/13/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. Grizzlies are important to the national parks. They are iconic species, a pride of every American who cares about the great legacy of Theodore Roosevelt. Their fate can not be decided by random shooting or so called "trophy hunters" That's what will happen if the protection of ESA is removed ! Please do the right thing and protect them.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region every year - a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the grizzly population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave grizzlies vulnerable to trophy hunters who can't tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Erin Hauge	Erin	Hauge	advocate4wildlife@gmail.com				95814	3/22/2016	<p>Please postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list is premature and does not preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>While grizzlies have made a comeback, their recovery is still delicate and uncertain. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the grizzly population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave grizzlies vulnerable to trophy hunters who can't tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>Visitors spend millions of dollars in the region every year - a vital part of many local economies - to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a huge loss for the entire region, including the ancient Yellowstone region and its large carnivores.</p> <p>The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunters who can't tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>It is too soon to remove ESA protections for Greater Yellowstone grizzly bears. Please do not cave in to special interests and do not give grizzly bear management back to the states at this time. It will not end well for grizzly bears and, ultimately, the loss of grizzly bears will be a loss for the entire region.</p> <p>Thank you for your consideration.</p>

Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Dawn White	Dawn	White	aislinn111@aol.com	3422 Green Hill Dr	Arlington	TX	76014	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it!</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to cubs.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. Visitors spend millions of dollars in the region's many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to preserve the progress made toward bear recovery. In fact, it will reverse it. The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas.</p> <p>The loss of female grizzlies to trophy hunters who can't tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Alex Varner	Alex	Varner	alexvarner@yahoo.com				35206	3/27/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would be hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting, the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p> <p>I lived in the greater Yellowstone ecosystem for years and realize how perilous the situation is for bears there. Please don't take these bears back to the brink of extinction once again.</p>
Adrienne Waterston	Adrienne	Waterston	aliceiw@comcast.net	151 W Mitchell Ave	State College	PA	16803	4/23/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Mary Ames	Mary	Ames	amesink@earthlink.net	30657 Sky Terrace Dr	Temecula	CA	92592	3/4/2016	<p>I am writing to urge you to postpone removal of the Yellowstone grizzly bear population from the endangered species list. The delisting proposal fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of grizzly bears would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Joe Marchelites	Joe	Marchelites	angelharpny@yahoo.com	131 Gilley Dr	Harvest	AL	35749	3/7/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth began in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>
Angelica Dewey	Angelica	Dewey	angelicadewey@verizon.net	89 Elm St	Hatfield	MA	1038	3/4/2016	<p>The Yellowstone grizzly bear population has grown ever so slowly since recognized as an endangered species, and now there are a mere 700 or so, as of a recent newscast. The proposal to remove Yellowstone grizzly bears from the endangered species list is far too premature toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>The slow increase in grizzly population does not guarantee more increase at all ! Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, Population growth began in the 2000s; and there was a 6% decline last year !</p> <p>Without doubt, this species still requires human beings to step away from the meagre range we allow them, and also make special protective regions beyond the Parks' borders. All the protections should be kept in place that being on the Endangered Species List provides !</p> <p>The proposed rule leaves Greater Yellowstone grizzlies altogether vulnerable once again -- as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We must not let bears be killed and again approach even closer to extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>

Angela Murgel	Angela	Murgel	angjm99@yahoo.com	1140 S Harrison St	Denver	CO	80210	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. Anne Terry	Anne	Terry	anneterry513@aol.com	602 Craycombe Ave	Baltimore	MD	21211	3/9/2016	<p>The Department of the Interior (DOI), Secretary Sally Jewell, and the associated agency, the United States Fish and Wildlife Service need to revise their policies, strategies, and management of our the lands that belong to the people of the United States of America. I have written to you on the antiquated policies favoring special interests and private entities that seek access to wild animal slaughter (it is not hunting until these creatures can shoot back), to ranchers and farmers whom are receiving tax subsidies, tax allowances, federal loans, and access to public lands. Wild life, including wolves, have a negligible effect on live stock. If ranchers choose to place their stock on public lands they must accept a very small risk. With accelerating climate change, depletion of our aquifers, industrial farming serving the interests of China, we must keep our wild lands, our parks, our forests, protected, intact, and conserve the ecological systems that are the lungs and the filters of our earth.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth began in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>We cannot continue to allow our natural world to shrink. Please protect them.</p>

Amy Fass	Amy	Fass	anom@nyct.net	330 Haven Av.	New York	NY	10033	3/6/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list would fail to preserve the progress made toward bear recovery. In fact, it would reverse it.</p> <p>The Greater Yellowstone grizzly bear must be protected, but not because it's one of the United States' most iconic species, not because it's been held sacred by native communities for thousands of years in the west, not because it's "majestic" and has become "a treasured symbol" because visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a grizzly. The grizzly bear is an essential member of the West's ecosystem, and it has a value in itself. Its extinction would be a loss for the entire region, and that's much more important than any disservice it would be to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made something of a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 states and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has stalled since the early 2000s, and there was even a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. A particularly alarming provision is that the current proposal would allow states to exceed maximum bear deaths for years before any review had to take place, which could potentially lead to irreversible damage and allow eradication of female grizzlies to trophy hunters who can't tell the difference between a male and female bear could cause a steep, quick decline before emergency action could be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting the bears' range and numbers connecting to other grizzly populations and restoring their numbers.</p> <p>People and bears can coexist. We should not let bears slide back toward extinction because of misplaced political hostility toward them. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Lydia Spitzer	Lydia	Spitzer	antaeus659@gmail.com	734 Galaxy Hill Rd	North Pomfret	VT	5053	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list will not only reverse the progress made toward bear recovery, it sets a horrible example of poor will.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region, local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts, which have unfortunately become increasingly popular among the ignorant wealthy. Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores.</p> <p>The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. It is a moral crime to push bears slide back towards extinction just because of misplaced and ill-informed political hostility towards these magnificent and beloved creatures. Please don't deliver bears to people who will not take science into account. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Tony Vincenti	Anthony	Vincenti	apvince@cox.net				93101	4/8/2016	<p>Dudes , please postpone delisting of the Yellowstone grizzly bear population. The proposal to fully remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will absolutely reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Ara Marderosian	Ara	Marderosian	ara@sequoiaforestkeeper.org	PO Box 2134	Kernville	CA	93238	4/12/2016	<p>REMEMBER the Federal District Court issued a stinging ruling that reverses the politically motivated decision by the U.S. Fish and Wildlife Service to keep wolverines off the Endangered Species List AND STOP delisting of the Yellowstone grizzly bear population. The proposal to remove bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p> <p>There are many wild places for the bears to move into, in order to expand their range, and improve their chances of survival, but the bears will never reach those available spaces if we hunt them the minute they step out of a national park.</p> <p>The proposed delisting is extremely irresponsible, and completely contrary to the scientific evidence available to us. I am counting on the US Fish and Wildlife service to do the right thing, and stop the proposed delisting before this disastrous proposal goes any farther. You are supposed to be protecting our wild creatures, not opening them up to extinction so that a few hunters can kill 399, 610, and the other bears that Wyoming counts on to draw hundreds of thousands of tourists to our state every year. These bears are worth more to the people of the surrounding western states, protected and alive, and are worth nothing to us as trophies hanging on some rich hunter's wall. Stop this scientifically unsupported and economically damaging delisting proposal in its tracks, for the sake of the continued survival of the grizzly bear and many of whom count on tourism to make their living. Please do the right thing, and leave the grizzly bear on the endangered species list.</p>
Arnold Martelli	Arnold	Martelli	arnold_martelli@yahoo.com	2813 Windsor Ln	Modesto	CA	95350	3/3/2016	<p>I urge you to postpone delisting of the Yellowstone grizzly bear population. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Gary Sjogren	Gary	Sjogren	ashogun@verizon.net	14820 Tacuba Dr	La Mirada	CA	90638	4/11/2016	<p>I urge you to postpone delisting the Yellowstone grizzly bears. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. auggie graham	auggie	graham	auggie.canuck@gmail.com	864 grand	san diego	-	92109	3/3/2016	I'm almost 100% certain that those hired to oversee environmental issues learned about "carrying capacity of the land" in freshman enviro. class. Allow nature to take it's course when it comes to the grizzly population. We are interfering way too much & potentially opening trophy, not the humaneness that this area is that animals' home. If a bear or any creature comes into our personal space, we defend it. Yet when we invade their territory & the animal defends its home, they are killed. It makes no sense. Please set an example to teach & respect entering our protected lands. I am an outdoor lover in every way, shape & form & urge the U.S. Fish & Wildlife to take advantage of educational opportunities & teach the less knowledgeable about the grizzly species, rules for a safe & healthy experience while in our beautiful convenience isn't the answer. Please re-evaluate your stance on lifting the endangered protection. Let's not take our natural beauty in ALL its forms for granted. This is more important than money.

The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Philip Levy	Philip	Levy	awfultruth@pacbell.net	649 Deodara Dr	Altadena	CA	91001	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>Please - Please - Please Do not delist the Yellowstone Grizzly.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Alvin Johnson	Alvin	Johnson	awj53@hotmail.com	511 C St	Broderick	CA	95605	3/4/2016	<p>Enough already! Do not delist these bears, maintain the listing to ensure their continued growth. Once they are gone, they are lost forever.</p> <p>Think saving species, not allowing elimination by delisting.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Martha Bannister	Martha	Bannister	bann@sonic.net	1139 Sunnyside Dr	Healdsburg	CA	95448	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. My greatest thrill of visiting Yellowstone for a week was seeing one Grizzly Bear from a distance, far across a river. We were out early each morning to see what we could see - we saw lots of wildlife, but only one Grizzly. Is this "over" population? When one considers how far and wide the Grizzly habitat spread in their natural habitat (including California) restricting their habitat to Yellowstone seems miserly. Yellowstone is an ideal habitat for them, with little opportunity to threaten humans. A park designed to be so opportunities for hiking or cross-country interactions with humans, what could be more ideal for a Grizzly habitat?</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Barbara Smitherman	Barbara	Smitherman	barb.smitherman@comcast.net	9052 W Tulip Dr	Columbus	IN	47201	4/13/2016	<p>My family visited Yellowstone last summer and were so excited at seeing a wild Grizzly Bear. It's a once in a lifetime experience. It's our understanding the bears go out of the park sometimes and mate with other bears which helps with the gene pool. They cannot be subject practice). Removal from protection would be a mistake. I learned more about the bears while on the park. It did not sound like they have fully recovered, cubs often don't survive, it takes longer for them to become established and their numbers are nowhere near what they strength their existence is still fragile. Please continue the right and humane service to protect these magnificent animals. I want my grandchildren to experience the same thrill I had in glorious Yellowstone.</p> <p>Thank you, Barbara Smitherman</p>

The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which is hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their true recovery.</p>
Barbara Krueger-Jennings	Barbara	Krueger-Jennings	barbarakruegerjennings@yahoo.com	200 Hina Ave, #Y3	Kahului	HI	96732	4/10/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. Management of grizzly bears outside of the national parks would be left completely up to the states, which is hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Rudy And Barbara Stippec	Rudy And Barbara	Stippec	barbie.stippec@verizon.net				76209	3/23/2016	<p>Why do we citizens have to ask, request, beg and plead with you to do the right thing on any number of environmental issues. The current one being your wanting to delist our iconic Yellowstone grizzly bear from the Endangered Species protections list. In reading the following, you now see why it would be unconscionable to execute the delisting of the Yellowstone grizzly bear. Allowing hunters to feel the thrill of executing these bears must be replaced with the thrill of actually seeing and hopefully observing them. These bears must be allowed to roam their natural habitats under the protection of being on the Endangered Species List.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Aloha ?Aina!</p>

B Manderscheid	B	Manderscheid	beaone@gmail.com	6102 E Miramar Dr	Tucson	AZ	85715	3/4/2016	<p>I am exhausted with begging U. S. Fish and Wildlife to stop the continued tipping of ecology -- it never turns out well for man or beast. Let other species manage their own lives and they will do it the natural way -- or is there another oil well or gas well that needs to be drill kind of thing.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Bert & Vivian Goff	Bert & Ms. Vivian	Goff	bert@tristoe.net	65 Legion Rd	New Milford	CT	6776	3/9/2016	<p>We are writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the reg local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Gail Seabury	Gail	Seabury	bflogal@hotmail.com	362 East Main St	Yarmouth	ME	4096	4/26/2016	Please don't delist the grizzlies. There are so few places left like the Greater Yellowstone area that are large and wild enough to offer grizzlies a suitable habitat, and their existence there is a big part of what makes Yellowstone so unique. There is no animal like them, and t American people to become hunting trophies for a few. The power to protect them is yours. Thank you.
Barbara Francisco	Barbara	Francisco	bfrancisco81@yahoo.com	8904 Glenville Rd	Silver Spring	MD	20901	3/4/2016	Please protect this species - so important for the health of the whole ecosystem. My visit to Yellowstone was fabulous! I want the park to stay as healthy as it can for as long as possible. Thank you.
Bonnie Gahris	Bonnie	Gahris	bgahris@gmail.com	520 Longfellow Ave	Glen Ellyn	IL	60137	3/9/2016	We often don't realize how valuable wild animals are to the health of an ecosystem ... until their numbers are reduced or they disappear altogether. So I'm writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Lisanne Freese	Lisanne	Freese	bleufishh@yahoo.com	5508 W Ardmore Ave	Chicago	IL	60646	3/3/2016	<p>Please postpone delisting of the Yellowstone grizzly bear population. Delisting means death for grizzlies. Removing Yellowstone grizzly bears from the endangered species list will reverse any progress the species has made.</p> <p>The Greater Yellowstone grizzly bear is held sacred by native communities and is a treasured symbol of our wild heritage. Visitors, like me and my husband, spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park and see the magnificent grizzly (which we failed to do but hope to see on our next visit). Killing grizzlies means a loss for the entire region and is a disservice to wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, recovery is a delicate and uncertain effort. Grizzlies occupy less than 2% of their historic range in the lower 48 and reproduce very slowly; only 1-3 cubs every few years. In the Yellowstone region, population growth has stalled since the early 2000s, and there was a 6% decline last year! With global warming and changing plant and animal migration, it will be harder to raise cubs in the future, putting the entire grizzly population at risk.</p> <p>The proposed rule means dead Greater Yellowstone grizzlies; states have made clear plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would allow annihilation of bears in some areas. The loss of female grizzlies to trophy hunters who tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let grizzlies be killed because of political hostility. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their true recovery.</p> <p>I care about our planet and the fragile balance between its residents. I do not want grizzlies killed! Please do the right thing and stop the delisting!</p>

Diana Dale-Hargraves	Diana	Dale-Hargraves	blizzard1983@charter.net	1121 Summit Way	Sauk Rapids	MN	56379	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. Grizzly's have just begun the long road back from recovery. Please do not halt their ability to exist, the balance of the eco-system depends on their existence. They have enough obstacles to overcome as the world's climate changes, we must not interfere in their basic right to exist.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations, which is exactly the reason WHY we have been spending so much time and money to preserve & expand their habitat!</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure, not endanger, their true recovery.</p>
Beth Jones	Beth	Jones	blj1@direkt.at	222 Southhaven Drive	Monticello	IA	52310	3/4/2016	<p>I am writing to urge you to cease and desist in implementing the incredibly shortsighted plan to remove the Yellowstone grizzly bear population from the Endangered Species List. The proposal to remove Yellowstone grizzly bears from the list foolishly and willfully fails to protect the species toward bear recovery. In fact, it will reverse it.</p> <p>That is unacceptable on every level and the USFWS should know better than to pretend everything's A-OK.</p> <p>As you well know, the Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Wildlife tourism is a vital part of the region's economy; visitors spend millions of dollars in the region every year, many visiting Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly (again!) would be yet another loss for the entire region's ecosystems, as well as a slap in the face to the conservationists and wildlife advocates who have fought for decades to save them ? and to the taxpayers, who not only fully support environmental and wildlife recovery programs, their TAX DOLLARS FUND THEM.</p> <p>Yes, grizzlies have made a comeback, but as you really should know, their recovery is still a delicate and uncertain situation. Grizzly bears occupy less than 2% (!) of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In fact, the growth of the population has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have revealed their schemes to significantly reduce their bear populations, including through trophy hunts featuring the typically reckless mentality of trigger-happy hunting fans, eager to blow off steam with wanna-be-macho fantasies.</p> <p>The "management" of grizzly bears outside of our national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. (Just look at the stuttering attempts to let wolves recover in their native habitats out west. Same story: popular recovery efforts, until some loud-mouthed Little Red Riding Hoods talk local politicians into signing off on wholesale slaughter.) Unscientific, wasteful idiocy.</p> <p>Unfortunately, the current proposal would allow states to exceed maximum allowable bear death limits for years before any review would take place. This would blithely permit potentially irreversible ecological damage and allow the complete eradication of bears in some regions, v promoting bear recovery on OUR public lands for decades.</p> <p>An additional complication is that the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations, which is exactly the reason WHY we have been spending so much time and money to preserve & expand their habitat!</p> <p>People and bears can coexist wherever the people choose to show more good sense than selfish arrogance. We should not be so stupid as to let bears slide back towards extinction because of ignorant hostility towards these magnificent and ecologically valuable creatures. So, I - citizens call on you to PROTECT Yellowstone grizzlies until there are adequate plans in place at the state level to ENSURE, NOT ENDANGER, their true recovery.</p> <p>Thanks for your time and wise efforts in addressing this urgent matter.</p>
Brett Luce	Brett	Luce	bluce4life@gmail.com	908 Barry Lane	Cleburne	TX	76031	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations, which is exactly the reason WHY we have been spending so much time and money to preserve & expand their habitat!</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Laura Miller	Laura	Miller	bluecowboyoga@gmail.com				1075	3/11/2016	<p>I urge you to postpone delisting the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. It will reverse that progress.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly is a treasured symbol of America's wild heritage, not to mention a living, breathing life form tha with which it has co-evolved. Tourists pour millions of dollars into the region's local economies every year, as they visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2 per cent of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as without federal protection, states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would which, having a more short-sighted view and swayed by their constituencies, have historically been hostile to bears and other large carnivores. An example and precedent should be set and maintained at the federal level. The current proposal would allow states to exceed ma any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunters who can't tell the difference between a male and female bear could cause a steep, quick decline before emergency acti Yellowstone grizzly population is geographically isolated, so further limiting their range and numbers could prevent them from ever connecting to other grizzly populations, and thus threatening their genetic diversity and long-term viability.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensu</p>

We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure, not endanger, their recovery. Lets give the Griz a chance.</p>
Bobbie Flowers	Bobbie	Flowers	bobbie_flowers@hotmail.com	418 West 17th Street, Apt. 22A	New York	NY	10011	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure, not endanger, their recovery.</p>
Robert Cosner	Bob	Cosner	bobbyc18@hotmail.com	24 Jefferson	Monessen	PA	11506	4/27/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them. With all the land we have about conservative measures, it is poor stewardship and greed for not allowing the original plants and animals in North America to be here ... Bob</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to end trophy hunting and bear recovery.</p>
Beth Piburn	Beth	Piburn	bpiburn@verizon.net	12300 Montecito Rd #48	Seal Beach	CA	90740	4/21/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. All it would take for the recovery would be sent backwards. They need protection. PS So do the wolves.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzly bears began in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region, many species of animals because of big businesses or the rich. We must protect the species that we still have left on this planet. Too many have been lost to poachers and now to climate change. WE MUST save what we have left on this planet. Please protect these beautiful creatures.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p> <p>Let's give nature the benefit of the doubt, by providing a real cushion against the potential backsliding of population numbers. Given that climate change is heading into uncharted territory, and the impacts upon wildlife and habitat are putting unforeseen pressures on them; it is important to count on the current numbers to be maintained. We should place the ongoing balance of the natural systems in this area, especially, above political expediency.</p>

The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them. While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth was in the early 2000s, and there was a 6% decline last year. The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would allow the loss of bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations. People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure, not endanger, their true recovery.</p> <p>WHY is this even being considered???? STOP IT IMMEDIATELY so that People can enjoy seeing these wonderful creatures in Yellowstone!</p>

The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Carla Johns	Carla	Johns	c.johns@me.com	500 Walden Way	Fort Collins	CO	80526	3/3/2016	<p>Please DO NOT delist the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. We have decimated the population of grizzlies and we should maintain and grow a healthy population in the lower 48.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. Jessica Mcgeary	Jessica	Mcgeary	camwyn@megaloceros.net	19 Seymour St Fl 3	Winthrop	MA	2152	3/4/2016	<p>While I appreciate the ongoing recovery of the Yellowstone grizzly bear population, I don't believe these animals have sufficiently recovered yet to warrant removing their extra protection afforded by the Endangered Species Act. The economic bonuses resulting from this recovery are short-term compared to the economic losses likely to be suffered from the undoubtedly precipitous drop in these slow-maturing, slow-breeding animals' numbers should they be exposed to trophy hunts and culling once again. People spend a lot of money to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the population has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in an extremely bad situation. We know perfectly well that the state governments of the region are prepared to declare open season on the bears wherever they deem necessary. Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Craig Piernot	Craig & Carol	Piernot	capiernot@hotmail.com	3307 W 113th Ave	Westminster	CO	80031	4/12/2016	<p>Have you every witnessed Grizzly Bears in their natural habitat in Yellowstone National Park? Are you knowledgeable at all about the Grizzlys' species, history of being hunted to near extinction, their slow reproductive rate, loss of natural habitat and key sources of food? Can you comprehend how Yellowstone and millions of American and foreigner them from extinction? And, do you understand why grizzly bears flourish in Yellowstone and struggle to survive elsewhere in the lower 48 states? We strongly urge America's Fish and Wildlife Service honestly and intelligently abide by its mission and postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the p</p> <p>In fact, it will reverse a restorative program based on extensive valid and reliable scientific study that originates from a bi-partisan dedication to natural resource and public service management.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While the grizzly population in the Yellowstone area has advanced from near extinction, their recovery remains a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 states. Their reproduction is very slowly, at a rate of only Yellowstone region, the growth of the population has stalled since the early 2000s, and there was a 6% decline in 2014.</p> <p>The proposed FWS rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, to bears and other large carnivores.</p> <p>The current proposal would allow states to exceed maximum bear deaths for years before any WRS national, comprehensive review. That alone would create potentially irreversible species damage; and, it would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunters--unwilling to tell the difference between a male and female bear, would inevitably result in a steep, quick populatio be taken. Additionally, the Yellowstone grizzly population continues to remains isolated. In itself this limits their natural range and reproductive rates, and prevents them from connecting with other grizzly populations.</p> <p>People and bears do coexist as has been exhibited for years in the Yellowstone area. Politicians, bureaucrats, and agricultural special interests ought not let bears slide back towards extinction because of misplaced and emotional hostility towards them. The direct consequence of this ill-informed and "nit-wit" proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>The FWS needs to prioritize its mission and protect Yellowstone grizzlies until there are adequate valid and reliable data with species-specific plans in place at the state level to ensure, not endanger, their true recovery. In sum, allow the Yellowstone grizzly bear population t treasure they are today!</p>

The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure They die we die</p>
Carolina And Walker Butler	Carolina	Butler	carolina.butler17@gmail.com	11837 N. Paradise Drive	Scottsdale	AZ	85254	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Has the proposal to remove Yellowstone grizzly bears from the endangered species list taken into consideration the current impact of climate change on the grizzly bears in Alaska - on bear supply? Seems to me that U.S. F&W should be all the more cautious about the grizzly bears we have in the Lower 48 because not even the scientists know all the changes happening now, and coming, to our wild animals and plants they feed on. As it's been said, "Our plants, etc) are the best idea America ever had." Don't blow it now. Preserve and protect!</p>

Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure</p> <p>You cannot do what you did to the poor Wolves. Humans haven't cut back our activities that impinge on the space and lives of all these creatures. They must remain protected or we will kill them off as surely as we killed off every Passenger Pigeon.</p>
Cathrine Talarico	Cathrine	Talarico	cathytalarico@gmail.com	2921 49th St	Des Moines Iowa	IA	50310	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>What a loss. Whatever leaves our planet destroys the balance. We will not ultimately survive either.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p> <p>The grizzly bear has more entitlement to the land this magnificent creature calls home than human beings. They were there first! By delisting the beautiful grizzly will be just another failure of the U.S. Fish and Wildlife Service, which I understood was established to protect and conserve the nation's wildlife. I cannot defend themselves. I would like to leave you with something to consider: If human beings weren't so greedy.....for everything...there would be no reason for the Endangered Species Act, and all of these animals could live as they have for more years than humans have existed. There doesn't seem to be much difference between the USFWS, the BLM and the BIA. All of you seem to have a mindset that does not favor what you were established to protect and defend. It's time to do what is right, not what you think is right.</p>
Cynthia Willauer	Cynthia	Willauer	ccwil@conncoll.edu	55-1 Beaver Brook Rd	Lyme	CT	6371	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would be hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>I am aware grizzly bears can pose a danger to campers and possibly hikers, but the challenge for us is to change our human behaviors, not delist grizzlies, exposing them to indiscriminate slaughter outside of the park. My husband and I have hiked in Yellowstone on the outskirts, and we have thrilled to see families of three grizzlies on a hillside above our trail. Others should have access to these experiences of the need to both respect and to thrill to the wildness of nature.</p>
Chris Eaton	Chris	Eaton	ceaton7777@gmail.com	10440 Wilsey Ave	Tujunga	CA	91042	3/5/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Chandira H	Chandira	H	chandirah@gmail.com				98177	3/22/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the r local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to the main population.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Thank You for protecting this great animal.</p> <p>Sincerely, Cheryl</p>

The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth began in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

John Hutchhison	John	Hutchhison	chutchisonmusic@hotmail.com	1760 High St SE	Salem	OR	97302	3/3/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. We need to develop a wildlife corridor from Canada to the Wind River mountain range in Wyoming. Delisting grizzly bears is going backwards. The proposal to remove Yellowstone species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure recovery.</p> <p>It should be noted that top-tier predators contribute to the health of rivers by limiting the time prey animals linger there, thus doing less damage to riverbanks and decreasing erosion. Decreased riverbank erosion leads to more water retained in nearby soils, contributing to the In this time of critical water shortages, grizzlies can help natural ecosystems restore themselves.</p>
Chris Miilu	Chris	Miilu	cmiilu@yahoo.com	2701 Sierra Sunrise Ter	Chico	CA	95928	4/12/2016	<p>Please do not de-list the Yellowstone grizzly bear population. This proposal not only fails to preserve any progress made toward grizzly bear recovery, it reverses it.</p> <p>The Greater Yellowstone grizzly bear is an iconic species in the American West. Native communities have held this wildlife sacred for thousands of years. It is a famous and treasured symbol of our wild heritage.</p> <p>Visitors spend millions of dollars in Yellowstone every year hoping to see a grizzly. Their loss would be a loss for the entire region. Dedicated conservationists and wildlife advocates have fought to save them. The public supports their efforts. The region depends on tourism.</p> <p>Grizzly bears occupy less than 2% of their historic range in the lower 48; they reproduce only 1-2 cubs every few years. The growth of the population In the Yellowstone region has not increased since the early 2000s. There was a 6% decline last year.</p> <p>States have plans to reduce the population; this includes trophy hunts outside the national park boundaries.</p> <p>Western States have been hostile to bears and other large carnivores due to rancher's perceived threats to livestock and grazing land. States are now asking to exceed maximum bear deaths prior to any review. If States are allowed to hunt and kill grizzly bears without review, complete eradication of bears in some areas.</p> <p>Trophy hunters who cannot tell the difference between a male and female bear could cause a steep, quick decline in the population. The Yellowstone grizzly population remains isolated, without the interaction seen in a natural setting.</p> <p>People can coexist with bears. The current hostility is political and misplaced. There will be fewer bears limited to an even smaller portion of the Yellowstone region so that ranchers can graze cattle on public lands.</p> <p>Please protect Yellowstone grizzlies; there must be adequate plans at the state level to ensure, not endanger, the true recovery of this magnificent Species.</p> <p>Thank you for your attention.</p>

The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has slowed since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>ALL ANIMALS HAVE A RIGHT TO LIVE TOO.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their true recovery.</p>
Bill Easley	Bill	Easley	coe.2505@gmail.com	1414 Pontocola Rd	Pontotoc	MS	38863	4/14/2016	<p>I am writing to urge you to please postpone de-listing of the Yellowstone grizzly bear population. I believe that the proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Connie Anderson	Connie	Anderson	connielou56@comcast.net	PO Box 1421	Frisco	CO	80443	4/11/2016	<p>First the buffalo, now the grizzly bear! Upon what science are we basing our decisions to slaughter the buffalo; and now the most recent controversy - to remove the grizzly bear from the endangered list? Please, I know there are experts who know the facts. The decisions should be based on science. To me it is a scary thought that we think we should be playing a numbers game based on personal preferences instead of a genuine interest in protecting nature, our wild animals and their habitats. Please study the science of endangered species before moving forward with decisions that threaten our iconic animal populations!</p>

Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>This proposal to delist grizzly bears in Yellowstone is the most ridiculous to date. I have traveled in Yellowstone most likely more than anyone with Fish And Game and can vouch that grizzly sightings are few and far between.</p>

Diana Langie	Diana	Langie	contactdlangie@gmail.com	1439 Northwoods Rd	Deerfield	IL	60015	3/4/2016	<p>Wolves.</p> <p>Monarch Butterflies.</p> <p>Honey Bees.</p> <p>Bald Eagles- Our National Symbol Seen On Official Federal Seals, but rarely in their native North American habitats</p> <p>Mountain Lions.</p> <p>Grizzly Bears.</p> <p>All going the way of the Passenger Pigeon and the American Chestnut.</p> <p>Stains on the history, culture, honor, and name of our United States of America.</p> <p>Species extinctions are irreparable debts burned for eternity into the portrait of America, scorched on our collective character alongside the Genocide of North American Indigenous Peoples, the American Slave Trade, a literal Encyclopedia of War Crimes, Crimes Against People, and the Reckless Homicide of Seven Americans witnessed Live on television by Schoolchildren across the nation during the Launch Phase of the Challenger Space Shuttle.</p> <p>U.S. Fish and Wildlife Service Officials employed by American citizens as Public Servants possibly do not realize the true gravity of the stripping of Federal protections of Endangered and Threatened Species. Delistment does not change the fact that a species- a living part of our landscapes- will be permanently annihilated in the very near future if appropriate actions are not taken.</p> <p>My fellow American citizens and I have charged YOU, the Officials of the U.S. Fish and Wildlife Service, with the duty of taking appropriate actions for the protection of OUR nation's dearly beloved wildlife. Officials on the USFWS payroll, by whom I mean YOU, have failed in demonstrating basic competence in your assigned tasks that the shockingly offensive and destructive decisions made by the USFWS in recent years can no longer be considered passive or merely neglectful.</p> <p>As we, the American people, watch in horror, the USFWS has acted officially in ways which can only be called criminal. We are holding the U.S. Fish & Wildlife Service accountable for the shameless, twice-theiving practice of willfully allowing the American wildlife -which is PRIVATELY OWNED BY US, the private citizens of the United States- to be harvested as "trophies," often by ILLEGAL, most inhumane practices using FEDERALLY BANNED trapping and killing mechanisms, sending OUR BELOVED SPECIES rapidly spiraling toward extinction. American wildlife such as Gray Wolves, Red Wolves, Grizzly Bears, Mountain Lions, and Bald Eagles, among numerous other species (including species outside Kingdom Animalia), are our most precious and celebrated NATIONAL ICONS. USFWS criminally irresponsible actions against American wildlife are blatant insults to us, the American citizenry you are BOUND TO SERVE OR FACE DISMISSAL and, potentially, CLASS ACTION SUIT(S).</p> <p>Your decisions to strip our endangered species of their RIGHTS TO EXIST (yes, even wild animals have LEGAL rights; people, companion animals, as well as livestock, have rights, too) are considered as OFFENSIVE AS PERMANENT DEFACEMENT OF OUR NATIONAL IDENTITY. A sort of outrage that would be sparked if you covered the Statue of Liberty with hate speech and profanity using corrosive chemicals, to better understand your status among American citizens, officeholders, and other public servants.</p> <p>Until next time, Diana Langie</p>
Susan Cook	Susan	Cook	cook.sek42@yahoo.com	PO Box 617	Pilot Point	TX	76258	4/16/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth began in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which could harm bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>There are too many large animals that are being delisted to cater to trophy hunters. This MUST stop as bears are important in their ecosystem.</p> <p>Susan Cook PhD Animal Behavior</p>

Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>It's basic MARKETING not delisting. (I am in the marketing business so I know about this in terms of animal welfare, this is my career!) People and bears CAN coexist. We need to be EDUCATING people with more information and facts. WE humans (an ignorant public) can learn how to better behave in areas with grizzly bear populations and understand the importance of these amazing creatures, coexistence can happen.</p> <p>We can not let bears slide back towards extinction because of public ignorance and misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies, educate the masses, and develop adequate plans to be put in place at the state level to ensure, not endanger, their true recovery.</p>
Daniel Sullivan	Daniel	Sullivan	coreconcepts@comcast.net	PO Box 1855	Snoqualmie	WA	98065	4/12/2016	<p>Please, please do not de-list the Yellowstone grizzly from the endangered species act. I live in Pray, MT just north of Yellowstone National Park. The grizzlies are huge draw for Park County and an economic boost which would be severely impacted with a declining population with the hunting culture in Paradise Valley. Although some hunters certainly play by the rules, a significant % will not play by the rule and severely impact the grizzly population with senseless killing and trophy hunting. It took us so long to get to the current bear population we cannot afford to blow all the progress now. There are two proposed mines in the valley currently being fought. The mines would also directly affect the grizzly.</p> <p>Please review this issue systemically and consider the impact one species of this type has on the Greater Yellowstone eco system and the economic system.</p> <p>I am writing to urge you to postpone de-listing of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Constance Pepin	Constance	Pepin	cpepin@bitstream.net	4031 Zenith Ave S	Minneapolis	MN	55410	4/12/2016	<p>I urge you not to delist the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting with other populations.</p> <p>The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region. People and bears can coexist. We should not let bears slip back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Cynthia Morrow	Cynthia	Morrow	cpmasc@aol.com	1819 S Lumpkin St Apt 2	Athens	GA	30606	3/7/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>Trophy hunting is for the wealthy and ranchers are only too eager to kill them off along with the wolves. The Yellowstone National Park belongs to all Americans and especially to the creatures who live there,</p>
Carol Saul	C P	Saul	cpsaul@gmail.com	711 Amsterdam Ave	New York	NY	10025	4/12/2016	<p>I urge you to postpone de-listing of the Yellowstone grizzly bear population. The proposal to remove these animals from the endangered species list will KILL the progress made toward bear recovery. Why would you want to do that?</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. It has been held sacred by Western native peoples for thousands of years. Today the majestic grizzly has become a treasured symbol of the wild heritage we have too thoughtlessly destroyed. Tourists spend millions of dollars in the Yellowstone region every year, hoping to spot one of these great creatures. Would you short the communities that get a vital part of their local economies by de-listing the grizzly and hastening its extinction?</p> <p>The loss of the grizzly bear would be catastrophic for the entire region, and a slap in the face to wildlife professionals, conservationists and advocates who have fought to save them. And who, by the way, do vote.</p> <p>Grizzlies have made a shaky comeback. Their recovery is still by no means guaranteed. Do you realize that grizzly bears occupy less than 2% of their historic range in the lower 48? They reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the population has stalled since the early 2000s. In 2015 there was a 6% decline.</p> <p>THIS IS NOT GOOD FOR THE LOCAL ECOSYSTEM, FOR THE YELLOWSTONE REGION, AND FOR THE LOCAL ECONOMY.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies AT RISK. States want to reduce the grizzly population, including holding trophy hunts. Outside of national parks, the management of the grizzly population bears would be left completely up to states, which, due to prehistoric hostility to bears and other large carnivores.</p> <p>The current proposal would ENCOURAGE states to exceed maximum bear deaths FOR YEARS before holding any review. This would allow for potentially CATASTROPHIC AND IRREVERSIBLE damage to the entire eco-system. Complete eradication of bears is certain.</p> <p>In too many instances, trophy hunters can't tell the difference between a male and female bear. Their killings will NO DOUBT cause a steep, quick decline before action can be taken.</p> <p>And consider this: the Yellowstone grizzly population remains isolated. Limiting their range and their numbers any further could prevent them from connecting to other grizzly populations. That's limiting the gene pool to unmanageable proportions.</p> <p>People and bears can coexist. People and bears coexisted for thousands of years. We CANNOT let bears slide towards extinction because of misplaced and ignorant political hostility toward them. YOU KNOW WHO I'M TALKING ABOUT. It's time for you to think beyond trophy ranchers, land developers and trophy hunters. The heritage of grizzly bears BELONGS TO ALL AMERICANS.</p> <p>I believe it is your mandate to protect Yellowstone grizzlies until adequate and sensible plans can be put in place at the state level to ensure, not endanger, their recovery.</p> <p>I ask you to do that. Thank you for your attention.</p>
Phil Crabill	Phil	Crabill	crab430@me.com	902 W Eldorado Pkwy	Little Elm	TX	75068	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Cathy Sutton	Cathy	Sutton	csutton306@comcast.net	653 Woodview Drive	Noblesville	IN	46060	3/5/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. I was one such visitor. I visited Yellowstone with my family 4 times before I finally got to see a grizzly on camera scope. I came to Yellowstone to see the wolves and the bears - not to HUNT them! In the process I traveled through the surrounding states and spent money on the usual touristy things. I'll wager these states make a hell of a lot more money from tourists headed to Yellowstone than they ever could by selling tags to hunters. These state's economic future lies in OUR hearts, not the hunters guns.</p> <p>The proposed delisting leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which have been hostile to bears and other large carnivores. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their survival.</p> <p>Thank you for your consideration.</p>

Catherine Milbourn	Catherine	Milbourn	ctmilbourn@earthlink.net	325 Kennedy Ave	San Antonio	TX	78209	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the wild would make it difficult to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>

The short-sighted actions we have taken so far, and the path we are on, must be changed for the sake of our children, their children, and all the creatures on this planet.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p>

Donna Diduch	Donna	Diduch	d0nna_d@comcast.net	5339 S Leo St	Seattle	WA	98178	4/12/2016	<p>I am writing to urge you to postpone de-listing the Yellowstone grizzly bear population.</p> <p>The proposal to remove Yellowstone grizzly bears from the endangered species list would totally reverse the progress made toward bear recovery.</p> <p>Visitors spend millions of dollars in the region every year in the hopes of spotting a magnificent grizzly.</p> <p>The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still delicate and uncertain.</p> <p>Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years.</p> <p>In the Yellowstone region, the growth of the population has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the cross-hairs, as states have made clear their plans to reduce the population, including through trophy hunts.</p> <p>Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores.</p> <p>The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas.</p> <p>The loss of female grizzlies to trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken.</p>
Delores Nelson	Delores	Nelson	d7nelson@verizon.net	33 Crosslands Drive	Kennett Square	PA	19348	4/10/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list is a bad one. There are many more regular citizens who are excited about seeing the bears, than the again hunt the bears to near extinction. Please regulate their numbers by making some of them infertile, or by the use of other humane methods, rather than killing them. Killing rarely is a good answer to problem solving.</p>
Linda Ray	Linda	Ray	dadaray@hotmail.com	1125 Potrero Ave.	San Francisco	CA	94110	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone</p> <p>The grizzly bear is on the flag of California but they were wiped out here, I would hate to see that happen in Montana/Wyoming.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Debra Jepsen	Debra	Jepsen	dadogma@aol.com				54703	3/26/2016	<p>Animal Blessing Protect and bless all beings that breathe, keep all evil from them, and let them sleep in peace. I just do not understand the darkness. I do not understand how one creature (mankind) can perpetuate harm upon another. We are all one, we are all here as custodians of this planet, our home. This was not meant to be cruel and destructive towards our fellow beings of ALL here, right up until that moment we step off this planet.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Daniel Barwinski	Daniel	Barwinski	danbarwinski@hotmail.com	704 Moreau Ln	Estes Park	CO	80517	3/5/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the grizzly population grew in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, leaving them hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to poaching or difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p>

David Williams	David	Williams	davecwill@aol.com	8252 Raintree Drive	Albuquerque	NM	87122	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population from ESA protection. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth began in the early 2000s, and there was a 6% decline last year.</p> <p>Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations. Connecting with other populations would increase the genetic diversity of the bear populations and improve the health of the populations.</p> <p>There is another important factor that conservationists are loath to cite: the very success of the conservationists' programs to reintroduce wolves to the Yellowstone area. Wolves, hunting in packs, can successfully compete for prey with bears, which are solitary hunters, and from prey the bears themselves have killed. Bears did, of course, successfully coexist with wolves in a state of nature. However, if bears are protected only in the relatively limited Teton-Yellowstone park area, with no chance to mingle with other bear populations and with the area having to face high-powered rifles and high-tech hunting techniques, that is hardly a "state of nature"! The combined stresses of wolf reintroduction, limited protected area, and allowing hunting outside the parks would surely be detrimental to bear populations, probably leading to their extinction.</p> <p>At the very least, the U.S. Fish and Wildlife Service should wait many more years to see if bears can establish a healthy new equilibrium population competing with wolves and other environmental factors over the limited range available to them even without delisting from the endangered species list.</p>

David Hedges	David	Hedges	david@hedges.name				97068	4/6/2016	<p>Please please PLEASE! Removing Yellowstone grizzly bears from the endangered species list would be criminal in the mind of every American with half a brain!</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them, me included!</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
David Edwards	David	Edwards	david@riverbird.com	291 Limerick Ave	Eugene	OR	97404	4/12/2016	<p>This being a form letter does not negate the fact that it represents my feelings.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>I got up early on 9-7-15 in Yellowstone N.P. and drove more than an hour in the dark to arrive in the upper reaches of the Lamar River Valley before dawn. I wanted to see wolves and grizzly bears and I did. These animals should be protected so they may continue to grow and thrive in their natural habitat. I think the people who hunt both these species should be ashamed of themselves to call themselves sportsmen. Sportsmen are the best preservers of habitat and their intended prey, to maximize their own opportunities to hunt. Sportsmen are the best preservers of habitat and their intended prey, to maximize their own opportunities to hunt.</p>

Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>
David Butler	David	Butler	dbme6846@gmail.com				97405	4/7/2016	<p>Delisting the Greater Yellowstone grizzly is premature, if not flat out wrong. Please drop this even as a discussion point. As we've seen in Oregon, delisting of an animal (wolves) led to an immediate--as in four days--war against them by ODFW, with four killed--including a mother and her cubs.</p> <p>Any consideration seeming favorable to delisting is outweighed by their right to live and roam in a protected refuge, Yellowstone. Thank you. David Butler. Eugene Oregon.</p>

Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Here in Florida brown bears were taken off the endangered list, hunted and over 300 were killed in one week. No need for bear meat so what are we dealing with? Hunters' egos. Let's put that at the bottom of the list and let the bears alone. The need to move into the areas that have no serious threats to people have occurred so what's the need to reduce their numbers?</p>

The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Dennis Nelson	DENNIS R. NELSON,	Naturalist/Environmental Researcher	dennisnelson987@yahoo.com				60680	3/17/2016	<p>IT IS TOO SOON TO REMOVE THE PROTECTIONS UNDER THE FEDERAL ENDANGERED SPECIES ACT (ESA) FOR THE GREATER YELLOWSTONE [ECOSYSTEM] GRIZZLY BEARS!! I am one of the original, modern environmental/conservation activists "EARTH DAY Celebration" (Wednesday, April 22, 1970), which will be 46 productive and exciting years next month. I have a Bachelor of Science (B.S.) Degree in Biology and Environmental Studies from Dana College, Blair, Nebraska. Even though I have never had the Yellowstone Ecosystem, I have spotted Grizzly Bears in Alaska during my "Two Great Alaskan Adventures" (July, 1993, and July, 1995): During a shuttle bus trip through the interior of Denali National Park (at Sable Pass), and during a trip on the Alaskan Railroad from D CONTINUING ON, I AM URGING YOU TO POSTPONE THE 'DELISTING' OF THE GREATER YELLOWSTONE [ECOSYSTEM] GRIZZLY BEAR POPULATION!! The proposal to remove Greater Yellowstone Grizzly Bears from the Endangered Species List FA toward "bear recovery." (In fact, it will REVERSE IT!)</p> <p>The Greater Yellowstone Grizzly Bear is one of our nation's most iconic species. Being held sacred by American Indian/Native American communities for thousands of years in the West, the majestic Grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region each year (and, hopefully, I will be one of them eventually), a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent Grizzly Bear. The loss of the Grizzly would be a loss for the entire region, and a disservice to the wildlife professionals and dedicated conservationists (like yours truly) who have worked hard to save them.</p> <p>While Grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly Bears occupy less than 2% of their historic range in the "lower 48 contiguous states" and reproduce very slowly, at a rate of only 1-3 cubs every few years. Within the Greater Yellowstone region, the growth of the Grizzly Bear population has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone Grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. The management of Grizzly Bears outside of the national parks would be left completely up to the states, which have been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female Grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Greater Yellowstone Grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist! We should not let Grizzly Bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. IN CONCLUSION, PLEASE PROTECT GREATER YELLOWSTONE [ECOSYSTEM] GRIZZLY BEARS UNDER THE FEDERAL ENDANGERED SPECIES ACT UNTIL THERE ARE ADEQUATE PLANS AT THE STATE LEVEL TO MAKE SURE THAT THEIR TRUE RECOVERY IS CARRIED OUT, RATHER THAN BEING ENDANGERED!!</p>
Sonia Begert	Sonia	Begert	desertrose_mmx@comcast.net				98370	3/18/2016	<p>Having spent time in Alaska watching grizzlies I can attest to the beauty and importance of their presence. I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p>
Diane Harper	Diane	Harper	dianecropper@gmail.com	2840 E 6th St Apt 1	Long Beach	CA	90814	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. We MUST save generations. Predators are needed to keep our ecosystems as they should be.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region, visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Donna Mielke	Donna	Mielke	dlnielke5@aol.com	319 E Hickory Street	Hinsdale	IL	60521	4/12/2016	<p>I first visited Yellowstone with my parents and sisters when I was 12. We camped in a hard-sided trailer - the area we were in was off-limits to tents because of the presence of bears. I have returned many times, most recently just this past summer with my own children. The nature as it was before settlers disrupted the natural order of things. The fact that there are roads and campsites is disruption enough. By our mere presence we endanger animals. On that long ago trip with my family, a bear was captured in our camping area and relocated to a safe area. ALL we can do to protect wildlife, and that means KEEPING Grizzlies on the endangered list to afford them every possible protection!</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>NO ANIMALS SHOULD EVER BE ENDANGERED!!!</p>

Linda Schneider	Linda	Schneider	dogsln@earthlink.net	808 26th St S	Arlington	VA	22202	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the grizzly population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would be hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunters to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery. Also, more efforts should be made to educate people about the best ways to manage coexistence with bears to preserve harmony and safer for people and bears. Shooting or killing bears should not be the presumed solution. Moreover, climate change is adding to the challenges facing grizzlies, including bears. It's too soon to remove protections for bears!</p>

Donald Robinson	Donald	Robinson	don.robinson.jr@comcast.net	12 Wyndham Ln	Chester Springs	PA	19425	3/4/2016	<p>I urge to postpone the delisting of the Yellowstone grizzly bear population since removing them from the endangered species list fails to preserve the progress made toward bear recovery. It will result in progress reversal.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage.</p> <p>Visitors to Yellowstone spend millions of dollars in the region every year; my family was part of that local economy story back in 2012 and based in no small part on the chance of seeing iconic Western species such as grizzlies and wolves. We scored on both counts, getting more cubs than I would have ever expected.</p> <p>As you know, grizzlies are a major predator in the Greater Yellowstone eco-system and are part of that essential balancing act between flora and fauna that has been restored in recent years thanks to good wildlife management science.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the grizzly population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Thank you for your support.</p>

We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p>
David Scott	David	Scott	dsopacum@gmail.com	1364 Powderhouse Rd SE	Aiken	SC	29803	3/4/2016	<p>Just look at what delisting did to wolves in the same geographic area--catastrophic and barbaric state (with the aid of Wildlife Services of course) "management" plans. Within the uncertain impacts of climate change ahead of us, it is far too early to delist grizzlies. As a result, the grizzly bear's protected status for the Yellowstone grizzly bear population.</p>

David Stermer	David	Stermer	dstermersr@aol.com	165 Valley Rd	Windsor	PA	17366	3/3/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery. Why would you do this, it makes no sense to me.</p>

Management of grizzly bears outside of the national parks would be left completely up to the states, which bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Elaine Hudson	Elaine	Hudson	ead2d3d@gmail.com	820 N 11th St	Dekalb	IL	60115	3/6/2016	<p>U.S. Fish and Wildlife Service, Please do not delist the Yellowstone grizzly bear. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made regarding these bears, still in recovery.</p> <p>Large animals have a slow reproductive rate. Climate change disrupts key, grizzly food choices. Young grizzlies don't always make it to adulthood. To bring back the hunting of grizzlies when their numbers are low and they are handicapped in multiple ways is a misstate.</p> <p>U.S. Fish and Wildlife Service, this is too soon to remove the ESA protections for Greater Yellowstone grizzlies. Your hunting proposal is ill conceived.. It is a flat out terrible proposal that will put these essential wild west icons, grizzly bears, at serious risk along with their land.</p> <p>My family regularly visits America's wild lands, and the greatest joy of those trips is to see animals of all types in their native surroundings, but best of all is the spotting of large mammals: wolves, deer, elk, bears, grizzly bears,, further North, polar bears. Of these animals, the grizzly bear is the most prized, not for being a lifeless dead head on a trophy hunters wall; But, for the support they give a healthy ecosystem.</p> <p>The grizzly bear is held sacred by native American communities with good cause. The grizzly is a treasured symbol of our American West. The loss of the grizzly would be a loss to the health of the entire region, a loss to indigenous people, conservationists, and professionals. The short term loss of grizzly bears would be too great a cost to pay, so a few private trophy hunters can put a dead head in their home, when the living animals could be enjoyed by multitudes all over our country and beyond. Europeans come here expressly to see what they call the grizzly bear.</p> <p>U. S. Fish and Wildlife Service, you do our country a disservice removing the grizzly from Endangered Species protections. "Grizzly bears occupy less than 2% of their original range in the lower 48 and reproduce slowly, 1-3 cubs every few years. In the Yellowstone region, the growth of the population has stalled since the early 2000s, and there has been a 6% decline in the last year. The loss of grizzly bears would make it harder to making grizzly lives harder, and our lives less rich.</p> <p>The proposed delisting proposal and hunting will significantly reduce grizzly populations. Grizzly bears outside of the national parks would be left to inhospitable states; states unfriendly to predators.</p> <p>The value of carnivores is not broadly understood. If predators were understood, no state would allow bear deaths before a census was taken, before a review or study of damage was assessed. No eradication would be allowed. The loss of female grizzlies to trophy hunting would be a disaster.</p>
Virginia Metcalf	Virginia	Metcalf	eeagle3280@gmail.com	8814 30th Street Ct NW	Gig Harbor	WA	98335	3/4/2016	<p>There is no reason to delist the Yellowstone grizzly bear from the endangered species list. Hunters and others only interested in their self-gratification or greed may lobby and tell you otherwise but that is no reason to remove the Grizzlies from the endangered species list. That should not be ignored. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>As you are very well aware, The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly bear.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the population has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting would be a disaster. The difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please use whatever power of office you might have to protect rather than kill the Yellowstone grizzlies.</p>
Elaine Anthonise	Elaine	Anthonise	eeanthonise@gmail.com	16830 SE 43rd St	Bellevue	WA	98006	3/3/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Edward Fyffe	Edward	Fyffe	edfyffe@yahoo.com	1567 Wilder Ave Apt 2	Honolulu	HI	96822	3/3/2016	<p>Your de-listing method is one solution, and so would be to allow all problems confronting us to be resolved by gun slingers. What is wrong with the Service? Your proposals get loopier and loopier as the months and years scroll by, and what is beautiful and meaningful about a matter of memory, to witness only in films and read about in books.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p>

Barbara Edgar	Barbara	Edgar	edgar002@umn.edu	1854 Laurel Ave	Saint Paul	MN	55104	4/17/2016	<p>One study not reported is how many gun owners/hunters would give a lot to be able to shoot a grizzly bear - for "sport" or body parts or bragging rights.. I think you'll find that the answer is lots of them.. The question is not should we delist, but how many bears would be allowed out west after their delisting should give you pause. Therefore, I urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which have been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Even the elk her summer in the high country to where they have winter grounds is threatened since so much land on the border of the park is now being developed. What will they do?</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Elizabeth Rausch	Elizabeth	Rausch	elizrausch@msn.com	8914 Magnolia Chase Cir	Tampa	FL	33647	4/12/2016	<p>Dear Director Ashe,</p> <p>I want to add a personal message to the "canned" message shown below. I am a huge fan of the National Park System, and have visited 35 national parks, spanning from Acadia to Haleakala. My favorite, by far, is the Yellowstone/Grand Teton complex. My greatest wish d to see a grizzly, which unfortunately wasn't fulfilled. But, I knew they were there and that they were protected, which gave me a lot of peace. I understand that delisting the grizzly would not affect their protected status within the parks, but park boundaries are irrelevant to a youngsters, or a young male looking for a territory and a mate. I implore you to allow these animals to retain their endangered species protection. I still hope to see a grizzly one day. With your help, maybe I can fulfill that wish.</p> <p>Thank you for taking the time to read and consider my request.</p> <p>Elizabeth Rausch</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p>

Emma Newsom	Emma	Newsom	emma.newsom@cengage.com				6770	3/17/2016	<p>Hello, Please postpone delisting the Yellowstone grizzly bear population! The proposal to remove Yellowstone grizzly bears from the endangered species list will reverse the progress made toward bear recovery. These creatures deserve to live without threat.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Gail Richardson	Gail	Richardson	envirogail@q.com	5263 Cimmeron Dr	Bozeman	MT	59715	3/5/2016	<p>We have lived, worked and recreated in Greater Yellowstone for 40 years and met working in Yellowstone. Through 40 years of backcountry hiking and backpacking we have never been threatened by a grizzly bear, although we have reveled in witnessing many in the wild. The Great Bear should remain listed. It is an isolated population that has experienced food stress in the past decade as cutthroat trout and white bark pine nuts have declined. The population has been stable but not growing since 2000. There has been more human caused mortality than natural causes, and recent data shows that females with cubs growing to adulthood is not improving. Delisting is premature. We urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. Trophy hunting is an abomination. The grizzly is our state animal that has been relegated to a sliver of its prior range. Depredation removals are already taking place and can continue, but trophy hunting is unnecessary and a chomping at the bit to make money from trophy hunting. This must be taken off the table.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>You must use the best available science to support delisting; we do not believe you have met that threshold. There is plenty of dissention among wildlife professionals. You have allowed state wildlife agencies which depend on hunting for their budgets and private ranchers to continue to hunt. We are conservationists who value our treasured native wildlife and our precious public lands. We expect you to act in the public interest, not in the self interest of the state wildlife agencies who continue to allow the decimation of our native predators; and not in the self interest of those who continue its dominance of politics in the west. You must stand up for our vulnerable native predators. The Great Bear is our natural heritage and we will not sit idly by and watch it relegated to smaller and smaller portions of its historic range and less genetic diversity because of trophy hunting.</p>

It makes no sense since these majestic bears are still endangered. It might seem that there are too many bears, but that is only because humans have taken away their homes due to deforestation; therefore, these bears are their fault but ours. Certainly there is a way for humans and the bears to live together. It's been done for years. Don't endanger these grizzlies any more than they already are.</p>

Frank Schmidt	Frank	Schmidt	f.schmidt@mchsi.com	505 Silver Thorne Dr	Columbia	MO	65203	3/3/2016	<p>Nearly fifty years ago, I spent a summer in Bozeman MT, 80 miles North of Yellowstone Park, as a research intern in an NSF-sponsored undergraduate program. Weekends, we would pile into an old Chevy and head to the Park in search of wildlife and girls, not necessarily successful finding wildlife; the girls wanted to hang out with the Rangers.</p> <p>At the time, the West Yellowstone dump was the place for grizzly sighting. I was saddened by the results of human mismanagement as these magnificent animals were pawing through the debris. As a result I strongly supported the protection of the grizzly population under the return of the population to a more native state.</p> <p>Lately, however, the population of bears in the Yellowstone ecosystem has not expanded; rather, as the NPS website admits, the rate of growth has slowed and the population presumably is stabilizing. All this has happened while grizzlies are listed as threatened and protected. Delisting the population would only make matters worse.</p> <p>The consequences for an ecosystem as even a small proportion of top predators are removed are profound. Removal of top predators affects plant and animal life all the way down the food chain, and even alters the hydrology of an area. This should be apparent from the exponential growth of the population.</p> <p>Please do not allow the degradation of the ecosystem by trusting this keystone species to the tender mercies of adjoining states, who, when under pressure from the trophy hunters, have too often succumbed, leaving the ecosystem, and all of us, poorer.</p>

Fred Leonard	Fred	Leonard	fdleonard@yahoo.com	1542 Southview Dr	Prescott	AZ	86305	3/3/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the continental United States, and they reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the grizzly population has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to end trophy hunting and ensure recovery.</p>
Juanita And Fred Leonard	Juanita And Fred	Leonard	fdleonard@yahoo.com	1542 Southview Dr	Prescott	AZ	86305	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Frank Glass	Frank	Glass	frank.glass@hp.com	1282 NW Skyline Dr	Albany	OR	97321	4/10/2016	<p>I urge postponing the delisting of the Yellowstone grizzly bear population. Removing Yellowstone grizzly bears from the endangered species list can only reverse the recovery progress made so far.</p> <p>Grizzly recovery is still uncertain: they occupy a tiny fraction of their former range; they reproduce very slowly. In the Yellowstone region, the population has stagnated since the early 2000s, with a 6% decline last year.</p> <p>States historically cannot be relied on to manage for sustainable carnivore/omnivore populations, and indeed express the intent to reduce the population, through trophy hunts and other means. The current proposal would allow states to exceed maximum bear deaths for year irreversible damage, and would allow complete eradication of bears in some areas. The inability of trophy hunters to tell a bear's gender could easily cause an overly severe reduction of females. And the Yellowstone grizzly population is isolated, meaning lowering their num eventual eradication.</p> <p>Why would we want to risk a world absent the mystery and magnificence of these creatures? We must not risk their extinction because of a misguided hostility. The inevitable result of this proposal will be fewer bears, limited to an even smaller portion of the Yellowstone r unsustainably tiny population.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans at the state level to ensure their recovery and ongoing preservation.</p> <p>Thank you.</p>

The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Glenn & Roberta Valentine	Glenn & Roberta	Valentine	fuzzy_antler@yahoo.com	321 Kimi Ct	Casselberry	FL	32707	4/12/2016	<p>We are writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone</p> <p>We've already seen what kind of slaughters can happen. The bears in Florida, and the wolves in the Rocky Mountain states. Let's STOP this nonsense!</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Gary Albright	Gary	Albright	gary@wildlifecomputers.com	21613 Echo Lake Rd	Snohomish	WA	98296	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please do everything you can to protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
