Barbara Geller	Barbara	Geller	gellerbj@gmail.com	610 Hunters Way	Bozeman	MT	59718	4/7/2016	<p>Please don't allow the state to allow hunting of grizzly bears. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken.</p> <p>Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Elizabeth Dubreuil	Elizabeth	Dubreuil	gene@lohrmeyer.com	17717 56th St NE	Snohomish	WA	98290	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly.</p> <p>We spent our vacation there last year and our biggest wish was to see a grizzly bear in the wild. We were so privileged to see Old Scar Face himself. He's probably the oldest grizzly in the US if not the world and he survived in part due to the protection the bears receive. His presence is a source of pride for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>I was also fortunate enough to work in the Targhee NF in the 90s and I saw grizzly during my fieldwork in the Centennial Mountain range. What a feeling of absolute awe to see them while hiking. To see that they are not monsters as some would try to tell it and that they do exist is a gift that generations have a chance to experience the same. Protection of them and their habitat is critical to keeping American one of the best places to see wilderness.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of the population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
VirginiaKay Metcalf	VirginiaKay	Metcalf	gingamet@comcast.net				99212	3/15/2016	<p>Thank you for taking the time to consider this message. I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Virginia Rosenbaum	Virginia	Rosenbaum	ginnycat5@yahoo.com	1133 Judson Ave	Evanston	IL	60202	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Maria Gonzales	Maria	Gonzales	gonzalesmr@roanestate.edu	950 Crooked Oak Dr	Lenoir City	TN	37771	3/3/2016	<p>I And here we go again!! Another species that for some reason, the very organization designed to protect these animals, doesn't give a crap that we could lose another one of God's creatures. Why is it that some of us have to fight for their right to live? God did create this grizzly bear, and we are listing it? We all know what happens when we allow this crap to happen. We end up with such low numbers that we basically kill them off except for those in the zoos. Yeah...that's what we need to do. Let's just kill off all the wild animals and just have zoo animals to represent them. It's pathetically sad when we have to constantly fight you people!!! This is just PLAIN common sense!!!!</p>

We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Grace Macy	Grace	Macy	gracemacy@ymail.com				90232	3/20/2016	<p>Do you really think (or not care) that, once you delist the Grizzly, avid trophy hunters won't swarm out of the woodwork and decimate the population, reversing years of progress!? Your job includes a MORAL RESPONSIBILITY to protect wildlife -- NOT the potential income of trophy hunters.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Greyling Gentry	Greyling	Gentry	greyling.gentry@gmail.com	13508 NE 70th St	Redmond	WA	98052	4/11/2016	<p>I urge you to cancel delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of the grizzly population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to the public would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Steven Clevidence	Steven	Clevidence	guardian_blues@yahoo.com	153 Garnet Dr.	Stevensville	MT	59870	3/4/2016	<p>The grizzly has the second slowest reproduction rate of all North American mammals, making it harder for it to rebound from threats to its survival. Females do not reach breeding maturity until they are 4 to 9 years old and generally give birth to two cubs every 3 years. On occasion, one or three cubs may be born to a female, but two is the more common number. Cubs remain dependent upon their mother's milk for almost a year, stay with their mother for 2 to 3 years, and reach breeding maturity at about five years. In some cases they may not breed until 8 or 9 years of age. When they do reach breeding age, females only breed every other year. Considering the near zero tolerance level towards predators, omnivore or carnivore, (wolves as an example) that states like Idaho has, it is far too early to consider removing the Grizzly bear from a threatened status and allow the animal to be hunted. I don't have a problem with that. I do not believe some wildlife agencies will manage the bears in a way that will maintain the sustainability of this specific species. ~ Steve Clevidence/Montana</p>

The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunting, the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Vicki Anderson	Vicki	Anderson	gurlcatrider@gmail.com	3203 Lugustrum Dr	Hernando Beach	FL	34607	4/11/2016	<p>I AM A REAL PERSON!! Pls don't discount my concerns because I am taking advantage of this format!!!</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Karen Crum	Karen	Crum	hepzibahh@aol.com	6701 Evergreen Ave	Oakland	CA	94611	3/4/2016	<p>I strongly oppose any delisting from Endangered Species Act protection of the Yellowstone Grizzly by the US Fish and Wildlife Service and urge you to postpone delisting. The proposal to remove Yellowstone grizzly bears from the endangered species list not only fails to p bear recovery, but will reverse any gains that have been made.</p> <p>We should act slowly and conservatively in considering removing endangered species protections. While grizzlies have made some progress in population recovery, they still occupy less than 2% of their historic range in the lower 48 states. They reproduce very slowly, at a r which means small changes in their circumstances can have large effects on the population. Further, as all species are, the grizzly is suffering the effects of climate change in the loss of key food sources. In the Yellowstone region, population growth has stalled since the early last year.</p> <p>The proposed delisting threatens this Greater Yellowstone grizzly because it will open the way for states to enact existing plans to reduce the population, including by means of trophy kills. Management of grizzly bears outside of the national parks would be left completely t from ranching interests especially, have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, which could cause potentially irreversible damage to populations and a areas. Hunters may not be able to tell male from female, and the loss of female grizzlies especially could cause a steep, quick decline before emergency action could be taken. Also, the Yellowstone grizzly population is isolated, which in itself is already a negative pressure o further limit their range and numbers could exacerbate this, and could prevent them from ever connecting to other grizzly populations.</p> <p>We humans don't have the right ? or the perspective ? to "manage" wildlife, and certainly not by hunting or so-called "sport" killing which grizzlies would face if the ESA protections were lifted. Earth evolved its varied species in a self-regulating balance; humans don't have i and only cause harm when we try. Grizzlies are not only a crucial apex species in their ecosystems, but each is a unique individual born with a right to exist and make his way without fear of being stalked and murdered by cowards with guns. Killing individuals devastates fa offspring vulnerable; it also diminishes the genetic diversity needed for healthy populations, which in turn affects all the prey and plant species regulated under healthy keystone predator populations. To in any way permit or encourage hunting of these or any animals is a disg for the unconscionable threat and potential loss of this population.</p> <p>In the narrower view, visitors to Yellowstone -- some of whom come to try to see the grizzly in this habitat, while others come to see the habitat upon which the grizzly, as apex predator, has an effect -- spend millions of dollars in the local economy every year. The loss of th Yellowstone ecosystem in which they function and a loss to the economy of the local region. Further, delisting would be an insult to the wildlife professionals, dedicated conservationists and wildlife advocates who have worked and fought tirelessly to save them.</p> <p>People and bears can coexist -- as we have for millennia. We must not be responsible for threatening the grizzly with extinction by caving to pressure from misguided, anti-scientific ranching and hunting interests. Please continue the Endangered Species Act protection of Ye recovery.</p>

Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Edna Hibbitts	Edna	Hibbitts	hibbitts@suddenlink.net	2101 Oaklawn Dr	Midland	TX	79705	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. Humans need to protect wilderness areas.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the bear.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves the hostiles to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>

Hilary Flood	Hilary	Flood	hilarykflood@gmail.com	533 Crofton Ave Apt 2	Oakland	CA	94610	3/3/2016	<p>Hi there,</p> <p>I just received word via the Sierra Club (Bay Area) that discussions regarding removing the Greater Yellowstone grizzly from the Endangered Species list are happening. I am writing to urge you to postpone their delisting. I believe that the proposal to remove Yellowstone g species list will fail to preserve the progress made toward their population's recovery. In fact, based on the disregard I've seen pertaining big game/wildlife hunting, it may even reverse it.</p> <p>The following copy is from the template provided to me by the Sierra Club, but that does not mean it is not true... "The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, t treasured symbol of our wild heritage. Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire regi professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and e recovery.</p>

Muhammad Thompson	Muhammad	Thompson	horus.eye@tulalipbroadband.net	1520 Marine Drive NE	Tulalip	WA	98271	4/10/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region, which is hostile to hunters to kill animals so they can stuff them or of cattlemen who want to have more free range on public lands for the ridiculously low leases they pay should be of no consideration in this. We need to keep hunters and ranchers out of the grizzlies' territory, not vice versa. And we need to protect the bears, wolves and bison all need uniform, across-the-board Federal protection with severe penalties for anyone that violates that protection.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Howard Christiansen	Howard	Christiansen	howard_christiansen@hotmail.com	PO Box 6202	Bozeman	MT	59771	4/11/2016	<p>April 10, 2016</p> <p>To: USFWS committee to consider de-listing of grizzly bears from the Endangered Species list</p> <p>From: Howard Christiansen PO Box 6202 Bozeman, MT 59771</p> <p>The reason to make this comment now is to protect the grizzly bear of Montana and to call attention to the importance of considering how our human values affect these kinds of actions to reduce our stewardship of the wilderness and her residents. We need to include a comment on how they affect our decisions that have a critical impact on the species of these wilderness and national park areas.</p> <p>I want to prevent de-listing of grizzly because I value grizzly and wilderness. The two need each other and we can only have both if we protect them as one. These thoughts are consistent with my human values. My spirit and the spirits of all of us need wilderness and the many species of wilderness. The USFS suggests to all its employees that they read the book, The Practice of the Wild by Gary Snyder. I have read it and have integrated it into my thoughts.</p> <p>Good wildlife science has produced solid evidence that these Great Bears still need to be fully protected by the Endangered Species Act. That research that has been done and elucidated by Dr. David Mattson. The scientific work done by David is at the cutting edge of science.</p> <p>So, who am I? I'm a life long Montanan, a scientist, and I've talked to people who have different opinions from my own. I was born in Montana and have lived over 50 years of my life here, with 39 of the last 40 in south central Montana. My great great grandfather came to Montana 16 years old to homestead near Chinook in 1880. I've backpacked and climbed in 10 different wilderness areas or wilderness protected status areas and 2 national parks of Montana. Of course, all had bears and nearly all had grizzly. I need grizzly to be protected and I know, as a geologist, how to recognize top notch scientific research. I recognize that the evidence presented by Dr. David Mattson is excellent. You should heed his words now. He says that climate change has so seriously affected the foraging requirements of grizzly that we cannot effect an assessment of future climate change affects on their numbers. As a student of atmospheric chemistry and climate science for over 20 years, I know how variable the future of conditions of grizzly habitats will be. The future affects of climate change have already begun for grizzly.</p>
James Lazell	James	Lazell	hlazell@theconservationagency.org	1140 Monroe St	Jackson	MS	39202	3/9/2016	<p>I am a professional biologist with a long career invested in conservation writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made and will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure</p>
Iggy Makarevich	Iggy	Makarevich	iggymak@gmail.com	67 Valley Rd	Cos Cob	CT	6807	3/3/2016	<p>I am writing to urge you to disallow the delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region, local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone. Please do not put these beautiful animals on the "go ahead and kill list"! That is exactly what will happen if they are no longer "protected!" Hunters are "chomping at the bit" to be allowed to once again hunt them down and kill them! I do not think they kill them as a need for then left in the woods! Once they have the thrill of shooting one, they began searching for another, and another, and another! That's the thrill not needing food, but the bragging rights of being the "best" hunter, The limits on how many are killed, if there even is one, can't possibly "hunters" outnumber the wildlife observers who are supposed to enforce the "limit" law! We, the People are asking our lawmakers to reconsider the "slaughter" of Grizzlies and do the right thing for these bears!!</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Ivylle Anderson	Ivylle	Anderson	ivylleanderson@gmail.com	446 County Road 381	Verbena	AL	36091	3/7/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The American people are fed up with being ignored. Back off the bears and all other wildlife you have taken upon yourself to declare war! You know nothing about wildlife so why would you possibly want to destroy any member of our magnificent wildlife population or allow any import of body parts from wildlife of other countries. Special interest is the reason since it is thrown at you in the form of a payoff, personal or otherwise. You do not represent the people on many subjects; we have always had to trust you. Well, we no longer trust you and have not for a long time. We are in the middle of a campaign for President plus other positions and look from whom we are expected to choose. Everyone, other than the people who do not appreciate this country and either do not vote or sit disgraceful actions of both parties and those campaigning to be President. We expect representation which is the reason you are there. You are also expected to move for the welfare of this country and our environment which includes our wildlife; also, marine life. You spend too much time scheming to add to this or that bill and be sure to leave loopholes wide open. The latter especially burns me because of our K-9 Veterans being redeployed due to a loophole in the contract with contractors w/ dogs....the same dogs that have kept so many of our troops safe in order to come home to their country and their families; the handlers of these dogs want to bring them home to keep that strong bond, but "NO" says the loophole. These K-9s are veterans; I thought we left no veteran. This is only one matter that should be immediately corrected and any dog already deployed a second time be returned. Just do whatever it takes to discontinue the use of any dog which cannot be referred to as a military veteran and receive lifetime health care and protection under the DOD. No more slipping in additions to a bill especially when it in no way has anything to do with that bill, and no more loopholes; there must be a well educated and most knowledgeable attorney in the House and in the Senate. Do what is right.....for everyone and the country.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect Grizzly bears are an essential piece of the American West, a wildlife icon that has been integral to the Yellowstone region for centuries. Each year, visitors spend millions in the region, hoping to catch a glimpse of a grizzly, this beautiful and powerful symbol of our wild heritage. The presence is crucial to the health of wildlife in the Greater Yellowstone region.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to poaching to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>
Jackie Stocks	Jackie	Stocks	jacquelynstocks@gmail.com	3733 SE 167th Ave	Portland	OR	97236	3/4/2016	<p>"The time is always right to do what is right." ~ Martin Luther King Jr.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect Grizzly bears are an essential piece of the American West, a wildlife icon that has been integral to the Yellowstone region for centuries. Each year, visitors spend millions in the region, hoping to catch a glimpse of a grizzly, this beautiful and powerful symbol of our wild heritage. The presence is crucial to the health of wildlife in the Greater Yellowstone region.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. James Shelton	James	Shelton	james_shelton32@yahoo.com	811 Roehampton Ct	North Chesterfield	VA	23236	3/4/2016	<p>My family has gone to Yellowstone every 15 years for the past 75 years. Five hundred individuals is too low to maintain a population for a certain ecosystem without inbreeding and gene vulnerability being a problem. These should stay over 1000 if they are now at 1,500 and I hate to see this population be extirpated due to stress from climate change reducing the conifer seeds and a population with limited genetics falling prey to disease which would leave America's greatest park without its major icon and a great loss for these ecosystems in general.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. John Thaw	John	Thaw	jdthaw@comcast.net	5920 NW Pinewood Pl.	Corvallis	OR	97330	4/12/2016	<p>I am writing to you to request you to protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery. As an apex species, grizzlies are an incredibly important part of their environment. Without connecting your islands, mainly parks, where species diversity will dwindle, even without the additional stress from climate change. Politics and economics (greed) should not be substituted for scientific decisions. Your goal should be keeping the ecosystem healthy and intact. Delisting grizzlies goal. Good luck.</p>

The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. I know that hunt animals still deserve protection. Unfortunately they can't speak, nor can they "grease palms!" :-(</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the grizzly population has been slow, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting with other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Jeanlynn Howard	Jeanlynn	Howard	jeanlynnstpierre@gmail.com	1 Colby Rd.	Sterling	MA	1564	4/25/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. PLEASE!! Leave your family invaded upon and wiped out?! These are feeling, living creatures that love their own families.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. This can only hurt the bears and seems to be no downside to keeping the bears listed. Common sense should win out.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would be hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
J Frankland	J	Frankland	jfrankland00@gmail.com	1 Main St	Shenectady	NY	12345	4/10/2016	<p>LEAVE NATURE ALONE!!! In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>Can't this stuff just please stop, why do people have to live on this earth when this kind of stuff is so upsetting and makes you cry and want to give up. Death for humans by lethal injection by choice all this misery would not stop but you would never know you would be going to quit taking over the animal territory and killing them when it's their land. This makes my question the same is there such a thing as heaven is there really a God. If so this would not happen.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Jonathan Matthews	Jonathan	Matthews	jmatthews@carroll.edu	1633 Flowerree Street	Helena	MT	59601	4/7/2016	<p>Please stop the delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure</p>

Johanna Smith	Johanna	Smith	johannasmith@uta.edu	3321 Reagan St	Dallas	TX	75219	3/4/2016	<p>I am writing to urge you to postpone removing the Yellowstone grizzly bear population from the endangered species list. The proposal fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still delicate and uncertain. Grizzly bears now occupy less than 2% of their historic range in the lower 48. They reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the grizzly population has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including trophy hunts. Management of grizzly bears outside the national parks would be left completely up to the states, which are often hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, enabling potentially irreversible damage and, in some areas, eradication of bears. The Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from connecting to other grizzly populations.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Terry Eaton	Terry	Eaton	john.and.terry@gmail.com	10824 NE 172nd Ave	Brush Prairie	WA	98606	4/22/2016	<p>I am writing to urge you to postpone an avoid delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our heritage. Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of the grizzly population has been slow since the early 2000s, but additionally there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the serious danger. States have made clear their plans to reduce the population. They are even allowing trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are often poor stewards of our national natural treasures, and historically have even been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can and do coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the range.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
John C Adams	John	C Adams	johncadams516@gmail.com	3277 Appian Dr	John	LA	70065	4/12/2016	<p>I am writing to urge you to stop the delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growt the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. Joyce Hofmann	Joyce	Hofmann	joyce.e.hofmann@gmail.com	904 S Orchard St	Urbana	IL	61801	3/8/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by Native Americans for thousands of years, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region every year to visit Yellowstone National Park in the hopes of spotting a grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave grizzly bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review. The loss of female grizzlies to trophy hunters who can't tell the difference between a male and female bear could cause a steep, quick decline before emergency action could be taken.</p> <p>People and bears can coexist. We should not let bears slide towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Joyce Crowley	Joyceived in Libby, where Grizzly Bears	Crowley	joycecrowleyart@gmail.com				67203	3/22/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. I lived in Libby, MN, and relocated from Yellowstone in the 1990s, mostly problem bears, as long as they don't develop Treasure Mountain, there is room, to relieve that pressure! The Grizzly is the great symbol, and if we stop cutting national forests turning to Hemp for better quality paper, and protect our wildlife, and Healthier Environment, a Challenge of our times! Less resource destruction with green energy, will make us a richer, and more diverse nation!</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region every year to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the grizzly population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave grizzly bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunters who can't tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Julie Hukee	Julie	Hukee	julieahukee@gmail.com	139 Bluebird Ct	Basye	VA	22810	3/8/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the species.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p>

The bears need more time and resources to recover.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year. It's about the bears, not about tourist dollars - the bears deserve a safe place to grow.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would be hostile to bears and other large carnivores like wolves. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery. Bears (and wolves) are an important part of the ecosystems outside the park too!</p>
Judith Roberts	Judith	Roberts	jwr110@comcast.net	542 Kristina Cir	State College	PA	16803	3/4/2016	<p>Grizzly bears are the ultimate trophy for hunters. Mindful of this, I urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. The bears need more time and resources to recover.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure</p>

Karen Briscoe	Karen	Briscoe	karen.ann.briscoe@gmail.com				77401	3/28/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the grizzly population has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which is hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Karen Gould	Karen	Gould	kareng.javanet@comcast.net	22 Long Plain Rd	S Deerfield	MA	1373	4/12/2016	<p>Please help the world stay alive. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their RECOVERY IS STILL a DELICATE and UNCERTAIN effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as STATES HAVE MADE CLEAR THEIR PLANS TO REDUCE THE POPULATION, including TROPHY HUNTS! Management of grizzly bears outside of the national parks would be left compl historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prev other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>PLEASE PROTECT YELLOWSTONE GRIZZLIES until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Katherine Rosvall	Katherine	Rosvall	kbrosvall@gmail.com	3286 sugabush	vista	CA	92084	4/10/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>ARE THE SUPPOSED "PROTECTIVE" ENTITIES MEANT TO HELP PRESERVE AND PROTECT OUR PLANET'S MOST IMPORTANT RESOURCE--BEARS,.WOLVES, COYOTES, ETC.THAT KEEP THE GRAZERS/DESTROYERS OF THE GRASSLAND?</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Visitors spend millions of dollars in the r local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure</p>

Kenneth Able	Kenneth	Able	kennethpable@gmail.com	535-000 Little Valley Rd	McArthur	CA	96056	3/3/2016	<p>I am strongly opposed to this proposal. It is not supported by the best available science with regard to grizzly bear populations and is (another) complete abdication of USFWS responsibility to protect threatened and endangered species. Grizzly populations in the northern R facing many threats that are likely to increase over time. One might make a case that the bears in the immediate Yellowstone area are doing okay, but it has hardly increased in the past decade, faces serious challenges brought on by climate change, and human-induced mort itself now occupies only a tiny fraction of its former range.</p> <p>What is needed is continuing rigorous protection of grizzly bears in the hope that currently isolated populations will slowly expand and make contact with one another. Only federal protection can provide any hope that this might happen. To propose turning management of ludicrous. The result will be another debacle like what has happened with the gray wolf. Do you really want that? Is it appropriate to have trophy hunting of an apex predator with a reproductive rate like that of the grizzly? Given the irrational anti-predator mania that curre northern Rockies, to contemplate handing over protection and management of grizzly bears to them would be nothing less than criminally irresponsible.</p> <p>Please pay attention to what the biology tells you and act responsibly in this matter.</p> <p>Kenneth P. Able McArthur, California</p>

Kent Newman	Kent	Newman	kentnew1@earthlink.net	2950 Washtenaw Rd Apt 2B	Ypsilanti	MI	48197	3/3/2016	<p>Please postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list, does preserve the progress made toward bear recovery. In fact, and it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most remarkable species. It is sacred by native communities, for thousands of years in the west, the majestic grizzly is now a treasured symbol of our wild heritage. Tourists spend millions of dollars in many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for all the region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought</p> <p>Although, grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 states. They reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the population has stopped since the early 2000s. There was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs. States have made clear their plans to significantly reduce the limited population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years without review, allowing for potentially irreversible damage, and would allow elimination of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; and may not link up with other populations, far away. People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility toward the bears. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to assure their recovery. Thank you for your consideration.</p>

Kim Young	Kim	Young	kimsings3@yahoo.com	1040 Big Tom Rd	Kim	TN	37082	3/4/2016	<p>I am writing to urge you, to plead with you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list totally fails to preserve the progress made toward bear recovery. In fact, it will reverse it and we cannot allow that to happen!!!</p> <p>I lived in NW Montana in and around the Flathead and Mission valleys for about 28 years and have followed the grizzly recovery with keen interest. In all that time, even with spending a lot of time in the woods and mountains, I only saw 2 grizzlies in those 28 years, and one of them was on the East shore of Flathead Lake.</p> <p>The Greater Yellowstone grizzly bear is by far one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. This heritage MUST absolutely be preserved. Millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly!!! I have always hoped to see a grizzly in Yellowstone but it never happened. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought so long and hard to save them. Please do NOT delist the grizzly!!!</p> <p>While grizzlies have made a bit of a comeback, their recovery is still a very delicate and very uncertain effort as you well know!! Grizzly bears occupy less than 2% (2%!!) of their historic range in the lower 48 and reproduce VERY slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of the population has stalled since the early 2000s, and there was a 6% decline last year. So, how can you even begin to say that they are recovered??</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Trophy hunts for grizzlies would be a terrible mistake!! Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated-- further limiting their range and numbers could prevent them from ever connecting to other grizzly populations. You know all these facts and I would think you would want to truly protect the grizzly from further population reductions. Delisting them is certainly NOT the answer!!!</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced POLITICAL hostility towards these magnificent and beloved creatures. PLEASE protect Yellowstone and Glacier grizzlies until there are adequate plans in place at the state level to and ensure, not endanger, their true recovery. True recovery has NOT been reached by a long shot! Complete protection is simply the correct thing to do, please do NOT delist the grizzly!! Thank you!</p>
Carolyn Kinsley	Carolyn	Kinsley	kinsleyc@nehalemtn.net	38145 Reed Rd	Nehalem	OR	97131	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered-species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the West, the majestic grizzly has become a symbol of our wild heritage. Visitors spend millions of dollars in the region every year, to visit Yellowstone National Park in the hopes of spotting a grizzly. The loss of the grizzly would be a loss for the entire region and a disservice to the wildlife professionals, dedicated conservationists, and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% per cent of their historic range in the lower 48 and reproduce very slowly, at a rate of only one to three cubs every few years. In the Yellowstone region, the growth of the population has stalled since the early 2000s, and there was a 6% per cent decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage and would allow eradication of bears in some areas. Kathryn Dorn	Kathryn	Dorn	kmdorn@mail.usf.edu	14309 Ravenwood Ln	Tampa	FL	33618	3/5/2016	Please do not delist the Greater Yellowstone grizzly bears from the Endangered Species List! Any recovery they've made owes mostly to the protection of the Endangered Species Act, and the Yellowstone population declined last year. This is absolutely the wrong time to remove the bears from the list due to humans' cowardice-induced violence. Our species has a horrible track record of trying to exterminate apex predators in our vicinity, and that is exactly what some states will attempt to do - probably with a great deal of success - if you delist the grizzlies. Yellowstone's ecosystem is dependent on the presence of apex predators to function healthily. Tourists come to Yellowstone and support the area's economy in their search for grizzly bears. There is no good argument in favor of delisting the grizzlies - allowing people to hunt them for entertainment or bragging rights doesn't even count as a reason to delist. Please protect the bears and apex predators and help them continue to expand back into their former range; please maintain their Endangered Species status!
James Shepherd	James	Shepherd	knightssirjames@msn.com	700 E Line St/POBox182	Geneva	IN	46740	4/10/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list FAILS to preserve the progress made toward bear recovery. In fact, it will REVERSE IT.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of the population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to poaching would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting with other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, leaving grizzlies hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p>
Leslie Roessler	Leslie	Roessler	kuykens@ptd.net	1942 Sycamore St	Bethlehem	PA	18017	3/4/2016	<p>I strongly urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, leaving grizzlies hostile to bears and other large carnivores. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>We plan to bring a friend from Slovenia to Yellowstone this summer. We hope we will get to see grizzly bears and wolves.</p>
Lloyd Johnston	Lloyd	Johnston	lajceoigthi@gmail.com	13421 26th Ave NE	Seattle	WA	98125	3/3/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the grizzly.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to the wild would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>I am curious about the rationale for delisting grizzlies or any other wild predator. Most anecdotes about predation on livestock have been shown to be exaggerations. Humans do not appear to be endangered by wild predators. On the other hand, wild predators are continually encroaching on their habitat and legal or illegal hunting. So this leads to the question: what (or who) is driving the decision(s) to delist wild predators?</p>

Larry Morra	Larry	Morra	lawmor36@yahoo.com	190 Cole Ave	Warwick	RI	02886	3/4/2016	<p>We Americans are seeing more and more a climate of indifference take hold within our society as the vastly wealthy 1% rs dominate our lives and system with their rule by the almighty dollar. So, then we get the apathy of the masses who figure, "what can I do about it all, ' the country?" We have such lack of moral restraint in this country now, that I believe if we don't make the necessary major changes to reverse the harm we are allowing to occur on a ramped up or the rampant pace, we will be living in a "hell on earth" scenario in the not too it's obvious to me that we need much more restraint and caution when it comes to removing any environmental protections that have taken decades to actually achieve the desired improvements to take effect! And, now if we allow regression on that front in any way, I believe impact on many levels, leading down the slippery slope once again toward extinction of species and environmental imbalances that if allowed to happen again, we may not have a next time to make another slow recovery, especially with the way our political system seems to place and as is! Thank you very much for your forthright and wise decision. Larry Morra</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Lawrence Rosin	Lawrence	Rosin	lawrencerosin@yahoo.com	601 Surf Ave	Brooklyn	NY	11224	3/7/2016	<p>You must not remove Yellowstone grizzlies from the endangered species list. According to the Sierra Club, being on the endangered species list has protected Yellowstone grizzlies from becoming extinct when they were really close to it. That means that if you remove the endangered species list, they'll likely become extinct eventually.</p> <p>The same organization also says Yellowstone grizzlies "[are] crucial to the health of wildlife in the ...Yellowstone region."</p> <p>So without Yellowstone grizzlies some animal populations will overpopulate, and will starve due to too much competition for resources such as food. Yellowstone grizzlies are necessary for things like that.</p>

Lee Baldwin	Lee	Baldwin	lbaldwin@jensonusa.com	11532 Liggett St	Norwalk	CA	90650	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>Grizzly Bears have NOT MADE ANY COMEBACK! The first time I went to Yellowstone just to see a Grizzly Bear there were over 1600 of them. Now-not so many. How could anybody say that is a comeback? I spend lots of money every year to go to Yellowstone for a photograph. Like many visitors, if the Grizzly Bear population declines so will my visits and MONEY. Lots of people will not want to spend money to come to a place that has killed off the wild Grizzly Bear.</p> <p>Now let's get to the reason for all this. It is paid for hunt clubs and organizations that want to charge 'hunters' money to kill a Grizzly Bear. Tell the damn truth. These organizations will stand at the ready, at the boundaries of the National Park just waiting for a bear to put a paw in Africa to a beloved Lion whom was lured over the boundary line. What is to keep that from happening to Grizzly Bears?</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would be hostile to bears and other large carnivores. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to aid in their recovery.</p>
Leo J Blackman	Leo J	Blackman	leo@leoblackman.com	74 Old Route 22	Wassaic	NY	12592	3/3/2016	<p>Americans have proven themselves unable to understand the most basic science, so leaving the protection of these animals to local authorities will be based on whining from ranchers about their livestock and from residents about their safety. Then they'll likely take over Yellowstone and over the bears, waving their AK-47's and carrying "don't tread on me" banners. Please postpone de-listing of the Yellowstone grizzly bear population from the endangered species list. We humans will drive them to the edge of extinction, just like the bison and Indians. You can't have it both ways. Please protect the progress made towards their recovery. Don't blow it!</p>
Leonard Ginsburg	Leonard	Ginsburg	leonardo@productionrobotics.com	2222 Stuart St	Berkeley	CA	94705	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. It is a really stupid idea.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of grizzlies in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which have historically been hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunters who will not be able to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Leslie Lund	Leslie	Lund	leslielund@hotmail.com	139 E. 13th St. 4A	New York	NY	10003	4/13/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. Opening the pop them to the unethical practices that hunters employ: killing bears from the air in helicopters, trapping which is barbaric and inhumane, and, the risk of cubs being orphaned and left to fend for themselves which they are unlikely to do without their mothers. Look to the Appala record number of cubs this year, since food supplies were down and deaths of their parents were up in 2015-16. Many of the cubs were severely underweight and lacked enough strength to even resist being rescued. Many had witnessed their mother's and siblings deaths. Is t future, one marked by violence against other creatures/ In Montana and Wyoming, the Grizzly is a spirit animal for the Indigenous peoples there. By de-listing the Grizzly, you enable trophy hunters to further humiliate and degrade the belief systems of the first Americans. H saddening, this is a blow to indigenous children trying to go forward in a world that cares and respects them.</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure, not endanger, their true recovery.</p>
Nancy Lowell	Nancy	Lowell	lilyofthefield@tampabay.rr.com	11717 North Dr	Tampa	FL	33617	4/13/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. Every time you fail to protect the species begins to suffer unsustainable losses (see Idaho, Wyoming, and Alaska wolves) due to fear and anti-predator attitudes. So, can we please not do this to the Yellowstone bears?</p> <p>The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations to keep their gene pool strong and healthy.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>Do NOT delist Yellowstone's grizzlies just because trophy hunters want to kill them. That is NOT sound science, it is pandering to special interests. Grizzlies are not overpopulated. Leave them alone. Any human that was killed by a Yellowstone grizzly in the last few years did not follow the rules like not hiking alone and staying away from a sow with cubs. Don't kill the grizzlies just because some humans refuse to follow the rules in bear country. Yellowstone is a sanctuary for our fast disappearing native species. They need to be preserved for future generations. Please don't let low-life trophy hunters wall. Leave OUR grizzlies alone! Same with our bison, wolves and other native wildlife. They belong to the people of America--not some government agency.</p>

Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>Thank you.</p>
Lin David	Lin	David	linnie511@verizon.net	9 Thurber Blvd	Smithfield	RI	02917	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p> <p>After the wolves were killed off in Yellowstone, lots of the land, rivers, wildlife, etc., went out of control. Having been one of the top predators, the wildlife that graze on the grasses became over populated & did much to cause many negative changes. It was not until they reintroduced the population of the deer, elk & other grazing creatures came down, causing the land to return to how it had been prior to their murders. The ecology is now what it should be & if these bears, the other top predators, are killed off, as the wolves were, there will be negative consequences. We have seen this before, following the return of the wolves. Quit playing with lives, nature & the reason these predators were put on this planet, & where they are supposed to be. It's time to quit playing God, when we have the One who created ALL, & the reasons He put them on this planet. Thank you for not killing off the bears. It's wrong to change what was & is meant to be.</p>
Elizabeth Cook	Elizabeth	Cook	liztbird@yahoo.com	12110 W 71st St	Shawnee Mission	KS	66216	4/12/2016	<p>There is no reason to change the rules for the Yellowstone bears so why are you planning to do it? They are one of the main tourist attractions in Yellowstone but hunters would get a big thrill from killing one. How much is their big thrill worth? I suggest they get their thrill from watching innocent animals.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. They tried to relocate him but the 400 # youngster kept coming back. No side has been hurt. So as the story goes we were in need of a bear in Duluth, MN. The trip was made and Trouble has been a great part of our zoo. Great with his husbandry training and has a good life.</p> <p>Our Zoo is undergoing plans for restructuring and the Brown Bear/Grizzly exhibit will be new and exciting. Bears in the wild are much better, but obviously Trouble wasn't doing very well in the wild. So he has a place here in Duluth, MN></p> <p>Thank you,</p> <p>Sincerely,</p> <p>Leona Krieg</p>

The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which have historical carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to trophy hunters who want between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Linda Baumann	Linda	Baumann	lmbaumann@hotmail.com	2323 Catalina Dr	Davis	CA	95616	4/12/2016	<p>Grizzly bears, like the rest of life on this planet, are being threatened by climate change. As governments excruciatingly slowly introduce changes to our dependence on fossil fuels, the planet is warming. Bark beetles are surviving the warmer winters, damaging pine trees, and cones that are an important food source for grizzlies. These creatures have enough difficulty surviving the changes to their habitat to face culling by hunters.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect it.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which are hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting, the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery.</p>
Laurie Ollhoff	Laurie	Ollhoff	lollhoff@charter.net	16588 Fieldcrest Ave	Farmington	MN	55024	4/19/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the reg local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting with other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Thank you for your time and attention.</p>

Lynda Long-Fainter	Lynda	Long-Fainter	lyndi_dl1@yahoo.com	P O Box 6835	Rock Island	IL	61204	3/4/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>Every time I turn around, I find that the US Fish and Wildlife has delisted another wildlife species from the Endangered Species Act, and it makes my blood boil! Have you people lost your rabid ass minds? YES! It certainly seems like it has! Once these extraordinary anir back. My serious concern is also the cubs that have lost their mothers due to hunters who have no ethics, moral conscience or moral obligation in keeping them safe and alive. Your actions lead me to believe that this is an evil move on the part of people who lack any sort o listening to the people who keep statistics on the population growth of our wildlife in national parks? It leads me to believe that \$\$\$\$ are controlling your judgement not your conscience in protecting wildlife -- and I know I'm right on this issue! Stop destroying wildlife!</p> <p>Since I am a voter and a taxpayer, I have a right to oppose this proposal. I also own the national parks and the wildlife in them, I ABSOLUTELY OPPOSE THIS PROPOSAL! I oppose this proposal because of the cubs who need their mothers! The Greater Yellowstone grizzly bear is one of the United States? most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Lynne Fischer	Lynne	Fischer	lynneafischer@gmail.com	72 E. Saddleback Mesa	Santa Fe	NM	87508	4/27/2016	<p>Grizzlies are a keystone animal in this ecosystem and you know that it's collapse will collapse the system. Why would you let that happen?!</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth of the population in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. A female bear cannot replace herself once in ten years. We need to protect the great bear for our future generations.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Julie Moore	Julie	Moore	majikone_47@yahoo.com	812 NE 86th st.	Vancouver	WA	98665	4/10/2016	<p>I am writing to urge you to stop delisting of the Yellowstone grizzly bear population. Marco De La Rosa	Marco	Mitchell	marco_de_la_rosa@hotmail.com	12700 NE 124th St.	Kirkland	WA	98034	4/12/2016	<p>I am writing to urge you to POSTPONE de-listing of the Yellowstone Grizzly Bears. The proposal to remove Yellowstone Grizzly Bears from the Endangered Species List fails to preserve the progress made toward bear recovery. In fact, it will REVERSE it.</p> <p>The Greater Yellowstone Grizzly Bear is one of the USA's most iconic species. Held sacred by Native American communities for thousands of years in the West, the majestic Grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the many local economies, in the hopes of spotting a magnificent grizzly. The loss of the Grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and UNCERTAIN effort. Grizzly Bears occupy less than 2% of their historic range in the Lower 48 States and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, grizzly recovery has stalled since the early 2000s, and there was a 6% decline in 2015.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would be hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations. People and bears CAN co-exist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region. Please protect Yellowstone Grizzlies until there are adequate plans in place at the state level to ensure (not endanger) their true recovery.</p>
Maren Cooke	Maren	Cooke	maren.cooke@gmail.com	6745 Forest Glen Rd	Pittsburgh	PA	15217	3/4/2016	<p>I am writing to urge you to prevent the delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list not only fails to preserve the halting progress made toward bear recovery, it will reverse it and cancel all the efforts to date.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by Native communities for thousands of years, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region every year to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made something of a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, grizzly recovery has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would be hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other populations. People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until and unless there are adequate plans in place at the state level to ensure their recovery.</p>

We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>Please continue to protect the Yellowstone grizzlies. Reducing the number of any species in a balanced ecosystem can cause major problems for the entire ecosystem in that area. Just because they are finally improving their situation and are no longer in danger of extinction does not mean they are safe from danger. To allow hunting could put them back on the endangered special list, maybe too late.</p>

Visitors spend millions of dollars in the regional economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to trophy hunting would tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>One final thought: We have no measurable effective gun control keeping guns out of the hands of criminals in this country. Illegal rampant killing of wildlife is even more out of control. Please take a stand. Leave these animals protected.</p>

Mark Ode	Mark	Ode	markeode@gmail.com	3116 Glenview Avenue	Royal Oak	MI	48073	3/3/2016	<p>Please postpone the delisting of the Yellowstone grizzly bear population. This proposal will reverse the strides that have been made and harm this treasured symbol. Wildlife brings in millions of dollars from wildlife enthusiasts every year. .</p> <p>Based on the latest science Grizzlies cover only a small percentage of their original range and have a very slow reproductive rate with the population declining over the past few years. Allowing trophy hunting will push this species back to the brink in addition to it being un</p> <p>Revoking their listing will open the door to their slaughter based on so-called 'management'</p> <p>People and bears can coexist. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the regional local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>I'd like my grandchildren to be able to see them like I did on my tour of Yellowstone.</p>

Mary Hebblewhite	Mary	Hebblewhite	maryhebblewhite@msn.com	3005 River North Pkwy	Atlanta	GA	30328	4/24/2016	<p>We say emphatically, please at least postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them. We are prone to delist too soon! Grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone population has stalled since the early 2000s, and there was a 6% decline last year.</p> <p>States have announced plans to reduce the population, including through trophy hunts. By this delisting, grisly management outside national parks would be left up to the states, states which have been hostile to protection of bears and other large carnivores. Rather shocking! states to EXCEED maximum bear deaths for YEARS before any review, allowing for potentially irreversible damage. ALSO, the plan would allow COMPLETE eradication of bears in some areas. With already reduced range, this is folly. The loss of female grizzlies to trophy hunting the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone. People who visit Yellowstone love it in part for wildlife...the Griz is a trademark for Yellowstone.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p> <p>Drs. Paul Davidson and Mary Hebblewhite Sandy Springs GA Frequent Western Park Visitors, hikers, paddlers, for 30 years. For our 5 kids and 8 grandkids' American heritage.</p>

Management of grizzly bears outside of the national parks would be left completely up to the states, whic bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellows</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Matthew Magallanes	Matthew	Magallanes	matt.magallanes@southernland.com	514 Ardmore Pl	Franklin	TN	37064	4/12/2016	<p>In my view, you must take a position of protecting and helping wildlife prosper first, and then set them up for the kill for light entertainment of people. I am writing to urge you to postpone, or perhaps NEVER delisting of the Yellowstone grizzly bear population. The proposal from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region's local economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth began in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting to other populations.</p> <p>People and bears can coexist. Mark Bartleman	Mark	Bartleman	mbartleman@cox.net	1984 Del Mar Ave	Laguna Beach	CA	92651	3/3/2016	<p>I urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it may well reverse it.</p> <p>The Greater Yellowstone grizzly bear has been held sacred by native communities for thousands of years in the west, and the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the region every year, a vital part of many local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of grizzlies would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery still appears to be a delicate and uncertain effort. Grizzly bears occupy less than 2-percent of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has stalled since the early 2000s, and there was actually a 6-percent decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies vulnerable, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which leaves bears and other large carnivores. But the current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to a trophy hunt to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. And the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. Please don't let bears slide back towards extinction because of misplaced political hostility. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery. Thank you.</p>

The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
meg rhodes	meg	rhodes	megrhodes6@gmail.com				22947	3/21/2016	<p>Protect these wonderful bears !!!!!!!!!!!!!!!</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region's local economies, to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth began in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzlies.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>

Meredith Wilson	Meredith	Wilson	merwil@att.net	7136 Westminster Drive	Indianapolis	IN	46256	4/12/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. The Greater Yellowstone grizzly bear that deserves extra protection for all of its natural inhabitants. It is the one BEST natural place left in the continental U.S. to save for our children and grandchildren. I am sure that commercial interests and trophy hunters would love to get their hands into this area, and I suspect they will delist the bears. By delisting, I suspect trophy hunters and those who would assist them would go right to the edge of Yellowstone National Park (without being technically inside it) and lure bears across the Park boundary so that they could then kill them. Don't lose the progress we've made.</p> <p>Meredith Wilson Member --TU, IFF, NRDC, EarthJustice, Sierra Club, The Nature Conservancy</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery. Michele Kitts</p>

Michelle Bilodeau-Lanne	Michelle	Bilodeau-Lanne	michellelanne@yahoo.com	21 Fenimore Pl	Gansevoort	NY	12831	4/11/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. These Bears are climate change; we need to do all we can now to grow the population and expand their range.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. Visitors spend millions of dollars in the regional economies, in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to save them.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-2 cubs every few years. In the Yellowstone region, the growth in the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would leave bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow complete eradication of bears in some areas. The loss of female grizzlies to tell the difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population remains isolated; further limiting their range and numbers could prevent them from ever connecting.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. The end result of this proposal will be fewer bears limited to an even smaller portion of the Yellowstone region.</p> <p>Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure, not endanger, their true recovery.</p>
Michelle Matel	Michelle	Matel	michellematel@yahoo.com				8844	3/24/2016	<p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it. With so many of the Greater Yellowstone region, it is foolish to take what may be an irreversible action for the benefit of a few hunters.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Cheryl Mitchell	Cheryl	Mitchell	milawoff@aol.com				99205	3/11/2016	<p>I am an attorney in Spokane, Washington. I am a former chairperson of the Washington State Bar Association's Animal Law Section. My comments are my own and do not represent the views of either the Bar Association or the Animal Law Section.</p> <p>Governmental agencies are really good at spending millions of taxpayer dollars to kill animals, but plead poverty when it comes to taking any steps to protect animals. Based on many years of experience in dealing with both state and federal agencies, I know that in many cases, contempt--especially when it comes to matters involving animals. Fish and wildlife agencies (including the United States Fish and Wildlife Services) are no friends of wildlife. Many employees seem to enjoy killing animals. Apparently, it's all about the money. A three-part series in the Sacramento Bee called the U.S. Fish and Wildlife Service a killing agency.</p> <p>I am writing to urge you to postpone delisting of the Yellowstone grizzly bear population. The proposal to remove Yellowstone grizzly bears from the endangered species list fails to preserve the progress made toward bear recovery. In fact, it will reverse it.</p> <p>The Greater Yellowstone grizzly bear is one of the United States' most iconic species. Held sacred by native communities for thousands of years in the west, the majestic grizzly has become a treasured symbol of our wild heritage. . Visitors spend millions of dollars in the region to visit Yellowstone National Park in the hopes of spotting a magnificent grizzly. The loss of the grizzly would be a loss for the entire region, and a disservice to the wildlife professionals, dedicated conservationists and wildlife advocates who have fought to protect the bear.</p> <p>While grizzlies have made a comeback, their recovery is still a delicate and uncertain effort. Grizzly bears occupy less than 2% of their historic range in the lower 48 and reproduce very slowly, at a rate of only 1-3 cubs every few years. In the Yellowstone region, the growth has been slow since the early 2000s, and there was a 6% decline last year.</p> <p>The proposed rule leaves Greater Yellowstone grizzlies in the crosshairs, as states have made clear their plans to significantly reduce the population, including through trophy hunts. Management of grizzly bears outside of the national parks would be left completely up to the states, which would be hostile to bears and other large carnivores. The current proposal would allow states to exceed maximum bear deaths for years before any review, allowing for potentially irreversible damage, and would allow eradication of bears in some areas. The loss of female grizzlies to poaching or difference between a male and female bear could cause a steep, quick decline before emergency action can be taken. Additionally, the Yellowstone grizzly population is isolated; further limiting their range and numbers could prevent them from ever connecting to other grizzly populations.</p> <p>People and bears can coexist. We should not let bears slide back towards extinction because of misplaced political hostility towards these magnificent and beloved creatures. Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to ensure their recovery. Clearly, there are many individuals in the U.S. Fish and Wildlife Service who believe their jobs are to kill animals and not to help them.</p>

Please protect Yellowstone grizzlies until there are adequate plans in place at the state level to and ensure their recovery.</p> <p>There is a real life reason why our grizzlies were put on the Endangered Species List. They are STILL ENDANGERED!!!! Leave our wildlife & wild places alone for Pete's sake!!!! This is a real no brainer people. There still aren't enough bears surviving yet to just take them off the list. Cubs need to be able to live long enough to be able to reproduce themselves, & then raise those cubs to reproduce also to adulthood. Why should certain people be the only one's to say to take them off the list?? Our wildlife belongs to us ALL, not just a few big shot people. Why should we have to let a few big shot people decide if we should have wildlife or not? Especially the general public. It's just a damn shame that those of us who want our wildlife & wild places to stay "wild" have to jump through hoops to even be heard, let alone have a say in those decisions too. The United States is supposed to belong to "we the people" not just a few big shot people. These issues too.</p>
